          <authentication-password>AUTH-PASSWORD</authentication-password>
          <privilege-type>des</privilege-type>
          <privilege-password>PRIV-PASSWORD</privilege-password>
        </config>
      </user>
    </users>
  </server>
</servers>
</snmp>
```

Command Syntax

```
snmp-server user WORD auth (md5|sha) encrypt AUTH-PASSWORD priv (des|aes) PRIV-
PASSWORD (vrf management|)
```

Configure user name

Use this attribute to create an SNMP server user.

Attribute Name: user-name

Attribute Type: string

Attribute Range: 5-32

Attribute Name: authentication-type

Attribute Type: enum (md5|sha)

Attribute Name: encryption-type

Attribute Type: enum (plain|encrypt)

Attribute Name: authentication-password

Attribute Type: string

Attribute Name: privilege-type

Attribute Type: enum (des|aes)

Attribute Name: privilege-password

Attribute Type: string

Netconf edit-config payload

```
<snmp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp">

Command Syntax

```

snmp-server user WORD (network-operator|network-admin|WORD) auth (md5|sha) AUTH-
PASSWORD priv (des|aes) PRIV-PASSWORD (vrf management|)

```

Configure user name

Use this attribute to create an SNMP server user.

This command is supported when following feature are enabled SNMP-AGENT feature,snmp version v3

Attribute Name: user-name

Attribute Type: string

Attribute Range: 5-32

Netconf edit-config payload

```

<snmp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp">
<servers xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp-server">

```

```
<server>
  <vrf-name>management</vrf-name>
  <config>
    <vrf-name>management</vrf-name>
  </config>
  <users xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp-server-extended">
    <user>
      <user-name>WORD</user-name>
      <config>
        <user-name>WORD</user-name>
      </config>
    </user>
  </users>
</server>
</servers>
</snmp>
```

Command Syntax

```
snmp-server user WORD (vrf management|)
```

Configure user type

Use this attribute to create an SNMP server user of specified type.

This command is supported when following feature are enabled SNMP-AGENT feature,snmp version v3

Attribute Name: user-type

Attribute Type: union

Netconf edit-config payload

```
<snmp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp">
  <servers xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp-server">
    <server>
      <vrf-name>management</vrf-name>
      <config>
        <vrf-name>management</vrf-name>
      </config>
      <users xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp-server-extended">
        <user>
          <user-name>WORD</user-name>
          <config>
            <user-name>WORD</user-name>
          </config>
          <user-type>network-operator</user-type> <!-- operation="delete"-->
        </user>
      </users>
    </server>
  </servers>
</snmp>
```

Command Syntax

```
snmp-server user WORD (network-operator|network-admin|WORD) (vrf management|)
```

Configure context name

Use this attribute to create an SNMP server context

Attribute Name: context-name

Attribute Type: string

Attribute Range: 1-32

Netconf edit-config payload

```
<snmp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp">
  <servers xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp-server">
    <server>
      <vrf-name>management</vrf-name>
      <config>
        <vrf-name>management</vrf-name>
      </config>
      <contexts xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp-server-extended">
        <context>
          <context-name>WORD</context-name>
          <config>
            <context-name>WORD</context-name>
          </config>
        </context>
      </contexts>
    </server>
  </servers>
</snmp>
```

Command Syntax

```
snmp-server context WORD (vrf management|)
```

Configure acl name

Use this attribute to create an SNMP community string and user-acl.

This command is supported when following feature are enabled SNMP-AGENT feature

Attribute Name: acl-name

Attribute Type: string

Netconf edit-config payload

```
<snmp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp">
  <servers xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp-server">
    <server>
      <vrf-name>management</vrf-name>
      <config>
```

```

        <vrf-name>management</vrf-name>
    </config>
    <communities xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp-server-extended">
        <community>
            <community-name>WORD</community-name>
            <config>
                <community-name>WORD</community-name>
            </config>
            <acl-name>WORD</acl-name> <!-- operation="delete"-->
        </community>
    </communities>
</server>
</servers>
</snmp>

```

Command Syntax

```
snmp-server community WORD use-acl WORD (vrf management|)
```

Configure community name

Use this attribute to create an SNMP community string and access privileges.

This command is supported when following feature are enabled SNMP-AGENT feature

Attribute Name: community-name

Attribute Type: string

Attribute Range: 1-32

Netconf edit-config payload

```

<snmp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp">
  <servers xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp-server">
    <server>
      <vrf-name>management</vrf-name>
      <config>
        <vrf-name>management</vrf-name>
      </config>
      <communities xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp-server-extended">
        <community>
          <community-name>WORD</community-name>
          <config>
            <community-name>WORD</community-name>
          </config>
        </community>
      </communities>
    </server>
  </servers>
</snmp>

```

Command Syntax

```
snmp-server community WORD (vrf management|)
```

Configure snmp group

Use this attribute to create an SNMP community string with group.

This command is supported when following feature are enabled SNMP-AGENT feature

Attribute Name: snmp-group

Attribute Type: enum (network-operator|network-admin)

Netconf edit-config payload

```
<snmp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp">
  <servers xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp-server">
    <server>
      <vrf-name>management</vrf-name>
      <config>
        <vrf-name>management</vrf-name>
      </config>
      <communities xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp-server-extended">
        <community>
          <community-name>WORD</community-name>
          <config>
            <community-name>WORD</community-name>
          </config>
          <snmp-group>network-operator</snmp-group> <!-- operation="delete"-->
        </community>
      </communities>
    </server>
  </servers>
</snmp>
```

Command Syntax

```
snmp-server community WORD group (network-operator|network-admin) (vrf management|)
```

Configure access privileges

Use this attribute to create an SNMP community string and access privileges.

This command is supported when following feature are enabled SNMP-AGENT feature

Attribute Name: access-privileges

Attribute Type: enum (ro)

Netconf edit-config payload

```
<snmp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp">
  <servers xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp-server">
    <server>
      <vrf-name>management</vrf-name>
```

```

    <config>
      <vrf-name>management</vrf-name>
    </config>
    <communities xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp-server-extended">
      <community>
        <community-name>WORD</community-name>
        <config>
          <community-name>WORD</community-name>
        </config>
        <access-privileges>ro</access-privileges> <!-- operation="delete"-->
      </community>
    </communities>
  </server>
</servers>
</snmp>

```

Command Syntax

```
snmp-server community WORD (ro) (vrf management|)
```

Configure access

Use this attribute to set access privileges to this community view.

This command is supported when following feature are enabled SNMP-AGENT feature

Attribute Name: access

Attribute Type: enum (ro)

Attribute Name: community-view-name

Attribute Type: string

Attribute Name: version

Attribute Type: enum (v1|v2c)

Netconf edit-config payload

```

<snmp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp">
  <servers xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp-server">
    <server>
      <vrf-name>management</vrf-name>
      <config>
        <vrf-name>management</vrf-name>
      </config>
      <communities xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp-server-extended">
        <community>
          <community-name>WORD</community-name>
          <config>
            <community-name>WORD</community-name>
            <community-view-name>VIEW-NAME</community-view-name> <!-- operation="delete"-->
            <version>v1</version> <!-- operation="delete"-->

  </server>
</servers>
</snmp>

```

Command Syntax

```
snmp-server group WORD version (3) (auth|priv|noauth) context <1-32> (all) (vrf
management|)
```

debug snmp-server

Netconf RPC payload

```
<snmp-server-terminal-debug-on xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-
snmp-server-extended"/>
```

Command Syntax

```
debug snmp-server
```

no debug snmp-server

Netconf RPC payload

```
<snmp-server-terminal-debug-off xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-
snmp-server-extended"/>
```

Command Syntax

```
no debug snmp-server
```

IPI-LDP

Configure multicast hello disable

This attribute enable multicast hello exchange on all interfaces enabled for LDP. This is used for autodiscovery of LDP peers on directly connected networks. This option is enabled by default.

Attribute Name: multicast-hello-disable

Attribute Type: uint8

Netconf edit-config payload

```
<ldp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ldp">
  <global>
    <config>
      </multicast-hello-disable><!-- operation="delete"-->
    </config>
  </global>
</ldp>
```

Command Syntax

```
no multicast-hellos
```

Configure ldp instance

This command is used to enter the LDP specific command-line mode in which global attributes for the LDP process can be set. Without this command, the LSR does not perform any LDP operations, such as sending hello packets.

Attribute Name: ldp-instance

Attribute Type: enum (ldp)

Netconf edit-config payload

```
<ldp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ldp">
  <global>
    <config>
      <ldp-instance>ldp</ldp-instance>
    </config>
  </global>
</ldp>
```

Command Syntax

```
router (ldp)
```

Configure router identifier

This attribute sets the router-id to the supplied IP address; the router uses this address to generate the LDP-ID

Attribute Name: router-identifier

Attribute Type: inet:ipv4-address

Netconf edit-config payload

```
<ldp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ldp">
  <global>
    <config>
      <router-identifier>A.B.C.D</router-identifier> <!-- operation="delete"-->
    </config>
  </global>
</ldp>
```

Command Syntax

```
router-id A.B.C.D
```

Configure pseudowire status tlv

This attribute enables the use of the PW Status TLV to signal the pseudowire status

Attribute Name: pseudowire-status-tlv

Attribute Type: boolean

Default Value: false

Netconf edit-config payload

```
<ldp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ldp">
  <global>
    <config>
      <pseudowire-status-tlv>true</pseudowire-status-tlv> <!-- operation="delete"-->
    </config>
  </global>
</ldp>
```

Command Syntax

```
pw-status-tlv
```

Configure rlfa ilm optimization

This attribute enables the rlfa ilm optimization

Attribute Name: rlfa-ilm-optimization

Attribute Type: boolean

Default Value: false

Netconf edit-config payload

```
<ldp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ldp">
  <global>
    <config>
      <rlfa-ilm-optimization>true</rlfa-ilm-optimization> <!-- operation="delete"-->
    </config>
  </global>
</ldp>
```

Command Syntax

```
rlfa-ilm-optimization
```

Configure advertise label for default route

Advertise the label for default route.

Attribute Name: advertise-label-for-default-route

Attribute Type: empty

Netconf edit-config payload

```
<ldp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ldp">
```

```
<global>
<config>
  </advertise-label-for-default-route><!-- operation="delete"-->
</config>
</global>
</ldp>
```

Command Syntax

```
advertise-label-for-default-route
```

Configure import bgp routes

This attribute is used to import BGP routes into LDP. BGP routes are not imported into LDP by default. Use the no parameter to flush out all BGP routes currently being used by LDP, and to reject any further BGP specific routing updates from ZebOS-XP.

Attribute Name: import-bgp-routes

Attribute Type: boolean

Default Value: false

Netconf edit-config payload

```
<ldp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ldp">
<global>
<config>
  <import-bgp-routes>true</import-bgp-routes> <!-- operation="delete"-->
</config>
</global>
</ldp>
```

Command Syntax

```
import-bgp-routes
```

Configure ldp optimization

This command helps optimize the resetting of an LDP session by enabling the two scalability features for LDP. It Resets the session keepalive timer on receipt of a hello message and Resets the hold timer on receipt of any LDP control message.

Attribute Name: ldp-optimization

Attribute Type: boolean

Default Value: false

Netconf edit-config payload

```
<ldp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ldp">
<global>
<config>
  <ldp-optimization>true</ldp-optimization> <!-- operation="delete"-->
</config>
</global>
```

```
</ldp>
```

Command Syntax

```
ldp-optimization
```

Configure explicit null

This attribute is used to configure the router to send explicit-null labels for directly connected FECs instead of implicit-null labels. Implicit-nulls are the default labels.

Attribute Name: explicit-null

Attribute Type: boolean

Default Value: false

Netconf edit-config payload

```
<ldp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ldp">
  <global>
    <config>
      <explicit-null>true</explicit-null> <!-- operation="delete"-->
    </config>
  </global>
</ldp>
```

Command Syntax

```
explicit-null
```

Configure global merge

This attribute is used to override the default merge capability setting of all the interfaces for the current LSR. The merge capability aggregates multiple incoming flows with the same destination address into a single outgoing flow.

Attribute Name: global-merge

Attribute Type: enum (merge-capable|non-merge-capable)

Default Value: merge-capable

Netconf edit-config payload

```
<ldp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ldp">
  <global>
    <config>
      <global-merge>merge-capable</global-merge> <!-- operation="delete"-->
    </config>
  </global>
</ldp>
```

Command Syntax

```
global-merge-capability (merge-capable|non-merge-capable)
```

Configure propagate release

This attribute is used to propagate the release of labels to downstream routers

Attribute Name: propagate-release

Attribute Type: boolean

Default Value: false

Netconf edit-config payload

```
<ldp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ldp">
  <global>
    <config>
      <propagate-release>true</propagate-release> <!-- operation="delete"-->
    </config>
  </global>
</ldp>
```

Command Syntax

```
propagate-release
```

Configure control mode

Use this attribute to override the default merge capability setting of all the interfaces for the current LSR. The merge capability aggregates multiple incoming flows with the same destination address into a single outgoing flow. This reduces the label-space shortage by sharing labels for different flows with the same destination, or the same FEC (Forwarding Equivalence Class). An LSR replies to a request packet from an LSR higher in the chain only after it receives a label from an LSR lower in the chain. Independent processing sets the mode to instant replies. In independent control mode, each LSR might advertise label mappings to its neighbors at any time. In independent downstream-on-demand mode, an LSR might answer requests for label mappings immediately, without waiting for a label mapping from the next hop. In independent downstream unsolicited mode, an LSR might advertise a label mapping for an Forwarding Equivalence Class (FEC) to its neighbors when ever it is prepared to label-switch that FEC. In independent mode, an upstream label can be advertised before a downstream label is received. In ordered control mode, an LSR may initiate the transmission of label mapping only for an FEC for which it has a label mapping for the FEC next hop, or for which the LSR is the egress. For each FEC for which the LSR is not the egress and no mapping exists, the LSR must wait until a label from a downstream LSR is received. An LSR may be an egress for some FECs and a non-egress for others. Changes in control mode only affect labels that were sent or received after the change was made.

Attribute Name: control-mode

Attribute Type: enum (independent|ordered)

Netconf edit-config payload

```
<ldp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ldp">
  <global>
    <label-management>
      <config>
        <control-mode>independent</control-mode> <!-- operation="delete"-->
      </config>
    </label-management>
  </global>
</ldp>
```

Command Syntax

```
control-mode (independent|ordered)
```

Configure retention mode

This attribute is used to set the retention mode to be used for all labels exchanged. When an LSR receives a label binding for a particular FEC (Forwarding Equivalence Class) from another LSR that is not its next hop for that FEC, it might keep track of such bindings or discard them. Use the liberal parameter to retain all labels binding to FEC received from label distribution peers, even if the LSR is not the current next-hop. Use the conservative parameter to maintain only the label bindings for valid next-hops in a LSP.

Attribute Name: retention-mode

Attribute Type: enum (liberal|conservative)

Netconf edit-config payload

```
<ldp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ldp">
  <global>
    <label-management>
      <config>
        <retention-mode>liberal</retention-mode> <!-- operation="delete"-->
      </config>
    </label-management>
  </global>
</ldp>
```

Command Syntax

```
label-retention-mode (liberal|conservative)
```

Configure advertisement mode

This attribute is used to set the label advertisement mode for all the interfaces for the current LSR. Specifying downstream-on-demand and downstream-unsolicited mode affects which LSR initiates mapping requests and mapping advertisements. This command is a global command used to set the label advertisement mode for all interfaces for the current LSR.

Attribute Name: advertisement-mode

Attribute Type: enum (downstream-unsolicited|downstream-on-demand)

Default Value: downstream-unsolicited

Netconf edit-config payload

```
<ldp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ldp">
  <global>
    <label-management>
      <config>
        <advertisement-mode>downstream-unsolicited</advertisement-mode> <!--
operation="delete"-->
      </config>
    </label-management>
  </global>
</ldp>
```

Command Syntax

```
advertisement-mode (downstream-unsolicited|downstream-on-demand)
```

Configure hello interval

Use this attribute set the hello interval to send the hello messages to peers

Attribute Name: hello-interval

Attribute Type: uint16

Default Value: 5

Attribute Range: 1-21845

Netconf edit-config payload

```
<ldp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ldp">
  <global>
    <timers>
      <config>
        <hello-interval>1</hello-interval> <!-- operation="delete"-->
      </config>
    </timers>
  </global>
</ldp>
```

Command Syntax

```
hello-interval <1-21845>
```

Configure hello holdtime

Use this attribute set the hello hold time as the time out value that the router waits before rejecting an adjacency

Attribute Name: hello-holdtime

Attribute Type: uint16

Default Value: 15

Attribute Range: 3-65535

Netconf edit-config payload

```
<ldp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ldp">
  <global>
    <timers>
      <config>
        <hello-holdtime>3</hello-holdtime> <!-- operation="delete"-->
      </config>
    </timers>
  </global>
</ldp>
```

Command Syntax

```
hold-time <3-65535>
```

Configure keepalive interval

Use this attribute to set the global value for the interval after which keep-alive packets are sent out

Attribute Name: keepalive-interval

Attribute Type: uint16

Default Value: 10

Attribute Range: 1-21845

Netconf edit-config payload

```
<ldp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ldp">
  <global>
    <timers>
      <config>
        <keepalive-interval>1</keepalive-interval> <!-- operation="delete"-->
      </config>
    </timers>
  </global>
</ldp>
```

Command Syntax

```
keepalive-interval <1-21845>
```

Configure keepalive timeout

Use this attribute to set the time period for which an LSR must wait for successive keep-alive messages from LDP peers

Attribute Name: keepalive-timeout

Attribute Type: uint16

Default Value: 30

Attribute Range: 3-65535

Netconf edit-config payload

```
<ldp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ldp">
  <global>
    <timers>
      <config>
        <keepalive-timeout>3</keepalive-timeout> <!-- operation="delete"-->
      </config>
    </timers>
  </global>
</ldp>
```

Command Syntax

```
keepalive-timeout <3-65535>
```

Configure request retry timeout

Use this attribute to set the interval between retries. Before this time is over, a request is re-sent to a peer. This command changes the interval between request messages that are resent to a peer to account for routing changes.

Attribute Name: request-retry-timeout

Attribute Type: uint16

Default Value: 5

Attribute Range: 1-65535

Netconf edit-config payload

```
<ldp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ldp">
  <global>
    <label-request-policy>
      <config>
        <request-retry-timeout>1</request-retry-timeout> <!-- operation="delete"-->
      </config>
    </label-request-policy>
  </global>
</ldp>
```

Command Syntax

```
request-retry-timeout <1-65535>
```

Configure request retry

Use this attribute to enable the retry of requests once a request for a label has been rejected for a valid reason. This command enables the LSR to send a maximum of five label requests if a label request is rejected by an LDP peer.

Attribute Name: request-retry

Attribute Type: boolean

Default Value: false

Netconf edit-config payload

```
<ldp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ldp">
  <global>
    <label-request-policy>
      <config>
        <request-retry>true</request-retry> <!-- operation="delete"-->
      </config>
    </label-request-policy>
  </global>
</ldp>
```

Command Syntax

```
request-retry
```

Configure label request policy ipv4

Use this attribute to send LDP Label Request Message for certain IPv4 FEC prefixes.

Attribute Name: label-request-policy-ipv4

Attribute Type: string

Netconf edit-config payload

```
<ldp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ldp">
  <global>
    <label-request-policy>
      <config>
        <label-request-policy-ipv4>NAME</label-request-policy-ipv4> <!--
operation="delete"-->
      </config>
    </label-request-policy>
  </global>
</ldp>
```

Command Syntax

```
request-labels-for prefix-list-ipv4 NAME
```

Configure label request policy ipv6

Use this attribute to send LDP Label Request Message for certain IPv6 FEC prefixes.

Attribute Name: label-request-policy-ipv6

Attribute Type: string

Netconf edit-config payload

```
<ldp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ldp">
  <global>
    <label-request-policy>
      <config>
        <label-request-policy-ipv6>NAME</label-request-policy-ipv6> <!--
operation="delete"-->
      </config>
    </label-request-policy>
  </global>
</ldp>
```

Command Syntax

```
request-labels-for prefix-list-ipv6 NAME
```

Configure loop detection enable

Use this attribute to enable loop detection on the current LSR. This command detects looping LSPs, and prevent Label Request messages from looping because of non-merge capable LSRs. This loop detection mechanism is useful for networks of non time-to-live (non TTL) decrementing devices that can not allocate resources among traffic flows.

Attribute Name: loop-detection-enable

Attribute Type: empty

Netconf edit-config payload

```
<ldp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ldp">
  <global>
    <loop-detection-policy>
      <config>
        </loop-detection-enable>
      </config>
    </loop-detection-policy>
  </global>
</ldp>
```

Command Syntax

```
loop-detection
```

Configure path vector limit

Use this attribute to set the loop detection vec (vector) count, which determines the maximum supported path vectors. This command sets the maximum supported path vectors for loop detection, which specifies the permitted path vector length. An LSR that detects a path vector has reached the maximum length behaves as if the containing message has traversed a loop. This command ensures that a loop is detected while establishing a label switched path before any data is passed over that LSP.

Attribute Name: path-vector-limit

Attribute Type: uint32

Default Value: 255

Attribute Range: 1-255

Netconf edit-config payload

```
<ldp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ldp">
  <global>
    <loop-detection-policy>
      <config>
        <path-vector-limit>1</path-vector-limit> <!-- operation="delete"-->
      </config>
    </loop-detection-policy>
  </global>
</ldp>
```

Command Syntax

```
loop-detection-path-vec-count <1-255>
```

Configure hop count limit

Use this attribute to set the loop detection hop count, which determines the maximum hop-count value. This command sets the maximum hop count value, which specifies the permitted maximum permitted hop-count. An LSR that detects a maximum hop count behaves as if the containing message has traversed a loop. The use of this command ensures that a loop is detected while establishing a label switched path before any data is passed via LSP

Attribute Name: hop-count-limit

Attribute Type: uint32

Default Value: 255

Attribute Range: 1-255

Netconf edit-config payload

```
<ldp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ldp">
  <global>
    <loop-detection-policy>
      <config>
        <hop-count-limit>1</hop-count-limit> <!-- operation="delete"-->
      </config>
    </loop-detection-policy>
  </global>
</ldp>
```

Command Syntax

```
loop-detection-hop-count <1-255>
```

Configure session protection enable

This attribute is used to activate adjacency session protection.

This command is supported when following feature are enabled LDP Session Protection feature

Attribute Name: session-protection-enable

Attribute Type: empty

Netconf edit-config payload

```
<ldp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ldp">
  <global>
    <session-protection>
      <config>
        </session-protection-enable>
      </config>
    </session-protection>
  </global>
</ldp>
```

Command Syntax

```
session-protection
```

Configure duration

Set adjacency session protection duration. Protection is infinite, it is not configured

This command is supported when following feature are enabled LDP Session Protection feature

Attribute Name: duration

Attribute Type: union

Attribute Name: session-protection-enable

Attribute Type: empty

Netconf edit-config payload

```
<ldp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ldp">
  <global>
    <session-protection>
      <config>
        </session-protection-enable><!-- operation="delete"-->
        <duration>infinite</duration> <!-- operation="delete"-->
      </config>
    </session-protection>
  </global>
</ldp>
```

Command Syntax

```
session-protection duration (infinite|<5-86400>)
```

Configure session protection prefix list name

This attribute is used to set adjacency prefixes for session protection.

This command is supported when following feature are enabled LDP Session Protection feature

Attribute Name: session-protection-prefix-list-name

Attribute Type: union

Attribute Name: session-protection-enable

Attribute Type: empty

Netconf edit-config payload

```
<ldp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ldp">
  <global>
    <session-protection>
      <config>
        </session-protection-enable><!-- operation="delete"-->
        <session-protection-prefix-list-name>none</session-protection-prefix-list-name>
      <!-- operation="delete"-->
    </config>
  </session-protection>
</global>
</ldp>
```

Command Syntax

```
session-protection for (none|WORD)
```

Configure duration

Set adjacency session protection duration. Protection is infinite, it is not configured

This command is supported when following feature are enabled LDP Session Protection feature

Attribute Name: duration

Attribute Type: enum (infinite)

Attribute Name: session-protection-enable

Attribute Type: empty

Attribute Name: session-protection-prefix-list-name

Attribute Type: enum (none)

Netconf edit-config payload

```
<ldp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ldp">
  <global>
    <session-protection>
      <config>
        </session-protection-enable><!-- operation="delete"-->
        <session-protection-prefix-list-name>none</session-protection-prefix-list-name>
      <!-- operation="delete"-->
        <duration>infinite</duration> <!-- operation="delete"-->
      </config>
    </session-protection>
  </global>
</ldp>
```

Command Syntax

```
session-protection for (none) duration (infinite)
```

Configure ldp

Use this attribute to enable the debugging of all LDP events.

Attribute Name: ldp

Attribute Type: bits (events|fsm|hexdump|dsm|usm|tsm|qos|nsm|advertise-labels|cspf|vc usm|vc dsm|graceful-restart|rib|packet notification|packet hello|packet initialization|packet keepalive|packet address|packet label|packet|all)

Netconf edit-config payload

```
<ldp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ldp">
  <debug>
    <config>
      <ldp>events</ldp> <!-- operation="delete"-->
    </config>
  </debug>
</ldp>
```

Command Syntax

```
debug ldp (events|fsm|hexdump|dsm|usm|tsm|qos|nsm|advertise-labels|cspf|vc usm|vc
  dsm|graceful-restart|rib|packet notification|packet hello|packet
  initialization|packet keepalive|packet address|packet label|packet|all)
```

Configure enable

Use this attribute with the enable option to enable Graceful Restart capability on a router. This is a global command. LDP decides whether or not to encode FT Session TLV in its initialization message for each session depending on this capability, but the restart capability of each session also depends on support for graceful restart at the peer router

This command is supported when following feature are enabled restart feature

Attribute Name: enable

Attribute Type: enum (full|helper-only)

Netconf edit-config payload

```
<ldp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ldp">
  <graceful-restart>
    <config>
      <enable>full</enable>
    </config>
  </graceful-restart>
</ldp>
```

Command Syntax

```
graceful-restart (full|helper-only)
```

Configure neighbor liveness time

Use this attribute to set the Neighbor-Liveness timer. The amount of time the LSR keeps its stale label-FEC (Forwarding Equivalence Class) bindings is set to the lesser of the Fault Tolerant (FT) Reconnect timeout and Neighbor-Liveness timer. This command sets the Neighbor-Liveness timer

This command is supported when following feature are enabled restart feature

Attribute Name: neighbor-liveness-time

Attribute Type: uint16

Default Value: 120

Attribute Range: 5-300

Netconf edit-config payload

```
<ldp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ldp">
  <graceful-restart>
    <config>
      <neighbor-liveness-time>5</neighbor-liveness-time> <!-- operation="delete"-->
    </config>
  </graceful-restart>
</ldp>
```

Command Syntax

```
graceful-restart timers neighbor-liveness <5-300>
```

Configure max recovery time

Use this attribute to set the maximum recovery time. If the LSR determines that the neighbor was able to preserve its MPLS forwarding state, the LSR should keep the stale label-FEC (Forwarding Equivalence Class) bindings for as long as the lesser of: the recovery time advertised by the neighbor and a local maximum recovery time. This command sets the maximum recovery time

This command is supported when following feature are enabled restart feature

Attribute Name: max-recovery-time

Attribute Type: uint16

Default Value: 120

Attribute Range: 15-600

Netconf edit-config payload

```
<ldp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ldp">
  <graceful-restart>
    <config>
      <max-recovery-time>15</max-recovery-time> <!-- operation="delete"-->
    </config>
  </graceful-restart>
</ldp>
```

Command Syntax

```
graceful-restart timers max-recovery <15-600>
```

Configure transport address ipv4

Use this attribute to configure the IPv4 transport address for a label space. The transport address is the address used for the TCP session over which LDP is running. Use this attribute to manually configure the transport address. Transport addresses may either be bound to a loopback interface, or to a physical interface that is bound to the label space in question. A transport address can also be manually configured using the CLI with the loopback address as the transport address.

Attribute Name: transport-address-ipv4

Attribute Type: inet:ipv4-address

Netconf edit-config payload

```
<ldp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ldp">
  <transport-addresses>
    <transport-address>
      <label-space-identifier>0</label-space-identifier>
      <config>
        <label-space-identifier>0</label-space-identifier>
      </config>
      <transport-address-ipv4>A.B.C.D</transport-address-ipv4> <!--
operation="delete"-->
    </transport-address>
  </transport-addresses>
</ldp>
```

Command Syntax

```
transport-address ipv4 A.B.C.D ((0)|)
```

Configure transport address ipv6

Use this attribute to configure an IPv6 transport address for a label space. The transport address is the address used for the TCP session over which LDP is running. Use this attribute to manually configure the transport address. Transport addresses may either be bound to a loopback interface, or to a physical interface that is bound to the label space in question. A transport address can also be manually configured using the CLI with the loopback address as the transport address. The CLI accepts only the loopback address to be configured as the transport address

Attribute Name: transport-address-ipv6

Attribute Type: inet:ipv6-address

Netconf edit-config payload

```
<ldp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ldp">
  <transport-addresses>
    <transport-address>
      <label-space-identifier>0</label-space-identifier>
      <config>
        <label-space-identifier>0</label-space-identifier>
      </config>
      <transport-address-ipv6>X:X::X:X</transport-address-ipv6> <!--
operation="delete"-->
    </transport-address>
  </transport-addresses>
</ldp>
```

Command Syntax

```
transport-address ipv6 X:X::X:X ((0)|)
```

Configure peer address

Use this attribute to configure neighbors of LDP for authentication.

This command is supported when following feature are enabled TCP MD5SIG encrypt password enabled

Attribute Name: peer-address

Attribute Type: union

Attribute Name: password-type

Attribute Type: enum (plain-text|encrypt)

Attribute Name: password

Attribute Type: string

Netconf edit-config payload

```
<ldp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ldp">
  <peer-authentication>
    <peer-authentication-lists>
      <peer-authentication-list> <!-- operation="delete"-->

```

```

    <peer-address>all</peer-address>
  <config>
    <peer-address>all</peer-address>
    <password-type>plain-text</password-type>
    <password>WORD</password>
  </config>
</peer-authentication-list>
</peer-authentication-lists>
</peer-authentication>
</ldp>

```

Command Syntax

```
neighbor (all|auto-targeted|A.B.C.D|X:X::X:X) auth md5 password (plain-
text|encrypt) WORD
```

Configure peer address

Use this attribute to exclude neighbors of LDP from authentication.

Attribute Name: peer-address

Attribute Type: inet:ip-address

Netconf edit-config payload

```

<ldp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ldp">
  <peer-authentication>
    <authentication-exclusions>
      <config>
        <peer-address>CML_IP_ADDR_T</peer-address>
      </config>
    </authentication-exclusions>
  </peer-authentication>
</ldp>

```

Command Syntax

```
neighbor (A.B.C.D|X:X::X:X) auth md5 password exclude
```

Configure group name

LDP Session group name.

Attribute Name: group-name

Attribute Type: string

Netconf edit-config payload

```

<ldp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ldp">
  <peer-authentication>
    <authentication-groups>
      <authentication-group> <!-- operation="delete"-->
        <group-name>NAME</group-name>
      </authentication-group>
    </authentication-groups>
  </peer-authentication>
</ldp>

```

```

        <group-name>WORD</group-name>
    </config>
</authentication-group>
</authentication-groups>
</peer-authentication>
</ldp>

```

Command Syntax

```
session-group name NAME
```

Configure prefix list

Peer authentication group prefix list.

Attribute Name: prefix-list

Attribute Type: string

Netconf edit-config payload

```

<ldp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ldp">
  <peer-authentication>
    <authentication-groups>
      <authentication-group>
        <group-name>NAME</group-name>
        <config>
          <group-name>WORD</group-name>
        </config>
        <prefix-list>NAME</prefix-list> <!-- operation="delete"-->
      </authentication-group>
    </authentication-groups>
  </peer-authentication>
</ldp>

```

Command Syntax

```
neighbor prefix-list NAME
```

Configure auth

Use this attribute to configure session-group authentication.

Attribute Name: auth

Attribute Type: enum (auth)

Attribute Name: password-type

Attribute Type: enum (plain-text|encrypt)

Attribute Name: password

Attribute Type: string

Netconf edit-config payload

```
<ldp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ldp">
```

```

<peer-authentication>
<authentication-groups>
<authentication-group>
  <group-name>NAME</group-name>
  <config>
    <group-name>WORD</group-name>
  </config>
</authentication-group>
<authentication-group-passwords>
<authentication-group-password> <!-- operation="delete"-->
  <auth>auth</auth>
  <config>
    <auth>auth</auth>
    <password-type>plain-text</password-type>
    <password>WORD</password>
  </config>
</authentication-group-password>
</authentication-group-passwords>
</authentication-group>
</authentication-groups>
</peer-authentication>
</ldp>

```

Command Syntax

```
(auth) md5 password (plain-text|encrypt) WORD
```

Configure prefix access control list name

Use this attribute to prevent the distribution of any locally assigned labels

Attribute Name: prefix-access-control-list-name

Attribute Type: string

Netconf edit-config payload

```

<ldp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ldp">
<label-mapping-access-lists>
<label-mapping-access-list>
  <prefix-access-control-list-name>WORD</prefix-access-control-list-name>
  <config>
    <prefix-access-control-list-name>WORD</prefix-access-control-list-name>
    <peer-access-control-list-name>WORD</peer-access-control-list-name>
  </config>
  <peer-access-control-list-name>WORD</peer-access-control-list-name>
</label-mapping-access-list>
</label-mapping-access-lists>
</ldp>

```

Command Syntax

```
advertise-labels for any to none
```

Configure prefix access control list name

Use this attribute to prevent the distribution of any locally assigned labels

Attribute Name: prefix-access-control-list-name

Attribute Type: string

Netconf edit-config payload

```
<ldp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ldp">
<label-mapping-access-lists>
<label-mapping-access-list>
  <prefix-access-control-list-name>WORD</prefix-access-control-list-name>
  <config>
    <prefix-access-control-list-name>WORD</prefix-access-control-list-name>
    <peer-access-control-list-name>WORD</peer-access-control-list-name>
  </config>
  <peer-access-control-list-name>WORD</peer-access-control-list-name>
</label-mapping-access-list>
</label-mapping-access-lists>
</ldp>
```

Command Syntax

```
advertise-labels for PREFIX to (any|PEER)
```

clear ldp statistics

Netconf RPC payload

```
<clear-ldp-statistics xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ldp"/>
```

Command Syntax

```
clear ldp statistics
```

clear ldp statistics advertise-labels

Netconf RPC payload

```
<clear-ldp-statistics-advertise-labels xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ldp"/>
```

Command Syntax

```
clear ldp statistics advertise-labels
```

clear ldp statistics advertise-labels for PREFIX

Attribute Name: prefix

Attribute Type: string

Netconf RPC payload

```
<clear-ldp-statistics-advertise-labels-prefix xmlns="http://www.ipinfusion.com/
yang/ocnos/ipi-ldp">
  <prefix>PREFIX</prefix>
</clear-ldp-statistics-advertise-labels-prefix>
```

Command Syntax

```
clear ldp statistics advertise-labels for PREFIX
```

clear ldp statistics advertise-labels for PREFIX to PEER

Attribute Name: prefix

Attribute Type: string

Attribute Name: peer

Attribute Type: string

Netconf RPC payload

```
<clear-ldp-statistics-advertise-labels-prefix-peer xmlns="http://
www.ipinfusion.com/yang/ocnos/ipi-ldp">
  <prefix>PREFIX</prefix>
  <peer>PEER</peer>
</clear-ldp-statistics-advertise-labels-prefix-peer>
```

Command Syntax

```
clear ldp statistics advertise-labels for PREFIX to PEER
```

clear ldp session *

Netconf RPC payload

```
<clear-ldp-session-all xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ldp"/>
```

Command Syntax

```
clear ldp session *
```

clear ldp session A.B.C.D

Attribute Name: addr

Attribute Type: inet:ipv4-address

Netconf RPC payload

```
<clear-ldp-session-ipv4 xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ldp">
  <addr>A.B.C.D</addr>
</clear-ldp-session-ipv4>
```

Command Syntax

```
clear ldp session A.B.C.D
```

clear ldp session X:X::X:X

Attribute Name: addr

Attribute Type: inet:ipv6-address

Netconf RPC payload

```
<clear-ldp-session-ipv6 xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ldp">
  <addr>X:X::X:X</addr>
</clear-ldp-session-ipv6>
```

Command Syntax

```
clear ldp session X:X::X:X
```

clear ldp adjacency *

Netconf RPC payload

```
<clear-ldp-adjacency-all xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ldp"/>
```

Command Syntax

```
clear ldp adjacency *
```

clear ldp adjacency A.B.C.D

Attribute Name: addr

Attribute Type: inet:ipv4-address

Netconf RPC payload

```
<clear-ldp-adjacency-ipv4 xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ldp">
  <addr>A.B.C.D</addr>
</clear-ldp-adjacency-ipv4>
```

Command Syntax

```
clear ldp adjacency A.B.C.D
```

clear ldp adjacency X:X::X:X

Attribute Name: addr

Attribute Type: inet:ipv6-address

Netconf RPC payload

```
<clear-ldp-adjacency-ipv6 xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ldp">
  <addr>X:X::X:X</addr>
</clear-ldp-adjacency-ipv6>
```

Command Syntax

```
clear ldp adjacency X:X::X:X
```

snmp restart ldp

Netconf RPC payload

```
<snmp-restart-ldp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ldp"/>
```

Command Syntax

```
snmp restart ldp
```

debug ldp (events|fsm|hexdump|dsm|usm|tsm|qos|nsm|advertise-labels|cspf|vc usm|vc dsm|graceful-restart|rib|packet notification|packet hello|packet initialization|packet keepalive|packet address|packet label|packet|all)

Attribute Name: terminal-debug-options

Attribute Type: bits (events|fsm|hexdump|dsm|usm|tsm|qos|nsm|advertise-labels|cspf|vc usm|vc dsm|graceful-restart|rib|packet notification|packet hello|packet initialization|packet keepalive|packet address|packet label|packet|all)

Netconf RPC payload

```
<ldp-terminal-debug-on xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ldp">
<terminal-debug-options>events</terminal-debug-options>
</ldp-terminal-debug-on>
```

Command Syntax

```
debug ldp (events|fsm|hexdump|dsm|usm|tsm|qos|nsm|advertise-labels|cspf|vc usm|vc
dsm|graceful-restart|rib|packet notification|packet hello|packet
initialization|packet keepalive|packet address|packet label|packet|all)
```

no debug ldp (events|fsm|hexdump|dsm|usm|tsm|qos|nsm|advertise-labels|cspf|vc usm|vc dsm|graceful-restart|rib|packet notification|packet hello|packet initialization|packet keepalive|packet address|packet label|packet|all)

Attribute Name: terminal-debug-options

Attribute Type: bits (events|fsm|hexdump|dsm|usm|tsm|qos|nsm|advertise-labels|cspf|vc usm|vc dsm|graceful-restart|rib|packet notification|packet hello|packet initialization|packet keepalive|packet address|packet label|packet|all)

Netconf RPC payload

```
<ldp-terminal-debug-off xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ldp">
<terminal-debug-options>events</terminal-debug-options>
</ldp-terminal-debug-off>
```

Command Syntax

```
no debug ldp (events|fsm|hexdump|dsm|usm|tsm|qos|nsm|advertise-labels|cspf|vc
usm|vc dsm|graceful-restart|rib|packet notification|packet hello|packet
initialization|packet keepalive|packet address|packet label|packet|all)
```

restart ldp graceful

Netconf RPC payload

```
<restart-ldp-graceful xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ldp"/>
```

Command Syntax

```
restart ldp graceful
```

IPI-LDP-INTERFACE

Configure enable ldp ipv4

Use this attribute to enable LDP IPv4, on a specified interface. This command enables the transmission of Hello packets through the current interface, so that LDP adjacencies and LDP sessions can be created.

Attribute Name: enable-ldp-ipv4

Attribute Type: uint8

Netconf edit-config payload

```
<ldp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ldp">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      </enable-ldp-ipv4><!-- operation="delete"-->
    </interface>
  </interfaces>
</ldp>
```

Command Syntax

```
enable-ldp ipv4
```

Configure enable ldp ipv4

Use this attribute to enable LDP IPv4, on a specified interface. This command enables the transmission of Hello packets through the current interface, so that LDP adjacencies and LDP sessions can be created.

Attribute Name: enable-ldp-ipv4

Attribute Type: uint8

Netconf edit-config payload

```
<ldp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ldp">
  <interfaces>
    <interface>
      <name>WORD</name>
```

```

    <config>
      <name>WORD</name>
    </config>
  </enable-ldp-ipv4><!-- operation="delete"-->
</interface>
</interfaces>
</ldp>

```

Command Syntax

```
enable-ldp ipv4 no-igp-sync
```

Configure enable ldp ipv6

Use this attribute to enable LDP IPv6, on a specified interface. This command enables the transmission of Hello packets through the current interface, so that LDP adjacencies and LDP sessions can be created.

Attribute Name: enable-ldp-ipv6

Attribute Type: uint8

Netconf edit-config payload

```

<ldp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ldp">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
    </enable-ldp-ipv6><!-- operation="delete"-->
  </interface>
</interfaces>
</ldp>

```

Command Syntax

```
enable-ldp ipv6 (igp-sync|no-igp-sync)
```

Configure enable ldp ipv6

Use this attribute to enable LDP IPv6, on a specified interface. This command enables the transmission of Hello packets through the current interface, so that LDP adjacencies and LDP sessions can be created.

Attribute Name: enable-ldp-ipv6

Attribute Type: uint8

Netconf edit-config payload

```

<ldp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ldp">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>

```

```
</config>
  </enable-ldp-ipv6><!-- operation="delete"-->
</interface>
</interfaces>
</ldp>
```

Command Syntax

```
enable-ldp ipv6
```

Configure enable ldp ipv6

Use this attribute to enable LDP IPv6, on a specified interface. This command enables the transmission of Hello packets through the current interface, so that LDP adjacencies and LDP sessions can be created.

Attribute Name: enable-ldp-ipv6

Attribute Type: uint8

Attribute Name: enable-ldp-ipv4

Attribute Type: empty

Netconf edit-config payload

```
<ldp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ldp">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
        </enable-ldp-ipv4><!-- operation="delete"-->
      </config>
      </enable-ldp-ipv6><!-- operation="delete"-->
    </interface>
  </interfaces>
</ldp>
```

Command Syntax

```
enable-ldp both
```

Configure enable ldp ipv6

Use this attribute to enable LDP IPv6, on a specified interface. This command enables the transmission of Hello packets through the current interface, so that LDP adjacencies and LDP sessions can be created.

Attribute Name: enable-ldp-ipv6

Attribute Type: uint8

Attribute Name: enable-ldp-ipv4

Attribute Type: empty

Netconf edit-config payload

```
<ldp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ldp">
```

```

<interfaces>
<interface>
  <name>WORD</name>
  <config>
    <name>WORD</name>
    </enable-ldp-ipv4><!-- operation="delete"-->
  </config>
  </enable-ldp-ipv6><!-- operation="delete"-->
</interface>
</interfaces>
</ldp>

```

Command Syntax

```
enable-ldp both (igp-sync|no-igp-sync)
```

Configure multicast hello disable

Use this attribute to enable multicast hello exchange on specified interfaces enabled for LDP.

Attribute Name: multicast-hello-disable

Attribute Type: uint8

Netconf edit-config payload

```

<ldp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ldp">
<interfaces>
<interface>
  <name>WORD</name>
  <config>
    <name>WORD</name>
  </config>
  </multicast-hello-disable><!-- operation="delete"-->
</interface>
</interfaces>
</ldp>

```

Command Syntax

```
no ldp multicast-hellos
```

Configure maximum pdu length

Use this attribute to specify max pdu length

Attribute Name: maximum-pdu-length

Attribute Type: uint32

Default Value: 4096

Attribute Range: 256-65535

Netconf edit-config payload

```
<ldp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ldp">
```

```
<interfaces>
<interface>
  <name>WORD</name>
  <config>
    <name>WORD</name>
  </config>
  <maximum-pdu-length>256</maximum-pdu-length> <!-- operation="delete"-->
</interface>
</interfaces>
</ldp>
```

Command Syntax

```
ldp max-pdu-length <256-65535>
```

Configure ldp igp sync delay interval

Use this attribute to configure a synchronization delay, that is, a delay for notifications of LDP convergence to the IGP protocol used, which can be either IS-IS or OSPF.

Attribute Name: ldp-igp-sync-delay-interval

Attribute Type: uint32

Attribute Range: 5-60

Netconf edit-config payload

```
<ldp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ldp">
<interfaces>
<interface>
  <name>WORD</name>
  <config>
    <name>WORD</name>
  </config>
  <ldp-igp-sync-delay-interval>5</ldp-igp-sync-delay-interval> <!--
operation="delete"-->
</interface>
</interfaces>
</ldp>
```

Command Syntax

```
mpls ldp-igp sync-delay <5-60>
```

Configure hello interval

Use this attribute set the hello interval to send the hello messages to peers

Attribute Name: hello-interval

Attribute Type: uint16

Default Value: 5

Attribute Range: 1-21845

Netconf edit-config payload

```
<ldp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ldp">
<interfaces>
<interface>
  <name>WORD</name>
  <config>
    <name>WORD</name>
  </config>
  <hello-timers>
  <config>
    <hello-interval>1</hello-interval> <!-- operation="delete"-->
  </config>
</hello-timers>
</interface>
</interfaces>
</ldp>
```

Command Syntax

```
ldp hello-interval <1-21845>
```

Configure hello holdtime

Use this attribute set the hello hold time as the time out value that the router waits before rejecting an adjacency

Attribute Name: hello-holdtime

Attribute Type: uint16

Default Value: 15

Attribute Range: 3-65535

Netconf edit-config payload

```
<ldp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ldp">
<interfaces>
<interface>
  <name>WORD</name>
  <config>
    <name>WORD</name>
  </config>
  <hello-timers>
  <config>
    <hello-holdtime>3</hello-holdtime> <!-- operation="delete"-->
  </config>
</hello-timers>
</interface>
</interfaces>
</ldp>
```

Command Syntax

```
ldp hold-time <3-65535>
```

Configure keepalive interval

Use this attribute to set the global value for the interval after which keep-alive packets are sent out

Attribute Name: keepalive-interval

Attribute Type: uint16

Default Value: 10

Attribute Range: 1-21845

Netconf edit-config payload

```
<ldp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ldp">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      <session-timers>
        <config>
          <keepalive-interval>1</keepalive-interval> <!-- operation="delete"-->
        </config>
      </session-timers>
    </interface>
  </interfaces>
</ldp>
```

Command Syntax

```
ldp keepalive-interval <1-21845>
```

Configure keepalive timeout

Use this attribute to set the time period for which an LSR must wait for successive keep-alive messages from LDP peers

Attribute Name: keepalive-timeout

Attribute Type: uint16

Default Value: 30

Attribute Range: 3-65535

Netconf edit-config payload

```
<ldp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ldp">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      <session-timers>
        <config>
```

```

        <keepalive-timeout>3</keepalive-timeout> <!-- operation="delete"-->
    </config>
</session-timers>
</interface>
</interfaces>
</ldp>

```

Command Syntax

```
ldp keepalive-timeout <3-65535>
```

Configure interface advertisement mode

Use this attribute to set the label advertisement mode for an interface to either downstream-ondemand (label is sent only when requested) or downstream-unsolicited (label is sent unrequested).

Attribute Name: interface-advertisement-mode

Attribute Type: enum (downstream-unsolicited|downstream-on-demand)

Default Value: downstream-unsolicited

Netconf edit-config payload

```

<ldp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ldp">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      <label-management>
        <config>
          <interface-advertisement-mode>downstream-unsolicited</interface-
advertisement-mode> <!-- operation="delete"-->
        </config>
      </label-management>
    </interface>
  </interfaces>
</ldp>

```

Command Syntax

```
ldp advertisement-mode (downstream-unsolicited|downstream-on-demand)
```

Configure interface retention mode

Use this attribute to set the retention mode to be used for all labels exchanged via the given interface. When an LSR receives a label binding for a particular FEC (Forwarding Equivalence Class) from another LSR that is not its next hop for that FEC, it might keep track of such bindings or discard them. Use the liberal parameter to retain all labels binding to FEC received from label distribution peers, even if the LSR is not the current next-hop. Use the conservative parameter to maintain only the label bindings for valid next-hops in a LSP. Liberal label retention mode allows for quicker adaptation to routing changes, whereas conservative label retention mode requires an LSR to maintain fewer labels.

Attribute Name: interface-retention-mode

Attribute Type: enum (liberal|conservative)

Default Value: liberal

Netconf edit-config payload

```
<ldp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ldp">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      <label-management>
        <config>
          <interface-retention-mode>liberal</interface-retention-mode> <!--
operation="delete"-->
        </config>
      </label-management>
    </interface>
  </interfaces>
</ldp>
```

Command Syntax

```
ldp label-retention-mode (liberal|conservative)
```

IPI-LDP-PEER

Configure targeted global hello interval

Use this attribute to set the interval for sending unicast hello packets to targeted peers

Attribute Name: targeted-global-hello-interval

Attribute Type: uint16

Default Value: 15

Attribute Range: 1-21845

Netconf edit-config payload

```
<ldp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ldp">
  <targeted-peers>
    <global-timers>
      <config>
        <targeted-global-hello-interval>1</targeted-global-hello-interval> <!--
operation="delete"-->
      </config>
    </global-timers>
  </targeted-peers>
</ldp>
```

Command Syntax

```
targeted-peer-hello-interval <1-21845>
```

Configure targeted global hello holdtime

Use this attribute to set the time-out value that is the time that the router waits before rejecting an adjacency with targeted peers.

Attribute Name: targeted-global-hello-holdtime

Attribute Type: uint16

Default Value: 45

Attribute Range: 3-65535

Netconf edit-config payload

```
<ldp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ldp">
  <targeted-peers>
    <global-timers>
      <config>
        <targeted-global-hello-holdtime>3</targeted-global-hello-holdtime> <!--
operation="delete"-->
      </config>
    </global-timers>
  </targeted-peers>
</ldp>
```

Command Syntax

```
targeted-peer-hold-time <3-65535>
```

Configure target address

Use this attribute to enter a targeted IPv4 or IPv6 LDP peer mode. A targeted session is an LDP session between non-directly connected LSRs. Set this command to send a targeted hello messages to specific IP addresses. This command is specific to a targeted IPv4 or IPv6 LDP peer.

Attribute Name: target-address

Attribute Type: union

Netconf edit-config payload

```
<ldp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ldp">
  <targeted-peers>
    <targeted-peer> <!-- operation="delete"-->
      <target-address>LDP_IP_ADDR_T</target-address>
    <config>
      <target-address>LDP_IP_ADDR_T</target-address>
    </config>
  </targeted-peer>
</targeted-peers>
</ldp>
```

Command Syntax

```
targeted-peer (ipv4 A.B.C.D|ipv6 X:X::X:X)
```

Configure hello interval

Use this attribute set the hello interval to send the hello messages to peers

Attribute Name: hello-interval

Attribute Type: uint16

Default Value: 5

Attribute Range: 1-21845

Netconf edit-config payload

```
<ldp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ldp">
  <targeted-peers>
    <targeted-peer>
      <target-address>LDP_IP_ADDR_T</target-address>
      <config>
        <target-address>LDP_IP_ADDR_T</target-address>
      </config>
      <hello-interval>1</hello-interval> <!-- operation="delete"-->
    </targeted-peer>
  </targeted-peers>
</ldp>
```

Command Syntax

```
hello-interval <1-21845>
```

Configure hello holdtime

Use this attribute set the hello hold time as the time out value that the router waits before rejecting an adjacency

Attribute Name: hello-holdtime

Attribute Type: uint16

Default Value: 15

Attribute Range: 3-65535

Netconf edit-config payload

```
<ldp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ldp">
  <targeted-peers>
    <targeted-peer>
      <target-address>LDP_IP_ADDR_T</target-address>
      <config>
        <target-address>LDP_IP_ADDR_T</target-address>
      </config>
      <hello-holdtime>3</hello-holdtime> <!-- operation="delete"-->
    </targeted-peer>
  </targeted-peers>
</ldp>
```

```
</ldp>
```

Command Syntax

```
hold-time <3-65535>
```

IPI-QOS

Configure enable qos

Use this attribute to globally enable or disable QoS

Attribute Name: enable-qos

Attribute Type: empty

Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <config>
      </enable-qos><!-- operation="delete"-->
    </config>
  </global>
</qos>
```

Command Syntax

```
qos enable
```

Configure statistics enabled

Use this attribute to enable QoS statistics

Attribute Name: statistics-enabled

Attribute Type: empty

Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <config>
      </statistics-enabled><!-- operation="delete"-->
    </config>
  </global>
</qos>
```

Command Syntax

```
qos statistics
```

Configure block size

Use this attribute to configure block-size for vlan-queuing

Attribute Name: block-size

Attribute Type: uint8

Default Value: 1

Attribute Range: 1-8

Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <config>
      <block-size>1</block-size> <!-- operation="delete"-->
    </config>
  </global>
</qos>
```

Command Syntax

```
qos vlan-queuing block-size <1-8>
```

Configure name

Use this attribute to set a name to CoS to Traffic-Class profile

This command is supported when following feature are enabled QoS Mapping Profile feature

Attribute Name: name

Attribute Type: string

Attribute Range: 1-31

Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <map-profile>
      <cos-to-queue-profiles>
        <cos-to-queue-profile> <!-- operation="delete"-->
          <name>NAME</name>
          <config>
            <name>WORD</name>
          </config>
        </cos-to-queue-profile>
      </cos-to-queue-profiles>
    </map-profile>
  </global>
</qos>
```

Command Syntax

```
qos profile cos-to-queue (NAME|default)
```

Configure color

Use this attribute to select the color CoS DEI is mapped to.

This command is supported when following feature are enabled QoS Mapping Profile feature and following feature are disabled QoS custom options2

Attribute Name: color

Attribute Type: enum (green|yellow|red)

Attribute Name: queue-id

Attribute Type: uint8

Attribute Range: 0-7

Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <map-profile>
      <cos-to-queue-profiles>
        <cos-to-queue-profile>
          <name>NAME</name>
          <config>
            <name>WORD</name>
          </config>
        <cos-dei-to-queues>
          <cos-dei-to-queue>
            <dei-value>all</dei-value>
            <config>
              <dei-value>all</dei-value>
              <cos-value>0</cos-value>
              <queue-id>0</queue-id> <!-- operation="delete"-->
            </config>
            <cos-value>0</cos-value>
            <color>green</color> <!-- operation="delete"-->
          </cos-dei-to-queue>
        </cos-dei-to-queues>
      </cos-to-queue-profile>
    </cos-to-queue-profiles>
  </map-profile>
</global>
</qos>
```

Command Syntax

```
cos <0-7> (dei (0|1|all)) queue <0-7> (color (green|yellow|red))
```

Configure name

Use this attribute to set a name to DSCP to Traffic-Class profile

This command is supported when following feature are enabled QoS Mapping Profile feature

Attribute Name: name

Attribute Type: string

Attribute Range: 1-31

Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <map-profile>
      <dscp-to-queue-profiles>
        <dscp-to-queue-profile> <!-- operation="delete"-->
          <name>NAME</name>
          <config>
            <name>WORD</name>
          </config>
        </dscp-to-queue-profile>
      </dscp-to-queue-profiles>
    </map-profile>
  </global>
</qos>
```

Command Syntax

```
qos profile dscp-to-queue (NAME|default)
```

Configure color

Use this attribute to select the color to map.

This command is supported when following feature are enabled QoS Mapping Profile feature

Attribute Name: color

Attribute Type: enum (green|yellow|red)

Attribute Name: queue-id

Attribute Type: uint8

Attribute Range: 0-7

Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <map-profile>
      <dscp-to-queue-profiles>
        <dscp-to-queue-profile>
          <name>NAME</name>
          <config>
            <name>WORD</name>
          </config>
        <dscp-to-queues>
          <dscp-to-queue>
            <dscp-value>0</dscp-value>
            <config>
              <dscp-value>0</dscp-value>
              <queue-id>0</queue-id> <!-- operation="delete"-->
            </config>
            <color>green</color> <!-- operation="delete"-->
          </dscp-to-queue>
        </dscp-to-queues>
      </dscp-to-queue-profiles>
    </map-profile>
  </global>
</qos>
```

```

</dscp-to-queue>
</dscp-to-queues>
</dscp-to-queue-profile>
</dscp-to-queue-profiles>
</map-profile>
</global>
</qos>

```

Command Syntax

```
dscp <0-63> queue <0-7> color (green|yellow|red)
```

Configure queue id

Use this attribute to select the Traffic-Class DSCP is mapped to

This command is supported when following feature are enabled QoS Mapping Profile feature

Attribute Name: queue-id

Attribute Type: uint8

Attribute Range: 0-7

Netconf edit-config payload

```

<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
<global>
<map-profile>
<dscp-to-queue-profiles>
<dscp-to-queue-profile>
  <name>NAME</name>
  <config>
    <name>WORD</name>
  </config>
<dscp-to-queues>
<dscp-to-queue>
  <dscp-value>0</dscp-value>
  <config>
    <dscp-value>0</dscp-value>
  </config>
  <queue-id>0</queue-id> <!-- operation="delete"-->
</dscp-to-queue>
</dscp-to-queues>
</dscp-to-queue-profile>
</dscp-to-queue-profiles>
</map-profile>
</global>
</qos>

```

Command Syntax

```
dscp <0-63> queue <0-7>
```

Configure profile id

Use this attribute to set a name to MPLS experimental (EXP) to Traffic-Class profile name. Default value is 0.

This command is supported when following feature are enabled Diffserv feature, QoS Mapping Profile feature

Attribute Name: profile-id

Attribute Type: enum (default)

Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <map-profile>
      <exp-to-queue-profiles>
        <exp-to-queue-profile> <!-- operation="delete"-->
          <profile-id>default</profile-id>
          <config>
            <profile-id>default</profile-id>
          </config>
        </exp-to-queue-profile>
      </exp-to-queue-profiles>
    </map-profile>
  </global>
</qos>
```

Command Syntax

```
qos profile exp-to-queue default
```

Configure color

Use this attribute to select the color mapped to.

This command is supported when following feature are enabled Diffserv feature, QoS Mapping Profile feature

Attribute Name: color

Attribute Type: enum (green|yellow|red)

Attribute Name: queue-id

Attribute Type: uint8

Attribute Range: 0-7

Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <map-profile>
      <exp-to-queue-profiles>
        <exp-to-queue-profile>
          <profile-id>default</profile-id>
          <config>
            <profile-id>default</profile-id>
          </config>
        </exp-to-queue-profile>
      </exp-to-queue-profiles>
    </map-profile>
  </global>
</qos>
```

```

<exp-to-queues>
<exp-to-queue>
  <exp-value>0</exp-value>
  <config>
    <exp-value>0</exp-value>
    <queue-id>0</queue-id> <!-- operation="delete"-->
  </config>
  <color>green</color> <!-- operation="delete"-->
</exp-to-queue>
</exp-to-queues>
</exp-to-queue-profile>
</exp-to-queue-profiles>
</map-profile>
</global>
</qos>

```

Command Syntax

```
exp <0-7> queue <0-7> color (green|yellow|red)
```

Configure queue id

Use this attribute to select the Traffic-Class mapped to

This command is supported when following feature are enabled Diffserv feature, QoS Mapping Profile feature

Attribute Name: queue-id

Attribute Type: uint8

Attribute Range: 0-7

Netconf edit-config payload

```

<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
<global>
<map-profile>
<exp-to-queue-profiles>
<exp-to-queue-profile>
  <profile-id>default</profile-id>
  <config>
    <profile-id>default</profile-id>
  </config>
<exp-to-queues>
<exp-to-queue>
  <exp-value>0</exp-value>
  <config>
    <exp-value>0</exp-value>
  </config>
  <queue-id>0</queue-id> <!-- operation="delete"-->
</exp-to-queue>
</exp-to-queues>
</exp-to-queue-profile>
</exp-to-queue-profiles>

```

```
</map-profile>
</global>
</qos>
```

Command Syntax

```
exp <0-7> queue <0-7>
```

Configure name

Use this attribute to set a name to MPLS experimental (EXP) to Traffic-Class profile name

This command is supported when following feature are enabled Diffserv feature,QoS Mapping Profile feature

Attribute Name: name

Attribute Type: string

Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <map-profile>
      <queue-to-exp-profiles>
        <queue-to-exp-profile> <!-- operation="delete"-->
          <name>NAME</name>
          <config>
            <name>WORD</name>
          </config>
        </queue-to-exp-profile>
      </queue-to-exp-profiles>
    </map-profile>
  </global>
</qos>
```

Command Syntax

```
qos profile queue-to-exp (NAME|default)
```

Configure queue id

Use this attribute to select the Traffic-Class to map

This command is supported when following feature are enabled QoS custom options1,Diffserv feature,QoS Mapping Profile feature

Attribute Name: queue-id

Attribute Type: uint8

Attribute Range: 0-7

Attribute Name: exp-value

Attribute Type: uint8

Attribute Range: 0-7

Netconf edit-config payload

```

<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <map-profile>
      <queue-to-exp-profiles>
        <queue-to-exp-profile>
          <name>NAME</name>
          <config>
            <name>WORD</name>
          </config>
        </queue-to-exp>
      </queue-to-exp>
    </map-profile>
  </global>
</qos>

```

Command Syntax

```
queue <0-7> exp <0-7>
```

Configure name

Use this attribute to select the Traffic-Class color to CoS profile name

This command is supported when following feature are enabled QoS Mapping Profile feature

Attribute Name: name

Attribute Type: string

Attribute Range: 1-31

Netconf edit-config payload

```

<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <map-profile>
      <queue-color-to-cos-profiles>
        <queue-color-to-cos-profile> <!-- operation="delete"-->
          <name>NAME</name>
          <config>
            <name>WORD</name>
          </config>
        </queue-color-to-cos-profile>
      </queue-color-to-cos-profiles>
    </map-profile>
  </global>
</qos>

```

```
</map-profile>
</global>
</qos>
```

Command Syntax

```
qos profile queue-color-to-cos (NAME|default)
```

Configure color

Use this attribute to select the color to map. Default value is 3.

This command is supported when following feature are enabled QoS Mapping Profile feature

Attribute Name: color

Attribute Type: enum (green|yellow|red|all)

Attribute Name: cos-value

Attribute Type: uint8

Attribute Range: 0-7

Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <map-profile>
      <queue-color-to-cos-profiles>

              <cos-value>0</cos-value>
            </config>
            <queue-id>0</queue-id>
          </queue-color-to-cos>
        </queue-color-to-coses>
      </queue-color-to-cos-profile>
    </queue-color-to-cos-profiles>
  </map-profile>
</global>
</qos>
```

Command Syntax

```
queue <0-7> (color (green|yellow|red|all)|) cos <0-7>
```

Configure name

Use this attribute to select the Traffic-Class to Precedence profile name

This command is supported when following feature are enabled QoS Mapping Profile feature

Attribute Name: name

Attribute Type: string

Attribute Range: 1-31

Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <map-profile>
      <queue-to-precedence-profiles>
        <queue-to-precedence-profile> <!-- operation="delete"-->
          <name>NAME</name>
          <config>
            <name>WORD</name>
          </config>
        </queue-to-precedence-profile>
      </queue-to-precedence-profiles>
    </map-profile>
  </global>
</qos>
```

Command Syntax

```
qos profile queue-to-precedence NAME
```

Configure queue id

Use this attribute to select the Traffic-Class to map

This command is supported when following feature are enabled QoS Mapping Profile feature

Attribute Name: queue-id

Attribute Type: uint8

Attribute Range: 0-7

Attribute Name: precedence-value

Attribute Type: uint8

Attribute Range: 0-7

Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <map-profile>
      <queue-to-precedence-profiles>
        <queue-to-precedence-profile>
          <name>NAME</name>
```

```

    <config>

</queue-to-precedence-profiles>
</map-profile>
</global>
</qos>

```

Command Syntax

```
queue <0-7> precedence <0-7>
```

Configure name

Use this attribute to set a name to Precedence to Traffic-Class profile

This command is supported when following feature are enabled QoS Mapping Profile feature

Attribute Name: name

Attribute Type: string

Attribute Range: 1-31

Netconf edit-config payload

```

<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <map-profile>
      <precedence-to-queue-profiles>
        <precedence-to-queue-profile> <!-- operation="delete"-->
          <name>NAME</name>
          <config>
            <name>WORD</name>
          </config>
        </precedence-to-queue-profile>
      </precedence-to-queue-profiles>
    </map-profile>
  </global>
</qos>

```

Command Syntax

```
qos profile precedence-to-queue NAME
```

Configure queue id

Use this attribute to select the Traffic-Class IP Precedence is mapped to

This command is supported when following feature are enabled QoS Mapping Profile feature

Attribute Name: queue-id

Attribute Type: uint8

Attribute Range: 0-7

Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <map-profile>
      <precedence-to-queue-profiles>
        <precedence-to-queue-profile>
          <name>NAME</name>
          <config>
            <name>WORD</name>
          </config>
        </precedence-to-queue>
      </precedence-to-queue-profiles>
    </map-profile>
  </global>
</qos>
```

Command Syntax

```
precedence <0-7> queue <0-7>
```

Configure name

Use this attribute to select the Traffic-Class color to DSCP profile name

This command is supported when following feature are enabled QoS Mapping Profile feature

Attribute Name: name

Attribute Type: string

Attribute Range: 1-31

Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
```

```
<global>
<map-profile>
<queue-color-to-dscp-profiles>

```
</queue-color-to-dscp-profile>
</queue-color-to-dscp-profiles>
</map-profile>
</global>
</qos>
```

Command Syntax

```
queue <0-7> (color (green|yellow|red|all)|) dscp <0-63>
```

Configure cos

Use this command to enable remarking of CoS set by the egress map

Attribute Name: cos

Attribute Type: empty

Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <remark>
      <config>
        </cos><!-- operation="delete"-->
      </config>
    </remark>
  </global>
</qos>
```

Command Syntax

```
qos remark cos
```

Configure dei

Use this command to enable remarking of DEI set by the egress map

Attribute Name: dei

Attribute Type: empty

Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <remark>
      <config>
        </dei><!-- operation="delete"-->
      </config>
    </remark>
  </global>
</qos>
```

Command Syntax

```
qos remark dei
```

Configure dscp

Use this command to enable remarking of DSCP set by the egress map

Attribute Name: dscp

Attribute Type: empty

Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <remark>
      <config>
        </dscp><!-- operation="delete"-->
      </config>
    </remark>
  </global>
</qos>
```

Command Syntax

```
qos remark dscp
```

Configure name

Use this attribute to set the class-map name

Attribute Name: name

Attribute Type: string

Attribute Range: 1-32

Attribute Name: type

Attribute Type: enum (qos|queuing|queuing-default|vlan-queuing)

Attribute Name: match-criteria

Attribute Type: enum (match-all|match-any)

Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <class-maps>
      <class-map> <!-- operation="delete"-->
        <name>NAME</name>
        <config>
          <name>NAME</name>
          <type>1</type>
          <match-criteria>1</match-criteria>
        </config>
      </class-map>
    </class-maps>
  </global>
</qos>
```

Command Syntax

```
class-map NAME
```

Configure name

Use this attribute to set the class-map name

Attribute Name: name

Attribute Type: string

Attribute Range: 1-32

Attribute Name: type

Attribute Type: enum (qos|queuing|queuing-default|vlan-queuing)

Attribute Name: match-criteria

Attribute Type: enum (match-all|match-any)

Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <class-maps>
      <class-map <!-- operation="delete"-->
        <name>NAME</name>
        <config>
          <name>NAME</name>
          <type>qos</type>
          <match-criteria>1</match-criteria>
        </config>
      </class-map>
    </class-maps>
  </global>
</qos>
```

Command Syntax

```
class-map type (qos) NAME
```

Configure name

Use this attribute to set the class-map name

Attribute Name: name

Attribute Type: string

Attribute Range: 1-32

Attribute Name: type

Attribute Type: enum (qos|queuing|queuing-default|vlan-queuing)

Attribute Name: match-criteria

Attribute Type: enum (match-all|match-any)

Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <class-maps>
      <class-map> <!-- operation="delete"-->
        <name>NAME</name>
        <config>
          <name>NAME</name>
          <type>qos</type>
          <match-criteria>match-all</match-criteria>
        </config>
      </class-map>
    </class-maps>
  </global>
</qos>
```

Command Syntax

```
class-map type (qos) (match-all) NAME
```

Configure name

Use this attribute to set the class-map name

Attribute Name: name

Attribute Type: string

Attribute Range: 1-32

Attribute Name: type

Attribute Type: enum (qos|queuing|queuing-default|vlan-queuing)

Attribute Name: match-criteria

Attribute Type: enum (match-all|match-any)

Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <class-maps>
      <class-map> <!-- operation="delete"-->
        <name>NAME</name>
        <config>
          <name>NAME</name>
          <type>qos</type>
          <match-criteria>match-all</match-criteria>
        </config>
      </class-map>
    </class-maps>
  </global>
</qos>
```

Command Syntax

```
class-map type (qos) (match-any) NAME
```

Configure name

Use this attribute to set the class-map name

Attribute Name: name

Attribute Type: string

Attribute Range: 1-32

Attribute Name: type

Attribute Type: enum (qos|queuing|queuing-default|vlan-queuing)

Attribute Name: match-criteria

Attribute Type: enum (match-all|match-any)

Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <class-maps>
      <class-map <!-- operation="delete"-->
        <name>NAME</name>
        <config>
          <name>NAME</name>
          <type>1</type>
          <match-criteria>match-all</match-criteria>
        </config>
      </class-map>
    </class-maps>
  </global>
</qos>
```

Command Syntax

```
class-map (match-any) NAME
```

Configure name

Use this attribute to set the class-map name

Attribute Name: name

Attribute Type: string

Attribute Range: 1-32

Attribute Name: type

Attribute Type: enum (qos|queuing|queuing-default|vlan-queuing)

Attribute Name: match-criteria

Attribute Type: enum (match-all|match-any)

Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <class-maps>
      <class-map> <!-- operation="delete"-->
        <name>NAME</name>
        <config>
          <name>NAME</name>
          <type>1</type>
          <match-criteria>match-all</match-criteria>
        </config>
      </class-map>
    </class-maps>
  </global>
</qos>
```

Command Syntax

```
class-map (match-all) NAME
```

Configure reference description

This attribute configures reference description message on class-map profile for QoS type.

Attribute Name: reference-description

Attribute Type: string

Attribute Range: 1-64

Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <class-maps>
      <class-map>
        <name>NAME</name>
        <config>
          <name>NAME</name>
          </config>
          <reference-description>LINE</reference-description> <!-- operation="delete"-->
        </class-map>
      </class-maps>
    </global>
  </qos>
```

Command Syntax

```
reference-description LINE
```

Configure access control list name

Use this attribute to classify traffic based on the Access Control List (ACL)

Attribute Name: access-control-list-name

Attribute Type: string

Attribute Range: 1-64

Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <class-maps>
      <class-map>
        <name>NAME</name>
        <config>
          <name>NAME</name>
        </config>
      <match-any-conditions>
        <config>
          <access-control-list-name>NAME</access-control-list-name> <!--
operation="delete"-->
        </config>
      </match-any-conditions>
    </class-map>
  </class-maps>
</global>
</qos>
```

Command Syntax

```
match access-group NAME
```

Configure traffic type

Use this attribute to classify traffic based on the traffic type value

Attribute Name: traffic-type

Attribute Type: enum (l2-uc|l2-uc-unknown|default)

Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <class-maps>
      <class-map>
        <name>NAME</name>
        <config>
          <name>NAME</name>
        </config>
      <match-any-conditions>
        <config>
          <traffic-type>l2-uc</traffic-type> <!-- operation="delete"-->
        </config>
      </match-any-conditions>
    </class-map>
  </class-maps>
</global>
```

```
</qos>
```

Command Syntax

```
match traffic-type (l2-uc|l2-uc-unknown|default)
```

Configure cos

Use this attribute to classify traffic based on the Class of Service (CoS) value

Attribute Name: cos

Attribute Type: string

Attribute Range: 0-7

Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <class-maps>
      <class-map>
        <name>NAME</name>
        <config>
          <name>NAME</name>
        </config>
      <match-any-conditions>
        <config>
          <cos>WORD</cos> <!-- operation="delete"-->
        </config>
      </match-any-conditions>
    </class-map>
  </class-maps>
</global>
</qos>
```

Command Syntax

```
match cos WORD
```

Configure inner cos

Use this attribute to classify traffic based on inner Class of Service (CoS) value

Attribute Name: inner-cos

Attribute Type: string

Attribute Range: 0-7

Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <class-maps>
      <class-map>
        <name>NAME</name>
```

```

    <config>
      <name>NAME</name>
    </config>
  <match-any-conditions>
    <config>
      <inner-cos>WORD</inner-cos> <!-- operation="delete"-->
    </config>
  </match-any-conditions>
</class-map>
</class-maps>
</global>
</qos>

```

Command Syntax

```
match cos inner WORD
```

Configure vlan

Use this attribute to classify traffic based on VLAN ID. Enter VLAN ID 1-4094 or range of VLAN ID's.

Attribute Name: vlan

Attribute Type: string

Attribute Range: 1-4094

Netconf edit-config payload

```

<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <class-maps>
      <class-map>
        <name>NAME</name>
        <config>
          <name>NAME</name>
        </config>
      <match-any-conditions>
        <config>
          <vlan>WORD</vlan> <!-- operation="delete"-->
        </config>
      </match-any-conditions>
    </class-map>
  </class-maps>
</global>
</qos>

```

Command Syntax

```
match vlan WORD
```

Configure inner vlan

Use this attribute to classify traffic based on inner VLAN ID. Enter VLAN ID 1-4094 or range of VLAN ID's.

Attribute Name: inner-vlan

Attribute Type: string

Attribute Range: 1-4094

Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <class-maps>
      <class-map>
        <name>NAME</name>
        <config>
          <name>NAME</name>
        </config>
      <match-any-conditions>
      <config>
        <inner-vlan>WORD</inner-vlan> <!-- operation="delete"-->
      </config>
    </match-any-conditions>
  </class-map>
</class-maps>
</global>
</qos>
```

Command Syntax

```
match vlan inner WORD
```

Configure rtp

Use this attribute to classify traffic based on the Real-time Transport Protocol (RTP). The rtp value 2000-65535 or range of rtp values.

Attribute Name: rtp

Attribute Type: string

Attribute Range: 2000-65535

Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <class-maps>
      <class-map>
        <name>NAME</name>
        <config>
          <name>NAME</name>
        </config>
      <match-any-conditions>
      <config>
        <rtp>WORD</rtp> <!-- operation="delete"-->
      </config>
    </match-any-conditions>
  </class-map>
</class-maps>
</global>
</qos>
```

```
</class-map>
</class-maps>
</global>
</qos>
```

Command Syntax

```
match ip rtp WORD
```

Configure mpls exp

Use this attribute to classify traffic based on the MPLS experimental (EXP) value

Attribute Name: mpls-exp

Attribute Type: string

Attribute Range: 0-7

Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <class-maps>
      <class-map>
        <name>NAME</name>
        <config>
          <name>NAME</name>
        </config>
      <match-any-conditions>
        <config>
          <mpls-exp>WORD</mpls-exp> <!-- operation="delete"-->
        </config>
      </match-any-conditions>
    </class-map>
  </class-maps>
</global>
</qos>
```

Command Syntax

```
match mpls experimental topmost WORD
```

Configure dscp

Use this attribute to classify traffic based on the Differentiated Services Control Protocol (DSCP) value. Warning: In CLI show running, DSCP values with well-known names (ex.: af11, cs0) will be displayed as such. On Netconf, DSCP values will always be numeric.

Attribute Name: dscp

Attribute Type: string

Attribute Range: 0-63

Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <class-maps>
      <class-map>
        <name>NAME</name>
        <config>
          <name>NAME</name>
        </config>
      <match-any-conditions>
      <config>
        <dscp>WORD</dscp> <!-- operation="delete"-->
      </config>
    </match-any-conditions>
  </class-map>
</class-maps>
</global>
</qos>
```

Command Syntax

```
match dscp WORD
```

Configure precedence

Use this attribute to classify traffic based on the precedence value. Warning: In CLI show running, precedence values with well-known names (ex.: priority, immediate) will be displayed as such. On Netconf, precedence values will always be numeric.

Attribute Name: precedence

Attribute Type: string

Attribute Range: 0-7

Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <class-maps>
      <class-map>
        <name>NAME</name>
        <config>
          <name>NAME</name>
        </config>
      <match-any-conditions>
      <config>
        <precedence>WORD</precedence> <!-- operation="delete"-->
      </config>
    </match-any-conditions>
  </class-map>
</class-maps>
</global>
</qos>
```

Command Syntax

```
match precedence WORD
```

Configure packet protocol

Use this attribute to classify traffic based on the protocol

Attribute Name: packet-protocol

Attribute Type: enum (arp|bridging|cdp|clns|clns-es|clns-is|dhcp|isis|ldp|netbios)

Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <class-maps>
      <class-map>
        <name>NAME</name>
        <config>
          <name>NAME</name>
        </config>
      <match-any-conditions>
        <config>
          <packet-protocol>arp</packet-protocol> <!-- operation="delete"-->
        </config>
      </match-any-conditions>
    </class-map>
  </class-maps>
</global>
</qos>
```

Command Syntax

```
match protocol (arp|bridging|cdp|clns|clns-es|clns-is|dhcp|isis|ldp|netbios)
```

Configure source mac

Use this attribute to classify traffic based on the source MAC address. The MAC address value allow up to 17 characters.

Attribute Name: source-mac

Attribute Type: string

Attribute Range: 1-17

Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <class-maps>
      <class-map>
        <name>NAME</name>
        <config>
          <name>NAME</name>
        </config>
      </class-map>
    </class-maps>
  </global>
</qos>
```

```
</config>
<match-any-conditions>
<config>
    <source-mac>MAC_ADDR</source-mac> <!-- operation="delete"-->
</config>
</match-any-conditions>
</class-map>
</class-maps>
</global>
</qos>
```

Command Syntax

```
match mac src MAC_ADDR
```

Configure destination mac

Use this attribute to classify traffic based on the destination MAC address. The MAC address value allow up to 17 characters.

Attribute Name: destination-mac

Attribute Type: string

Attribute Range: 1-17

Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
<global>
<class-maps>
<class-map>
    <name>NAME</name>
    <config>
        <name>NAME</name>
    </config>
<match-any-conditions>
<config>
    <destination-mac>MAC_ADDR</destination-mac> <!-- operation="delete"-->
</config>
</match-any-conditions>
</class-map>
</class-maps>
</global>
</qos>
```

Command Syntax

```
match mac dest MAC_ADDR
```

Configure port type

Use this attribute to classify traffic based on layer 4 source port or destination port

Attribute Name: port-type

Attribute Type: enum (source-port|destination-port)

Attribute Name: port

Attribute Type: string

Attribute Range: 1-65535

Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <class-maps>
      <class-map>
        <name>NAME</name>
        <config>
          <name>NAME</name>
        </config>
      <match-any-conditions>
        <ipv4>
          <layer4-match> <!-- operation="delete"-->
            <port-type>source-port</port-type>
            <config>
              <port-type>source-port</port-type>
              <protocol>any</protocol>
              <port>WORD</port>
            </config>
            <protocol>any</protocol>
          </layer4-match>
        </ipv4>
      </match-any-conditions>
    </class-map>
  </class-maps>
</global>
</qos>
```

Command Syntax

```
match layer4 (any|tcp|udp) (source-port|destination-port) WORD
```

Configure traffic type all

Use this attribute to classify traffic based on the traffic type

Attribute Name: traffic-type-all

Attribute Type: enum (l2-uc|l2-uc-unknown|default)

Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <class-maps>
      <class-map>
        <name>NAME</name>
        <config>
```

```

        <name>NAME</name>
    </config>
<match-all-conditions>
<config>
    <traffic-type-all>l2-uc</traffic-type-all> <!-- operation="delete"-->
</config>
</match-all-conditions>
</class-map>
</class-maps>
</global>
</qos>

```

Command Syntax

```
match traffic-type (l2-uc|l2-uc-unknown|default)
```

Configure cos all

Use this attribute to classify traffic based on the Class of Service (CoS) value

Attribute Name: cos-all

Attribute Type: uint8

Attribute Range: 0-7

Netconf edit-config payload

```

<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
<global>
<class-maps>
<class-map>
    <name>NAME</name>
    <config>
        <name>NAME</name>
    </config>
<match-all-conditions>
<config>
    <cos-all>0</cos-all> <!-- operation="delete"-->
</config>
</match-all-conditions>
</class-map>
</class-maps>
</global>
</qos>

```

Command Syntax

```
match cos <0-7>
```

Configure inner cos all

Use this attribute to classify traffic based on the inner Class of Service (CoS) value

Attribute Name: inner-cos-all

Attribute Type: uint8

Attribute Range: 0-7

Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <class-maps>
      <class-map>
        <name>NAME</name>
        <config>
          <name>NAME</name>
        </config>
      <match-all-conditions>
        <config>
          <inner-cos-all>0</inner-cos-all> <!-- operation="delete"-->
        </config>
      </match-all-conditions>
    </class-map>
  </class-maps>
</global>
</qos>
```

Command Syntax

```
match cos inner <0-7>
```

Configure vlan all

Use this attribute to classify traffic based on the VLAN ID

Attribute Name: vlan-all

Attribute Type: uint16

Attribute Range: 1-4094

Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <class-maps>
      <class-map>
        <name>NAME</name>
        <config>
          <name>NAME</name>
        </config>
      <match-all-conditions>
        <config>
          <vlan-all>1</vlan-all> <!-- operation="delete"-->
        </config>
      </match-all-conditions>
    </class-map>
  </class-maps>
```

```
</global>
</qos>
```

Command Syntax

```
match vlan <1-4094>
```

Configure inner vlan all

Use this attribute to classify traffic based on the inner VLAN ID

Attribute Name: inner-vlan-all

Attribute Type: uint16

Attribute Range: 1-4094

Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <class-maps>
      <class-map>
        <name>NAME</name>
        <config>
          <name>NAME</name>
        </config>
      <match-all-conditions>
        <config>
          <inner-vlan-all>1</inner-vlan-all> <!-- operation="delete"-->
        </config>
      </match-all-conditions>
    </class-map>
  </class-maps>
</global>
</qos>
```

Command Syntax

```
match vlan inner <1-4094>
```

Configure rtp all

Use this attribute to classify traffic based on the Real-time Transport Protocol (RTP)

Attribute Name: rtp-all

Attribute Type: uint32

Attribute Range: 2000-65535

Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <class-maps>
      <class-map>
```

```

    <name>NAME</name>
  <config>
    <name>NAME</name>
  </config>
<match-all-conditions>
<config>
  <rtp-all>2000</rtp-all> <!-- operation="delete"-->
</config>
</match-all-conditions>
</class-map>
</class-maps>
</global>
</qos>

```

Command Syntax

```
match ip rtp <2000-65535>
```

Configure mpls exp all

Use this attribute to classify traffic based on the MPLS experimental (EXP) value

Attribute Name: mpls-exp-all

Attribute Type: uint8

Attribute Range: 0-7

Netconf edit-config payload

```

<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <class-maps>
      <class-map>
        <name>NAME</name>
        <config>
          <name>NAME</name>
        </config>
      <match-all-conditions>
      <config>
        <mpls-exp-all>0</mpls-exp-all> <!-- operation="delete"-->
      </config>
    </match-all-conditions>
  </class-map>
</class-maps>
</global>
</qos>

```

Command Syntax

```
match mpls experimental topmost <0-7>
```

Configure dscp all

Use this attribute to classify traffic based on the Differentiated Services Control Protocol (DSCP) value. The DSCP value range is 0-63. Warning: In CLI show running, DSCP values with well-known names (ex.: af11, cs0) will be displayed as such. On Netconf, DSCP values will always be numeric. The string type allow up to 8 characters on well-known name.

Attribute Name: dscp-all

Attribute Type: string

Attribute Range: 1-8

Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <class-maps>
      <class-map>
        <name>NAME</name>
        <config>
          <name>NAME</name>
        </config>
      <match-all-conditions>
        <config>
          <dscp-all>WORD</dscp-all> <!-- operation="delete"-->
        </config>
      </match-all-conditions>
    </class-map>
  </class-maps>
</global>
</qos>
```

Command Syntax

```
match dscp WORD
```

Configure precedence all

Use this attribute to classify traffic based on the precedence value. The precedence value range is 0-7. Warning: In CLI show running, precedence values with well-known names (ex.: priority, immediate) will be displayed as such. On Netconf, precedence values will always be numeric. The string type allow up to 13 characters on well-known name.

Attribute Name: precedence-all

Attribute Type: string

Attribute Range: 1-13

Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <class-maps>
      <class-map>
        <name>NAME</name>
        <config>
```

```

        <name>NAME</name>
    </config>
<match-all-conditions>
<config>
    <precedence-all>WORD</precedence-all> <!-- operation="delete"-->
</config>
</match-all-conditions>
</class-map>
</class-maps>
</global>
</qos>

```

Command Syntax

```
match precedence WORD
```

Configure packet protocol all

Use this attribute to classify traffic based on the protocol

Attribute Name: packet-protocol-all

Attribute Type: enum (arp|bridging|cdp|clns|clns-es|clns-is|dhcp|isis|ldp|netbios)

Netconf edit-config payload

```

<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
<global>
<class-maps>
<class-map>
    <name>NAME</name>
    <config>
        <name>NAME</name>
    </config>
<match-all-conditions>
<config>
    <packet-protocol-all>arp</packet-protocol-all> <!-- operation="delete"-->
</config>
</match-all-conditions>
</class-map>
</class-maps>
</global>
</qos>

```

Command Syntax

```
match protocol (arp|bridging|cdp|clns|clns-es|clns-is|dhcp|isis|ldp|netbios)
```

Configure source mac all

Use this attribute to classify traffic based on the source MAC address. The MAC address value allow up to 17 characters.

Attribute Name: source-mac-all

Attribute Type: string

Attribute Range: 1-17

Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <class-maps>
      <class-map>
        <name>NAME</name>
        <config>
          <name>NAME</name>
        </config>
      <match-all-conditions>
        <config>
          <source-mac-all>MAC_ADDR</source-mac-all> <!-- operation="delete"-->
        </config>
      </match-all-conditions>
    </class-map>
  </class-maps>
</global>
</qos>
```

Command Syntax

```
match mac src MAC_ADDR
```

Configure destination mac all

Use this attribute to classify traffic based on the destination MAC address. The MAC address value allow up to 17 characters.

Attribute Name: destination-mac-all

Attribute Type: string

Attribute Range: 1-17

Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <class-maps>
      <class-map>
        <name>NAME</name>
        <config>
          <name>NAME</name>
          </config>
        <match-all-conditions>
          <config>
            <destination-mac-all>MAC_ADDR</destination-mac-all> <!-- operation="delete"-->
          </config>
        </match-all-conditions>
      </class-map>
    </class-maps>
  </global>
</qos>
```

```

</class-maps>
</global>
</qos>

```

Command Syntax

```
match mac dest MAC_ADDR
```

Configure port all

Use this attribute to classify traffic based on the port

Attribute Name: port-all

Attribute Type: uint16

Attribute Range: 1-65535

Netconf edit-config payload

```

<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <class-maps>
      <class-map>
        <name>NAME</name>
        <config>
          <name>NAME</name>
          </config>
        <match-all-conditions>
          <layer4-matches-ipv4>
            <layer4-match-ipv4> <!-- operation="delete"-->
              <port-all>1</port-all>
              <config>
                <port-all>1</port-all>
                <port-type-all>source-port</port-type-all>
                <protocol-all>any</protocol-all>
              </config>
              <port-type-all>source-port</port-type-all>
              <protocol-all>any</protocol-all>
            </layer4-match-ipv4>
          </layer4-matches-ipv4>
        </match-all-conditions>
      </class-map>
    </class-maps>
  </global>
</qos>

```

Command Syntax

```
match layer4 (any|tcp|udp) (source-port|destination-port) <1-65535>
```

Configure name

Use this attribute to set the class-map name

Attribute Name: name

Attribute Type: string

Attribute Range: 1-32

Attribute Name: type

Attribute Type: enum (qos|queuing|queuing-default|vlan-queuing)

Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <class-maps>
      <class-map> <!-- operation="delete"-->
        <name>NAME</name>
        <config>
          <name>NAME</name>
          <type>qos</type>
        </config>
      </class-map>
    </class-maps>
  </global>
</qos>
```

Command Syntax

```
class-map type (queuing|vlan-queuing) NAME
```

Configure reference description

This attribute configures reference description message on class-map profile for queuing.

Attribute Name: reference-description

Attribute Type: string

Attribute Range: 1-64

Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <class-maps-queuing>
      <class-map-queuing>
        <name>WORD</name>
        <config>
          <name>NAME</name>
        </config>
        <reference-description>LINE</reference-description> <!-- operation="delete"-->
      </class-map-queuing>
    </class-maps-queuing>
  </global>
</qos>
```

Command Syntax

reference-description LINE

Configure qos group

Use this attribute to classify traffic QoS group

Attribute Name: qos-group

Attribute Type: uint32

Attribute Range: 1-2000

Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <class-maps-queuing>
      <class-map-queuing>
        <name>WORD</name>
        <config>
          <name>NAME</name>
        </config>
      <match-conditions>
        <config>
          <qos-group>1</qos-group>
        </config>
      </match-conditions>
    </class-map-queuing>
  </class-maps-queuing>
</global>
</qos>
```

Command Syntax

match qos-group <1-2000>

Configure vlan queue

Use this attribute to classify traffic based on the VLAN ID

Attribute Name: vlan-queue

Attribute Type: uint16

Attribute Range: 1-4094

Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <class-maps-queuing>
      <class-map-queuing>
        <name>WORD</name>
        <config>
          <name>NAME</name>
```

```
</config>
<match-conditions>
<config>
    <vlan-queue>1</vlan-queue> <!-- operation="delete"-->
</config>
</match-conditions>
</class-map-queuing>
</class-maps-queuing>
</global>
</qos>
```

Command Syntax

```
match vlan <1-4094>
```

Configure cos

Use this attribute to classify traffic based on the Class of Service (CoS) value

Attribute Name: cos

Attribute Type: string

Attribute Range: 0-7

Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
<global>
<class-maps-queuing>
<class-map-queuing>
    <name>WORD</name>
    <config>
        <name>NAME</name>
    </config>
<match-conditions>
<config>
    <cos>WORD</cos> <!-- operation="delete"-->
</config>
</match-conditions>
</class-map-queuing>
</class-maps-queuing>
</global>
</qos>
```

Command Syntax

```
match cos WORD
```

Configure policy map name

Use this attribute to set the policy-map name

Attribute Name: policy-map-name

Attribute Type: string

Attribute Range: 1-32

Attribute Name: type

Attribute Type: enum (qos|queuing|queuing default|vlan-queuing|hybrid-queuing)

Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <policy-maps>
      <policy-map> <!-- operation="delete"-->
        <policy-map-name>NAME</policy-map-name>
        <config>
          <policy-map-name>NAME</policy-map-name>
          <type>l</type>
        </config>
      </policy-map>
    </policy-maps>
  </global>
</qos>
```

Command Syntax

```
policy-map NAME
```

Configure policy map name

Use this attribute to set the policy-map name

Attribute Name: policy-map-name

Attribute Type: string

Attribute Range: 1-32

Attribute Name: type

Attribute Type: enum (qos|queuing|queuing default|vlan-queuing|hybrid-queuing)

Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <policy-maps>
      <policy-map> <!-- operation="delete"-->
        <policy-map-name>NAME</policy-map-name>
        <config>
          <policy-map-name>NAME</policy-map-name>
          <type>qos</type>
        </config>
      </policy-map>
    </policy-maps>
  </global>
</qos>
```

Command Syntax

```
policy-map type (qos) NAME
```

Configure policy map name

Use this attribute to set the policy-map name

Attribute Name: policy-map-name

Attribute Type: string

Attribute Range: 1-32

Attribute Name: type

Attribute Type: enum (qos|queuing|queuing default|vlan-queuing|hybrid-queuing)

Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <policy-maps>
      <policy-map> <!-- operation="delete"-->
        <policy-map-name>NAME</policy-map-name>
        <config>
          <policy-map-name>NAME</policy-map-name>
          <type>qos</type>
        </config>
      </policy-map>
    </policy-maps>
  </global>
</qos>
```

Command Syntax

```
policy-map type (queuing) NAME
```

Configure policy map name

Use this attribute to set the policy-map name

Attribute Name: policy-map-name

Attribute Type: string

Attribute Range: 1-32

Attribute Name: type

Attribute Type: enum (qos|queuing|queuing default|vlan-queuing|hybrid-queuing)

Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <policy-maps>
      <policy-map> <!-- operation="delete"-->
        <policy-map-name>NAME</policy-map-name>
```

```
<config>
  <policy-map-name>NAME</policy-map-name>
  <type>qos</type>
</config>
</policy-map>
</policy-maps>
</global>
</qos>
```

Command Syntax

```
policy-map type (queuing default) NAME
```

Configure policy map name

Use this attribute to set the policy-map name

Attribute Name: policy-map-name

Attribute Type: string

Attribute Range: 1-32

Attribute Name: type

Attribute Type: enum (qos|queuing|queuing default|vlan-queuing|hybrid-queuing)

Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
<global>
<policy-maps>
<policy-map> <!-- operation="delete"-->
  <policy-map-name>NAME</policy-map-name>
  <config>
    <policy-map-name>NAME</policy-map-name>
    <type>qos</type>
  </config>
</policy-map>
</policy-maps>
</global>
</qos>
```

Command Syntax

```
policy-map type (vlan-queuing|hybrid-queuing) NAME
```

Configure reference description

This attribute configures reference description message on policy-map profile

Attribute Name: reference-description

Attribute Type: string

Attribute Range: 1-64

Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <policy-maps>
      <policy-map>
        <policy-map-name>NAME</policy-map-name>
        <config>
          <policy-map-name>NAME</policy-map-name>
        </config>
        <reference-description>LINE</reference-description> <!-- operation="delete"-->
      </policy-map>
    </policy-maps>
  </global>
</qos>
```

Command Syntax

```
reference-description LINE
```

Configure class map name

Use this attribute to attach a class-map of type qos or queue to the policy-map

Attribute Name: class-map-name

Attribute Type: union

Attribute Name: type

Attribute Type: enum (qos|queuing|queuing default|vlan-queuing|hybrid-queuing)

Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <policy-maps>
      <policy-map>
        <policy-map-name>NAME</policy-map-name>
        <config>
          <policy-map-name>NAME</policy-map-name>
        </config>
      <classes>
        <class> <!-- operation="delete"-->

          <config>
            <class-map-name>NAME</class-map-name>
            <type>qos</type>
          </config>
        </class>
      </classes>
    </policy-map>
  </policy-maps>
</global>
</qos>
```

Command Syntax

```
class (type (qos)|) NAME
```

Configure class map name

Use this attribute to attach a class-map of type qos or queue to the policy-map

Attribute Name: class-map-name

Attribute Type: union

Attribute Name: type

Attribute Type: enum (qos|queuing|queuing default|vlan-queuing|hybrid-queuing)

Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>

      </config>
    </class>
  </classes>
</qos>
```

Command Syntax

```
class type (queuing default) (q0|q1|q2|q3|q4|q5|q6|q7)
```

Configure child service policy name

Use this attribute to attach a child service-policy to the policy-map

Attribute Name: child-service-policy-name

Attribute Type: string

Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <policy-maps>
      <policy-map>
        <policy-map-name>NAME</policy-map-name>
        <config>
```

```

        <policy-map-name>NAME</policy-map-name>
    </config>
<classes>
<class>
    <class-map-name>NAME</class-map-name>
    <config>
        <class-map-name>NAME</class-map-name>
    </config>
    <child-service-policy-name>NAME</child-service-policy-name> <!--
operation="delete"-->
</class>
</classes>
</policy-map>
</policy-maps>
</global>
</qos>

```

Command Syntax

```
service-policy NAME
```

Configure reference description

This attribute configures reference description message on the association between policy-map profile and class-map profile.

Attribute Name: reference-description

Attribute Type: string

Attribute Range: 1-64

Netconf edit-config payload

```

<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
<global>
<policy-maps>
<policy-map>
    <policy-map-name>NAME</policy-map-name>
    <config>
        <policy-map-name>NAME</policy-map-name>
    </config>
<classes>
<class>
    <class-map-name>NAME</class-map-name>
    <config>
        <class-map-name>NAME</class-map-name>
    </config>
    <reference-description>LINE</reference-description> <!-- operation="delete"--
>
</class>
</classes>
</policy-map>
</policy-maps>

```

```
</global>
</qos>
```

Command Syntax

```
reference-description LINE
```

Configure lossless

Use this attribute to set the lossless setting for queue.

Attribute Name: lossless

Attribute Type: empty

Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <policy-maps>
      <policy-map>
        <policy-map-name>NAME</policy-map-name>
        <config>
          <policy-map-name>NAME</policy-map-name>
        </config>
      </policy-map>
    </policy-maps>
  </global>
  <classes>
    <class>
      <class-map-name>NAME</class-map-name>
      <config>
        <class-map-name>NAME</class-map-name>
        <queue-mode>
          <config>
            <lossless><!-- operation="delete"-->
          </config>
        </queue-mode>
      </config>
    </class>
  </classes>
</qos>
```

Command Syntax

```
lossless
```

Configure weighted round robin queue weight

Use this attribute to set the weight for Weighted Round Robin queue scheduling algorithm

Attribute Name: weighted-round-robin-queue-weight

Attribute Type: uint8

Attribute Range: 1-127

Netconf edit-config payload

```

<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <policy-maps>
      <policy-map>
        <policy-map-name>NAME</policy-map-name>
        <config>
          <policy-map-name>NAME</policy-map-name>
        </config>
      </policy-map>
    </policy-maps>
    <classes>
      <class>
        <class-map-name>NAME</class-map-name>
        <config>
          <class-map-name>NAME</class-map-name>
          <queue-mode>
            <config>
              <weighted-round-robin-queue-weight>1</weighted-round-robin-queue-weight>
            </config>
          </queue-mode>
        </config>
      </class>
    </classes>
  </global>
</qos>

```

Command Syntax

```
wrr-queue weight <1-127>
```

Configure strict priority enabled

Use this attribute to set Strict Priority as queue scheduling algorithm

Attribute Name: strict-priority-enabled

Attribute Type: empty

Netconf edit-config payload

```

<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <policy-maps>
      <policy-map>
        <policy-map-name>NAME</policy-map-name>
        <config>
          <policy-map-name>NAME</policy-map-name>
        </config>
      </policy-map>
    </policy-maps>
    <classes>
      <class>
        <class-map-name>NAME</class-map-name>

```

```
<config>
  <class-map-name>NAME</class-map-name>
</config>
<queue-mode>
<config>
  </strict-priority-enabled><!-- operation="delete"-->
</config>
</queue-mode>
</class>
</classes>
</policy-map>
</policy-maps>
</global>
</qos>
```

Command Syntax

priority

Configure weight

Use this attribute to set weight for Weighted Random Early Detection

Attribute Name: weight

Attribute Type: uint8

Attribute Range: 0-15

Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
<global>
<policy-maps>
<policy-map>
  <policy-map-name>NAME</policy-map-name>
  <config>
    <policy-map-name>NAME</policy-map-name>
  </config>
</policy-map>
</policy-maps>
</global>
</qos>
```

```

</policy-map>
</policy-maps>
</global>
</qos>

```

Command Syntax

```
random-detect weight <0-15>
```

Configure min threshold

Use this attribute to set Weighted Random Early Detection minimum threshold

Attribute Name: min-threshold

Attribute Type: uint32

Attribute Range: 1-524288

Attribute Name: max-threshold

Attribute Type: uint32

Attribute Range: 1-524288

Attribute Name: threshold-unit

Attribute Type: enum (packets|bytes|kbytes)

Attribute Name: drop-probability

Attribute Type: uint8

Attribute Range: 1-100

Attribute Name: explicit-congestion-notification

Attribute Type: empty

Netconf edit-config payload

```

<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <policy-maps>
      <policy-map>
        <policy-map-name>NAME</policy-map-name>

          <shapes>
            <shape> <!-- operation="delete"-->
              <rate-unit>kbps</rate-unit>
              <config>
                <rate-unit>kbps</rate-unit>
                <rate-value>0</rate-value>
              </config>
              <rate-value>0</rate-value>
            </shape>
          </shapes>
        </queue-mode>
      </class>
    </classes>
  </global>
</qos>
```

Command Syntax

```
shape <1-1000000000> (kbps|mbps|gbps)
```

Configure rate value

Use this attribute to set a maximum shaping rate on the egress queue

Attribute Name: rate-value

Attribute Type: uint32

Netconf edit-config payload

```

<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <policy-maps>
      <policy-map>
        <policy-map-name>NAME</policy-map-name>
        <config>
          <policy-map-name>NAME</policy-map-name>
        </config>
      </policy-map>
    </policy-maps>
    <classes>
      <class>
        <class-map-name>NAME</class-map-name>
        <config>

            <shapes>
              <shape> <!-- operation="delete"-->
                <rate-unit>kbps</rate-unit>
                <config>
                  <rate-unit>kbps</rate-unit>
                  <rate-value>0</rate-value>
                </config>
                <rate-value>0</rate-value>
              </shape>
            </shapes>
          </queue-mode>
        </config>
      </class>
    </classes>
  </policy-map>
</policy-maps>
</global>
</qos>

```

Command Syntax

```
shape (percent) <1-100>
```

Configure priority

Use this attribute to set the user priority for the class attached to this policy-map

Attribute Name: priority

Attribute Type: uint16

Attribute Range: 1-1000

Netconf edit-config payload

```

<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <policy-maps>

```

```
<policy-map>
  <policy-map-name>NAME</policy-map-name>
  <config>
    <policy-map-name>NAME</policy-map-name>
  </config>

  <qos-mode>
  <config>
    <priority>1</priority> <!-- operation="delete"-->
  </config>
</qos-mode>
</class>
</classes>
</policy-map>
</policy-maps>
</global>
</qos>
```

Command Syntax

```
priority <1-1000>
```

Configure precedence remark

Use this attribute to match traffic classes set action as change precedence in the egress packet to the defined value. The precedence value range is 0-7. Warning: In CLI show running, precedence values with well-known names (ex.: priority, immediate) will be displayed as such. On Netconf, precedence values will always be numeric. The string type allow up to 13 characters on well-known name.

Attribute Name: precedence-remark

Attribute Type: string

Attribute Range: 1-13

Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
  <policy-maps>
  <policy-map>
    <policy-map-name>NAME</policy-map-name>
    <config>
      <policy-map-name>NAME</policy-map-name>
    </config>
  </policy-map>
  </policy-maps>
  </global>
</qos>
```

```

        <class-map-name>NAME</class-map-name>
    </config>
    <qos-mode>
    <config>
        <precedence-remark>WORD</precedence-remark> <!-- operation="delete"-->
    </config>
</qos-mode>
</class>
</classes>
</policy-map>
</policy-maps>
</global>
</qos>

```

Command Syntax

```
set precedence WORD
```

Configure cos value

Use this attribute to match traffic classes set action as change CoS in the egress packet to the defined value

Attribute Name: cos-value

Attribute Type: uint8

Attribute Range: 0-7

Netconf edit-config payload

```

<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <policy-maps>
    <policy-map>
      <policy-map-name>NAME</policy-map-name>

      </config>
      <qos-mode>
      <config>
        <cos-value>0</cos-value> <!-- operation="delete"-->
      </config>
    </qos-mode>
  </class>
</classes>
</policy-map>
</policy-maps>
</global>

```

```
</qos>
```

Command Syntax

```
set cos <0-7>
```

Configure cos remark only bridged

Use this attribute to enable remarking only bridged packets

Attribute Name: cos-remark-only-bridged

Attribute Type: uint8

Attribute Range: 0-7

Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <policy-maps>
      <policy-map>
        <policy-map-name>NAME</policy-map-name>

        </config>
      </class>
    </classes>
    <qos-mode>
      <config>
        <cos-remark-only-bridged>0</cos-remark-only-bridged> <!--
operation="delete"-->
      </config>
    </qos-mode>
  </global>
</qos>
```

Command Syntax

```
set bridge cos <0-7>
```

Configure dscp value remark

Use this attribute to match traffic classes set action as change DSCP in the egress packet to the defined value. The DSCP value range is 0-63. Warning: In CLI show running, DSCP values with well-known names (ex.: af11, cs0) will be displayed as such. On Netconf, DSCP values will always be numeric. The string type allow up to 8 characters on well-known name.

Attribute Name: dscp-value-remark

Attribute Type: string

Attribute Range: 1-8

Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <policy-maps>
      <policy-map>
        <policy-map-name>NAME</policy-map-name>
        <config>
          <policy-map-name>NAME</policy-map-name>
        </config>
      </policy-map>
    </policy-maps>
    <classes>
      <class>
        <class-map-name>NAME</class-map-name>
        <config>

          <qos-mode>
            <config>
              <dscp-value-remark>WORD</dscp-value-remark> <!-- operation="delete"-->
            </config>
          </qos-mode>
        </config>
      </class>
    </classes>
  </global>
</qos>
```

Command Syntax

```
set dscp WORD
```

Configure dscp remark only bridged

Use this attribute to enable remarking only bridged packets. The DSCP value range is 0-63. Warning: In CLI show running, DSCP values with well-known names (ex.: af11, cs0) will be displayed as such. On Netconf, DSCP values will always be numeric. The string type allow up to 8 characters on well-known name.

Attribute Name: dscp-remark-only-bridged

Attribute Type: string

Attribute Range: 1-8

Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <policy-maps>
      <policy-map>
```

```

    <policy-map-name>NAME</policy-map-name>
  <config>
    <policy-map-name>NAME</policy-map-name>

</class>
</classes>
</policy-map>
</policy-maps>
</global>
</qos>

```

Command Syntax

```
set bridge dscp WORD
```

Configure queue id

Use this attribute to match traffic classes set action as change queue in the egress packet to the defined value

Attribute Name: queue-id

Attribute Type: uint8

Attribute Range: 0-7

Netconf edit-config payload

```

<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
  <policy-maps>
  <policy-map>
    <policy-map-name>NAME</policy-map-name>
    <config>
      <policy-map-name>NAME</policy-map-name>
    </config>
  </policy-map>
  </policy-maps>
  </global>
  </qos>

```

```

    <config>
        <queue-id>0</queue-id> <!-- operation="delete"-->
    </config>
</qos-mode>
</class>
</classes>
</policy-map>
</policy-maps>
</global>
</qos>

```

Command Syntax

```
set queue <0-7>
```

Configure queue remark only bridged

Use this attribute to enable remarking only bridged packets

Attribute Name: queue-remark-only-bridged

Attribute Type: uint8

Attribute Range: 0-7

Netconf edit-config payload

```

<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <policy-maps>
      <policy-map>
        <policy-map-name>NAME</policy-map-name>
        <config>
          <policy-map-name>NAME</policy-map-name>
        </config>
      </policy-map>
    </policy-maps>
    <classes>
      <class>
        <class-map-name>NAME</class-map-name>
        <config>
          <class-map-name>NAME</class-map-name>
          <queue-remark-only-bridged>0</queue-remark-only-bridged> <!--
operation="delete"-->
        </config>
      </class>
    </classes>
  </global>
</qos>

```

Command Syntax

```
set bridge queue <0-7>
```

Configure qos group

Use this attribute to set action as change QoS group in the egress packet to the defined value

Attribute Name: qos-group

Attribute Type: uint16

Attribute Range: 1-2000

Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <policy-maps>
      <policy-map>
        <policy-map-name>NAME</policy-map-name>
        <config>
          <policy-map-name>NAME</policy-map-name>
        </config>
      </policy-map>
    </policy-maps>
    <classes>
      <class>
        <class-map-name>NAME</class-map-name>
        <config>
          <class-map-name>NAME</class-map-name>
          < qos-mode>
            <config>
              <qos-group>1</qos-group> <!-- operation="delete"-->
            </config>
          </ qos-mode>
        </config>
      </class>
    </classes>
  </global>
</qos>
```

Command Syntax

```
set qos-group <1-2000>
```

Configure non unicast queue weight

Use this attribute to set action as change qos wrr weight for non-uc queue in the egress to the defined value for matched packets

This command is supported when following feature are enabled QoS custom options1

Attribute Name: non-unicast-queue-weight

Attribute Type: uint8

Attribute Range: 1-127

Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <scheduler-mode>
      <weighted-round-robins>
        <weighted-round-robin> <!-- operation="delete"-->
          <non-unicast-queue-weight>1</non-unicast-queue-weight>
          <config>
            <non-unicast-queue-weight>1</non-unicast-queue-weight>
            <unicast-queue-weight>1</unicast-queue-weight>
          </config>
          <unicast-queue-weight>1</unicast-queue-weight>
        </weighted-round-robin>
      </weighted-round-robins>
    </scheduler-mode>
  </global>
</qos>
```

Command Syntax

```
set qos wrr uc <1-127> non-uc <1-127>
```

Configure enabled

Use this attribute to set strict-priority for scheduler mode of L1 node to WRR

This command is supported when following feature are enabled QoS custom options1

Attribute Name: enabled

Attribute Type: empty

Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <scheduler-mode>
      <strict-priority>
        <config>
          </enabled><!-- operation="delete"-->
        </config>
      </strict-priority>
    </scheduler-mode>
  </global>
</qos>
```

Command Syntax

```
set qos sp
```

clear qos statistics (interface IFNAME|) ((type qos|type qos input|type qos output|type queuing|type all)|)

Attribute Name: interface-name

Attribute Type: string

Default Value: NULL

Attribute Name: type

Attribute Type: enum (type qos|type qos input|type qos output|type queuing|type all)

Default Value: type all

Netconf RPC payload

```
<qos-clear-statistics xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <interface-name>IFNAME</interface-name>
  <type>type all</type>
</qos-clear-statistics>
```

Command Syntax

```
clear qos statistics (interface IFNAME|) ((type qos|type qos input|type qos
output|type queuing|type all)|)
```

IPI-QOS-IF

Configure untagged priority

Use this attribute to set internal priority for untagged traffic on L2 interface

Attribute Name: untagged-priority

Attribute Type: uint8

Attribute Range: 0-7

Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <interfaces xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos-if">
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      <untagged-priority>0</untagged-priority> <!-- operation="delete"-->
    </interface>
  </interfaces>
</qos>
```

Command Syntax

```
qos untagged-priority <0-7>
```

Configure trust dscp

Use this command to classify the ingress traffic based on DSCP map on L2 interface

Attribute Name: trust-dscp

Attribute Type: empty

Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
<interfaces xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos-if">
<interface>
  <name>WORD</name>
  <config>
    <name>WORD</name>
  </config>
  </trust-dscp><!-- operation="delete"-->
</interface>
</interfaces>
</qos>
```

Command Syntax

```
trust dscp
```

Configure cos

Use this command to enable/disable remarking of CoS set by the egress map

Attribute Name: cos

Attribute Type: enum (disable|enable)

Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
<interfaces xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos-if">
<interface>
  <name>WORD</name>
  <config>
    <name>WORD</name>
  </config>
  <remark>
    <config>
      <cos>disable</cos> <!-- operation="delete"-->
    </config>
  </remark>
</interface>
</interfaces>
</qos>
```

Command Syntax

```
qos remark cos (disable|enable)
```

Configure dei

Use this command to enable/disable remarking of DEI set by the egress map

Attribute Name: dei

Attribute Type: enum (disable|enable)

Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
<interfaces xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos-if">
<interface>
  <name>WORD</name>
  <config>
    <name>WORD</name>
  </config>
  <remark>
    <config>
      <dei>disable</dei> <!-- operation="delete"-->
    </config>
  </remark>
</interface>
</interfaces>
</qos>
```

Command Syntax

```
qos remark dei (disable|enable)
```

Configure dscp

Use this command to enable/disable remarking of DSCP set by the egress map

Attribute Name: dscp

Attribute Type: enum (disable|enable)

Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
<interfaces xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos-if">
<interface>
  <name>WORD</name>
  <config>
    <name>WORD</name>
  </config>
  <remark>
    <config>
      <dscp>disable</dscp> <!-- operation="delete"-->
    </config>
  </remark>
</interface>
</interfaces>
</qos>
```

Command Syntax

```
qos remark dscp (disable|enable)
```

Configure name

Interface name for which QoS is being configured

Attribute Name: name

Attribute Type: string

Attribute Name: rate

Attribute Type: uint64

Attribute Name: rate-unit

Attribute Type: enum (kbps|mbps|gbps)

Attribute Name: burst-rate

Attribute Type: uint64

Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
<interfaces xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos-if">
<interface> <!-- operation="delete"-->
  <name>WORD</name>
  <config>
    <name>WORD</name>
  </config>
  <traffic-shape>
    <config>
      <rate>1</rate>
      <rate-unit>kbps</rate-unit>
      <burst-rate>1</burst-rate>
    </config>
  </traffic-shape>
</interface>
</interfaces>
</qos>
```

Command Syntax

```
shape rate <1-1000000000> (kbps|mbps|gbps) burst <2-1000000>
```

Configure name

Interface name for which QoS is being configured

Attribute Name: name

Attribute Type: string

Attribute Name: rate

Attribute Type: uint64

Attribute Name: rate-unit

Attribute Type: enum (kbps|mbps|gbps)

Attribute Name: burst-rate

Attribute Type: uint64

Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <interfaces xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos-if">
    <interface> <!-- operation="delete"-->
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      <traffic-shape>
        <config>
          <rate>1</rate>
          <rate-unit>kbps</rate-unit>
          <burst-rate>1</burst-rate>
        </config>
      </traffic-shape>
    </interface>
  </interfaces>
</qos>
```

Command Syntax

```
shape rate <1-1000000000> (kbps|mbps|gbps) burst <2-1000000>
```

Configure cos to queue

Use this attribute to attach a CoS to Traffic-Class profile to the interface

This command is supported when following feature are enabled QoS Mapping profile

Attribute Name: cos-to-queue

Attribute Type: string

Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <interfaces xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos-if">
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      <map-profile>
        <config>
          <cos-to-queue>NAME</cos-to-queue> <!-- operation="delete"-->
        </config>
      </map-profile>
    </interface>
  </interfaces>
</qos>
```

```
</interface>
</interfaces>
</qos>
```

Command Syntax

```
qos map-profile cos-to-queue NAME
```

Configure dscp to queue

Use this attribute to attach a DSCP to Traffic-Class profile to the interface

This command is supported when following feature are enabled QoS Mapping profile

Attribute Name: dscp-to-queue

Attribute Type: string

Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
<interfaces xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos-if">
<interface>
  <name>WORD</name>
  <config>
    <name>WORD</name>
  </config>
  <map-profile>
  <config>
    <dscp-to-queue>NAME</dscp-to-queue> <!-- operation="delete"-->
  </config>
</map-profile>
</interface>
</interfaces>
</qos>
```

Command Syntax

```
qos map-profile dscp-to-queue NAME
```

Configure precedence to queue

Use this attribute to attach a Precedence to Traffic-Class profile to the interface

This command is supported when following feature are enabled QoS Mapping profile

Attribute Name: precedence-to-queue

Attribute Type: string

Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
<interfaces xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos-if">
<interface>
  <name>WORD</name>
  <config>
```

```
        <name>WORD</name>
    </config>
    <map-profile>
    <config>
        <precedence-to-queue>NAME</precedence-to-queue> <!-- operation="delete"-->
    >
        </config>
    </map-profile>
</interface>
</interfaces>
</qos>
```

Command Syntax

```
qos map-profile precedence-to-queue NAME
```

Configure queue color to cos

Use this attribute to attach a Traffic-Class color to CoS profile to the interface

This command is supported when following feature are enabled QoS Mapping profile

Attribute Name: queue-color-to-cos

Attribute Type: string

Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
<interfaces xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos-if">
<interface>
    <name>WORD</name>
    <config>
        <name>WORD</name>
    </config>
    <map-profile>
    <config>
        <queue-color-to-cos>NAME</queue-color-to-cos> <!-- operation="delete"-->
    </config>
</map-profile>
</interface>
</interfaces>
</qos>
```

Command Syntax

```
qos map-profile queue-color-to-cos NAME
```

Configure queue color to dscp

Use this attribute to attach a Traffic-Class color to DSCP profile to the interface

This command is supported when following feature are enabled QoS Mapping profile

Attribute Name: queue-color-to-dscp

Attribute Type: string

Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <interfaces xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos-if">
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      <map-profile>
        <config>
          <queue-color-to-dscp>NAME</queue-color-to-dscp> <!-- operation="delete"-->
        </config>
      </map-profile>
    </interface>
  </interfaces>
</qos>
```

Command Syntax

```
qos map-profile queue-color-to-dscp NAME
```

Configure queue to precedence

Use this attribute to attach a queue color to Precedence profile to the interface

This command is supported when following feature are enabled QoS Mapping profile

Attribute Name: queue-to-precedence

Attribute Type: string

Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <interfaces xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos-if">
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      <map-profile>
        <config>
          <queue-to-precedence>NAME</queue-to-precedence> <!-- operation="delete"-->
        </config>
      </map-profile>
    </interface>
  </interfaces>
</qos>
```

Command Syntax

```
qos map-profile queue-to-precedence NAME
```

Configure queue to exp

Use this attribute to attach a Traffic-Class to exp profile to the interface

This command is supported when following feature are enabled QoS Mapping profile

Attribute Name: queue-to-exp

Attribute Type: string

Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
<interfaces xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos-if">
<interface>
  <name>WORD</name>
  <config>
    <name>WORD</name>
  </config>
  <map-profile>
  <config>
    <queue-to-exp>NAME</queue-to-exp> <!-- operation="delete"-->
  </config>
</map-profile>
</interface>
</interfaces>
</qos>
```

Command Syntax

```
qos map-profile queue-to-exp NAME
```

Configure type qos policy map name

Use this attribute to attach a service-policy of type qos to the interface

Attribute Name: type-qos-policy-map-name

Attribute Type: string

Attribute Range: 1-32

Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
<interfaces xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos-if">
<interface>
  <name>WORD</name>
  <config>
    <name>WORD</name>
  </config>
  <service-policy>
  <ingress>
```

```

    <config>
      <type-qos-policy-map-name>NAME</type-qos-policy-map-name> <!--
operation="delete"-->
    </config>
  </ingress>
</service-policy>
</interface>
</interfaces>
</qos>

```

Command Syntax

```
service-policy type qos input NAME
```

Configure type qos policy map name

Use this attribute to attach a service-policy of type qos to the interface

Attribute Name: type-qos-policy-map-name

Attribute Type: string

Attribute Range: 1-32

Netconf edit-config payload

```

<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <interfaces xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos-if">
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      <service-policy>
        <egress>
          <config>
            <type-qos-policy-map-name>NAME</type-qos-policy-map-name> <!--
operation="delete"-->
          </config>
        </egress>
      </service-policy>
    </interface>
  </interfaces>
</qos>

```

Command Syntax

```
service-policy type qos output NAME
```

Configure type queuing policy map name

Use this attribute to attach a service-policy of type queue to the interface

Attribute Name: type-queuing-policy-map-name

Attribute Type: string

Attribute Range: 1-32

Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <interfaces xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos-if">
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      <service-policy>
        <egress>
          <config>
            <type-queuing-policy-map-name>NAME</type-queuing-policy-map-name> <!--
operation="delete"-->
          </config>
        </egress>
      </service-policy>
    </interface>
  </interfaces>
</qos>
```

Command Syntax

```
service-policy type queuing output NAME
```

IPI-RSVP

Configure options

Use this attribute to enable all debugging options for an RSVP daemon. Enable RSVP debugs at configuration mode

Attribute Name: options

Attribute Type: bits (events|packet|packet in|packet out|hexdump|nsm|cspf|fsm egress|fsm transit downstream|fsm transit upstream|fsm ingress|rib|neighbor|fsm|fsm transit|all)

Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <debug>
    <config>
      <options>events</options> <!-- operation="delete"-->
    </config>
  </debug>
</rsvp-te>
```

Command Syntax

```
debug rsvp (events|packet|packet in|packet out|hexdump|nsm|cspf|fsm egress|fsm
transit downstream|fsm transit upstream|fsm ingress|rib|neighbor|fsm|fsm
transit|all|)
```

Configure enable rsvp trap

Use this attribute to enable/disable the rsvp trap

Attribute Name: enable-rsvp-trap

Attribute Type: uint8

Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <snmp-configuration>
    <config>
      </enable-rsvp-trap><!-- operation="delete"-->
    </config>
  </snmp-configuration>
</rsvp-te>
```

Command Syntax

```
rsvp-trap enable
```

Configure disable refresh resv parsing

Use this attribute to disable parsing of Refresh RESV messages received from upstream nodes. Use this attribute to minimize message processing by RSVP when you are sure that a particular router does not need to parse Refresh RESV messages to check for changes because LSPs passing through this router are not required to be updated simultaneously.

Attribute Name: disable-refresh-resv-parsing

Attribute Type: uint8

Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <rsvp-instance>
    <config>
      </disable-refresh-resv-parsing><!-- operation="delete"-->
    </config>
  </rsvp-instance>
</rsvp-te>
```

Command Syntax

```
no refresh-resv-parsing
```

Configure disable refresh path parsing

Use this attribute to disable parsing of Refresh PATH messages received from upstream nodes. Use this attribute to minimize message processing by RSVP when you are sure that a particular router does not need to parse Refresh-PATH messages to check for changes, because LSPs passing through this router are not required to be updated simultaneously.

Attribute Name: disable-refresh-path-parsing

Attribute Type: uint8

Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <rsvp-instance>
    <config>
      </disable-refresh-path-parsing><!-- operation="delete"-->
    </config>
  </rsvp-instance>
</rsvp-te>
```

Command Syntax

```
no refresh-path-parsing
```

Configure disable loop detection

Use this attribute to turn on loop detection for Path and Reservation messages exchanged between LSRs

Attribute Name: disable-loop-detection

Attribute Type: uint8

Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <rsvp-instance>
    <config>
      </disable-loop-detection><!-- operation="delete"-->
    </config>
  </rsvp-instance>
</rsvp-te>
```

Command Syntax

```
no loop-detection
```

Configure enable php

Use this attribute to enable Penultimate-Hop-Popping for the router. An egress router sends either the implicit-null or the explicit-null label for LSPs. If the no-php command has been enabled, the egress router sends non-reserved labels (those labels in the label pool range allotted to RSVP) to the upstream router.

Attribute Name: enable-php

Attribute Type: uint8

Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <rsvp-instance>
    <config>
      </enable-php><!-- operation="delete"-->
    </config>
  </rsvp-instance>
</rsvp-te>
```

Command Syntax

php

Configure enable bundle send

Use this attribute to enable sending of BUNDLE messages for all the interfaces

Attribute Name: enable-bundle-send

Attribute Type: uint8

Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <rsvp-instance>
    <config>
      </enable-bundle-send><!-- operation="delete"-->
    </config>
  </rsvp-instance>
</rsvp-te>
```

Command Syntax

bundle-send

Configure enable local protection

Use this attribute to enable/disable the local repair of explicit routes for which this router is a transit node

Attribute Name: enable-local-protection

Attribute Type: uint8

Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <rsvp-instance>
    <config>
      </enable-local-protection><!-- operation="delete"-->
    </config>
  </rsvp-instance>
</rsvp-te>
```

Command Syntax

local-protection

Configure enable explicit null

Use this attribute to send explicit-null labels for directly-connected forwarding equivalency classes (FECs) instead of implicit-null labels. This command controls the label value advertised to an egress router of an LSP. By default, implicit null label (label 3) is advertised for directly connected FECs. If implicit-null label is advertised, the penultimate hop removes the label and sends the packet as a plain IP packet to the egress router. The explicit-null command advertises label 0 and retains the label so the egress router can pop it. For details about usage of explicit-null, please refer to RFC 3032. Use the no parameter with this command to stop sending explicit-null labels for directly-connected FECs and resume sending implicit-null labels.

Attribute Name: enable-explicit-null

Attribute Type: uint8

Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <rsvp-instance>
    <config>
      </enable-explicit-null><!-- operation="delete"-->
    </config>
  </rsvp-instance>
</rsvp-te>
```

Command Syntax

```
explicit-null
```

Configure rsvp

Use this attribute to enter router mode from configure mode and to enable the RSVP daemon, if it is not already enabled and Enter in to router rsvp mode from configure mode

Attribute Name: rsvp

Attribute Type: enum (rsvp)

Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <rsvp-instance>
    <config>
      <rsvp>rsvp</rsvp>
    </config>
  </rsvp-instance>
</rsvp-te>
```

Command Syntax

```
router (rsvp)
```

Configure revert timer

Use this attribute to Hold-on timer before revert back to primary session

Attribute Name: revert-timer

Attribute Type: uint32

Default Value: 60

Attribute Range: 1-65535

Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <rsvp-instance>
    <config>
      <revert-timer>1</revert-timer> <!-- operation="delete"-->
    </config>
  </rsvp-instance>
</rsvp-te>
```

```
</config>
</rsvp-instance>
</rsvp-te>
```

Command Syntax

```
revert-timer <1-65535>
```

Configure ingress

Use this attribute to specify a .from. IPv4 address for the RSVP daemon. This command can be invoked from either the router rsvp mode or from the rsvp-trunk mode. In the RSVP router mode, this command defines the source address as an IPv4 packet sent out by the RSVP daemon. In the RSVP trunk mode, this command indicates a sender.s address in the sender template object that is used in path messages.

Attribute Name: ingress

Attribute Type: inet:ipv4-address

Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <rsvp-instance>
    <config>
      <ingress>A.B.C.D</ingress> <!-- operation="delete"-->
    </config>
  </rsvp-instance>
</rsvp-te>
```

Command Syntax

```
from A.B.C.D
```

Configure enable message ack

Use this attribute to enable message acknowledgement for all messages being sent to neighbors that are known to support refresh reduction.

Attribute Name: enable-message-ack

Attribute Type: uint8

Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <rsvp-instance>
    <route-refresh>
      <config>
        </enable-message-ack><!-- operation="delete"-->
      </config>
    </route-refresh>
  </rsvp-instance>
</rsvp-te>
```

Command Syntax

```
message-ack
```

Configure disable refresh reduction

Use this attribute to enable refresh reduction capability advertisement for all interfaces

Attribute Name: disable-refresh-reduction

Attribute Type: uint8

Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <rsvp-instance>
    <route-refresh>
      <config>
        </disable-refresh-reduction><!-- operation="delete"-->
      </config>
    </route-refresh>
  </rsvp-instance>
</rsvp-te>
```

Command Syntax

```
no refresh-reduction
```

Configure ack wait timeout

Use this attribute to configure the acknowledgement wait timeout for all RSVP-TE neighbors

Attribute Name: ack-wait-timeout

Attribute Type: uint32

Default Value: 10

Attribute Range: 1-65535

Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <rsvp-instance>
    <route-refresh>
      <config>
        <ack-wait-timeout>1</ack-wait-timeout> <!-- operation="delete"-->
      </config>
    </route-refresh>
  </rsvp-instance>
</rsvp-te>
```

Command Syntax

```
ack-wait-timeout <1-65535>
```

Configure refresh time

Use this attribute to configure RSVP refresh interval timer. The timer specifies the interval after which Path and/ or Reservation Request (Resv) messages will be sent out. The refresh time and keep multiplier are two interrelated timing parameters used to calculate the valid Reservation Lifetime for an LSP. Refresh time regulates the interval between

Refresh messages which include Path and Reservation Request (Resv) messages. Refresh messages are sent periodically so that reservation does not timeout in the neighboring nodes. Each sender and receiver host sends Path and Resv messages, downstream and upstream respectively, along the paths.

Attribute Name: refresh-time

Attribute Type: uint16

Default Value: 30

Attribute Range: 1-65535

Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <rsvp-instance>
    <route-refresh>
      <config>
        <refresh-time>1</refresh-time> <!-- operation="delete"-->
      </config>
    </route-refresh>
  </rsvp-instance>
</rsvp-te>
```

Command Syntax

```
refresh-time <1-65535>
```

Configure keep multiplier

Use this attribute to configure the constant to be used to calculate a valid reservation lifetime for a Labeled Switched Path (LSP). The refresh time and keep multiplier are two interrelated timing parameters used to calculate the valid reservation lifetime for an LSP. The router sends refresh messages periodically so that the neighbors do not timeout

Attribute Name: keep-multiplier

Attribute Type: int32

Default Value: 3

Attribute Range: 1-255

Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <rsvp-instance>
    <route-refresh>
      <config>
        <keep-multiplier>1</keep-multiplier> <!-- operation="delete"-->
      </config>
    </route-refresh>
  </rsvp-instance>
</rsvp-te>
```

Command Syntax

```
keep-multiplier <1-255>
```

Configure default frr protection

Use this attribute to set default FRR protection mechanism to trigger when local protection requested by protection mechanism not mentioned via FRR object. When FRR object explicitly requests for the protection type, this attribute will not come into picture. Default will be one-to-one protection.

This command is supported when following feature are enabled MPLS-FRR feature

Attribute Name: default-frr-protection

Attribute Type: enum (one-to-one|facility)

Default Value: one-to-one

Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <rsvp-instance>
    <fast-reroute>
      <config>
        <default-frr-protection>one-to-one</default-frr-protection> <!--
operation="delete"-->
      </config>
    </fast-reroute>
  </rsvp-instance>
</rsvp-te>
```

Command Syntax

```
default-frr-protection (one-to-one|facility)
```

Configure preemption type

Use this attribute to set preemption type for an LSP for the router. Preemption of an LSP or set of LSPs happens based on bandwidth constraints like preempting an LSP cause less number of LSPs be preempted upon satisfying the bandwidth required, preempting an LSP or set of LSPs which results in an LSP having less unused(remaining) bandwidth.

This command is supported when following feature are enabled MPLS-FRR feature

Attribute Name: preemption-type

Attribute Type: enum (less-lsp-preempted|less-unused-bandwidth)

Default Value: less-lsp-preempted

Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <rsvp-instance>
    <fast-reroute>
      <config>
        <preemption-type>less-lsp-preempted</preemption-type> <!-- operation="delete"-->
      </config>
    </fast-reroute>
  </rsvp-instance>
</rsvp-te>
```

Command Syntax

```
preemption-type (less-lsp-preempted|less-unused-bandwidth)
```

Configure bypass lsp addr query interval

Modify interval of bypass trunk querying LSP address

This command is supported when following feature are enabled MPLS-FRR feature

Attribute Name: bypass-lsp-addr-query-interval

Attribute Type: uint8

Default Value: 60

Attribute Range: 10-60

Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <rsvp-instance>
    <fast-reroute>
      <config>
        <bypass-lsp-addr-query-interval>10</bypass-lsp-addr-query-interval> <!--
operation="delete"-->
      </config>
    </fast-reroute>
  </rsvp-instance>
</rsvp-te>
```

Command Syntax

```
bypass-lsp-addr-query-interval <10-60>
```

Configure detour id

Use this attribute to set a path-specific detour LSP identification method, using the detour object.

This command is supported when following feature are enabled MPLS-FRR feature

Attribute Name: detour-id

Attribute Type: enum (sender-template|path)

Default Value: path

Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <rsvp-instance>
    <fast-reroute>
      <config>
        <detour-id>path</detour-id> <!-- operation="delete"-->
      </config>
    </fast-reroute>
  </rsvp-instance>
</rsvp-te>
```

Command Syntax

```
detour-identification (sender-template|path)
```

Configure disable cspf

Use this attribute to disable the use of the Constrained Shortest Path First (CSPF) server for all RSVP sessions. Disable CSPF when no nodes support the required traffic engineering extensions. When this command is executed in Router mode, CSPF is enabled for all configured RSVP sessions, and all RSVP sessions configured from this point forward. If the default CSPF per RSVP session is enabled, it will be disabled. The CSPF status for RSVP sessions can be verified using the `show rsvp session` command with the detail option

Attribute Name: disable-cspf

Attribute Type: uint8

Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <rsvp-instance>
    <cspf>
      <config>
        </disable-cspf><!-- operation="delete"-->
      </config>
    </cspf>
  </rsvp-instance>
</rsvp-te>
```

Command Syntax

```
no cspf
```

Configure cspf lsp reoptimization time

Use this attribute to configure timer for the reoptimizing lsp.

This command is supported when following feature are enabled CSPF feature

Attribute Name: cspf-lsp-reoptimization-time

Attribute Type: uint32

Default Value: 5

Attribute Range: 1-240

Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <rsvp-instance>
    <cspf>
      <config>
        <cspf-lsp-reoptimization-time>1</cspf-lsp-reoptimization-time> <!--
operation="delete"-->
      </config>
    </cspf>
  </rsvp-instance>
</rsvp-te>
```

Command Syntax

```
lsp-reoptimization-timer <1-240>
```

Configure enable hello receipt

Use this attribute to enable the receipt of Hello messages from peers.

Attribute Name: enable-hello-receipt

Attribute Type: uint8

Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <rsvp-instance>
    <global>
      <hellos>
        <config>
          </enable-hello-receipt><!-- operation="delete"-->
        </config>
      </hellos>
    </global>
  </rsvp-instance>
</rsvp-te>
```

Command Syntax

```
hello-receipt
```

Configure enable graceful restart

Use this attribute to enable RSVP-TE Graceful Restart capability on a router. This is a global parameter. RSVP-TE determines whether or not to send the graceful restart capability object in its hello message. However, this capability also depends on support for graceful restart on the neighbor router.

Attribute Name: enable-graceful-restart

Attribute Type: uint8

Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <rsvp-instance>
    <global>
      <graceful-restart>
        <config>
          </enable-graceful-restart>
        </config>
      </graceful-restart>
    </global>
  </rsvp-instance>
</rsvp-te>
```

Command Syntax

```
graceful-restart
```

Configure hello interval

Use this attribute to set an interval between Hello packets. Used as a global command, this value is over-ridden by the hello-interval set on the interface (see rsvp hello-interval). For optimum performance, set this value no more than one-third of the hello-timeout value.

Attribute Name: hello-interval

Attribute Type: int32

Default Value: 2

Attribute Range: 1-65535

Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <rsvp-instance>
    <global>
      <hellos>
        <config>
          <hello-interval>1</hello-interval> <!-- operation="delete"-->
        </config>
      </hellos>
    </global>
  </rsvp-instance>
</rsvp-te>
```

Command Syntax

```
hello-interval <1-65535>
```

Configure hello timeout

Timeout for clearing up all sessions shared with a neighbor. If an LSR has not received a Hello message from a peer within the number of seconds set with this command, all sessions shared with this peer are reset. The hello-timeout determines how long an RSVP node waits for a hello message before declaring a neighbor to be down.

Attribute Name: hello-timeout

Attribute Type: int32

Default Value: 7

Attribute Range: 1-65535

Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <rsvp-instance>
    <global>
      <hellos>
        <config>
          <hello-timeout>1</hello-timeout> <!-- operation="delete"-->
        </config>
      </hellos>
    </global>
  </rsvp-instance>
```

```
</rsvp-te>
```

Command Syntax

```
hello-timeout <1-65535>
```

Configure restart time

Use this attribute to set a restart time for an RSVP-TE graceful restart configuration.

This command is supported when following feature are enabled grst feature

Attribute Name: restart-time

Attribute Type: uint32

Default Value: 180000

Attribute Range: 10000-600000

Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <rsvp-instance>
    <global>
      <graceful-restart>
        <config>
          <restart-time>10000</restart-time> <!-- operation="delete"-->
        </config>
      </graceful-restart>
    </global>
  </rsvp-instance>
</rsvp-te>
```

Command Syntax

```
graceful-restart restart-time <10000-600000>
```

Configure recovery time

Use this attribute to set a recovery time for an RSVP-TE graceful restart configuration.

This command is supported when following feature are enabled grst feature

Attribute Name: recovery-time

Attribute Type: uint32

Default Value: 360000

Attribute Range: 60000-3600000

Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <rsvp-instance>
    <global>
      <graceful-restart>
        <config>
          <recovery-time>60000</recovery-time> <!-- operation="delete"-->
        </config>
      </graceful-restart>
    </global>
  </rsvp-instance>
</rsvp-te>
```

```
</config>
</graceful-restart>
</global>
</rsvp-instance>
</rsvp-te>
```

Command Syntax

```
graceful-restart recovery-time <60000-3600000>
```

Configure enable gmpls notification

Use this attribute to enable a router's ability to send notification messages for all GMPLS LSPs configured on the box. This command can be used to enable or disable sending notification messages. By default, notification is enabled for all GMPLS LSPs configured on the box.

Attribute Name: enable-gmpls-notification

Attribute Type: uint8

Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <rsvp-instance>
    <gmpls>
      <config>
        </enable-gmpls-notification><!-- operation="delete"-->
      </config>
    </gmpls>
  </rsvp-instance>
</rsvp-te>
```

Command Syntax

```
notification
```

Configure enable pre program suggested label

Enable suggested label feature of gmpls

Attribute Name: enable-pre-program-suggested-label

Attribute Type: uint8

Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <rsvp-instance>
    <gmpls>
      <config>
        </enable-pre-program-suggested-label><!-- operation="delete"-->
      </config>
    </gmpls>
  </rsvp-instance>
</rsvp-te>
```

Command Syntax

preprogram-suggested-label

Configure srlg disjoint

Use the attribute to configure the srlg-disjoint path-protection in global mode

This command is supported when following feature are enabled Shared Risk Link Groups feature

Attribute Name: srlg-disjoint

Attribute Type: enum (forced|preferred)

Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <rsvp-instance>
    <srlg>
      <config>
        <srlg-disjoint>forced</srlg-disjoint> <!-- operation="delete"-->
      </config>
    </srlg>
  </rsvp-instance>
</rsvp-te>
```

Command Syntax

srlg-disjoint (forced|preferred)

Configure enable override diff serv

Setup a non-diffserv lsp if diffserv obj is not present in Path message

Attribute Name: enable-override-diff-serv

Attribute Type: uint8

Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <rsvp-instance>
    <diff-serv>
      <config>
        </enable-override-diff-serv><!-- operation="delete"-->
      </config>
    </diff-serv>
  </rsvp-instance>
</rsvp-te>
```

Command Syntax

override-diffserv

Configure address

Directly connected neighbor

Attribute Name: address

Attribute Type: inet:ip-address

Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <rsvp-instance>
    <neighbors>
      <neighbor> <!-- operation="delete"-->
        <address>CML_IP_ADDR_T</address>
        <config>
          <address>CML_IP_ADDR_T</address>
        </config>
      </neighbor>
    </neighbors>
  </rsvp-instance>
</rsvp-te>
```

Command Syntax

```
neighbor (A.B.C.D|X:X::X:X)
```

clear rsvp statistics

Netconf RPC payload

```
<clear-rsvp-statistics xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp"/>
```

Command Syntax

```
clear rsvp statistics
```

snmp restart rsvp

Netconf RPC payload

```
<rsvp-snmp-restart xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp"/>
```

Command Syntax

```
snmp restart rsvp
```

debug rsvp (events|packet|packet in|packet out|hexdump|nsm|cspf|fsm egress|fsm transit downstream|fsm transit upstream|fsm ingress|rib|neighbor|fsm|fsm transit|all)

Attribute Name: terminal-debug-options

Attribute Type: bits (events|packet|packet in|packet out|hexdump|nsm|cspf|fsm egress|fsm transit downstream|fsm transit upstream|fsm ingress|rib|neighbor|fsm|fsm transit|all)

Netconf RPC payload

```
<rsvp-terminal-debug-on xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
```

```
<terminal-debug-options>events</terminal-debug-options>
</rsvp-terminal-debug-on>
```

Command Syntax

```
debug rsvp (events|packet|packet in|packet out|hexdump|nsm|cspf|fsm egress|fsm
transit downstream|fsm transit upstream|fsm ingress|rib|neighbor|fsm|fsm
transit|all|)
```

no debug rsvp (events|packet|packet in|packet out|hexdump|nsm|cspf|fsm egress|fsm transit downstream|fsm transit upstream|fsm ingress|rib|neighbor|fsm|fsm transit|all|)

Attribute Name: terminal-debug-options

Attribute Type: bits (events|packet|packet in|packet out|hexdump|nsm|cspf|fsm egress|fsm transit downstream|fsm transit upstream|fsm ingress|rib|neighbor|fsm|fsm transit|all)

Netconf RPC payload

```
<rsvp-terminal-debug-off xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
<terminal-debug-options>events</terminal-debug-options>
</rsvp-terminal-debug-off>
```

Command Syntax

```
no debug rsvp (events|packet|packet in|packet out|hexdump|nsm|cspf|fsm egress|fsm
transit downstream|fsm transit upstream|fsm ingress|rib|neighbor|fsm|fsm
transit|all|)
```

restart rsvp graceful

Netconf RPC payload

```
<restart-rsvp-graceful xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp"/>
```

Command Syntax

```
restart rsvp graceful
```

IPI-RSVP-TRUNK

Configure path name

Use this attribute to configure the path

Attribute Name: path-name

Attribute Type: string

Attribute Range: 1-128

Attribute Name: path-type

Attribute Type: enum (mpls|gmpls)

Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <rsvp-paths>
    <rsvp-path>
      <path-name>PATHNAME</path-name>
      <config>
        <path-name>PATHNAME</path-name>
        <path-type>mpls</path-type>
      </config>
    </rsvp-path>
  </rsvp-paths>
</rsvp-te>
```

Command Syntax

```
rsvp-path PATHNAME (mpls|gmpls|)
```

Configure description

Use this attribute to add description for rsvp path

This command is supported when following feature are disabled Generic MPLS Tunnel Infra Feature

Attribute Name: description

Attribute Type: string

Attribute Range: 1-255

Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <rsvp-paths>
    <rsvp-path>
      <path-name>PATHNAME</path-name>
      <config>
        <path-name>PATHNAME</path-name>
        </config>
        <description>LINE</description> <!-- operation="delete"-->
      </rsvp-path>
    </rsvp-paths>
  </rsvp-te>
```

Command Syntax

```
description LINE
```

Configure hop address

Use this attribute to define an explicit IPv4 or IPv6 route sub-object as either loose or strict hop. A list of sub-objects specifies an explicit route to the egress router for an LSP

Attribute Name: hop-address

Attribute Type: inet:ipv4-address

Netconf edit-config payload

```

<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
<rsvp-paths>
<rsvp-path>
  <path-name>PATHNAME</path-name>
  <config>
    <path-name>PATHNAME</path-name>
  </config>
  <explicit-route-object>
  <mpls-hops>
  <mpls-hop> <!-- operation="delete"-->
    <hop-type>loose</hop-type>
    <config>
      <hop-type>loose</hop-type>
      <hop-address>A.B.C.D</hop-address>
    </config>
    <hop-address>A.B.C.D</hop-address>
  </mpls-hop>
</mpls-hops>
</explicit-route-object>
</rsvp-path>
</rsvp-paths>
</rsvp-te>

```

Command Syntax

A.B.C.D (loose|strict)

Configure strict hop address

Use this attribute to define an ERO path for a numbered (IPv4) interface. Only strict hops can be configured, and the strict type is implicit.

Attribute Name: strict-hop-address

Attribute Type: inet:ipv4-address

Netconf edit-config payload

```

<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
<rsvp-paths>
<rsvp-path>
  <path-name>PATHNAME</path-name>
  <config>
    <path-name>PATHNAME</path-name>
  </config>
  <explicit-route-object>
  <gmpls-strict-hops>
  <gmpls-strict-hop>
    <strict-hop-address>A.B.C.D</strict-hop-address>
    <config>
      <strict-hop-address>A.B.C.D</strict-hop-address>
    </config>
  </gmpls-strict-hop>
</gmpls-strict-hops>
</explicit-route-object>
</rsvp-path>
</rsvp-paths>
</rsvp-te>

```

```
</gmpls-strict-hop>
</gmpls-strict-hops>
</explicit-route-object>
</rsvp-path>
</rsvp-paths>
</rsvp-te>
```

Command Syntax

```
strict-hop A.B.C.D
```

Configure unnumbered ip addr

Use this attribute to define an ERO path for an unnumbered interface. Both the router ID and the link ID must be entered.

Attribute Name: unnumbered-ip-addr

Attribute Type: inet:ipv4-address

Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <rsvp-paths>
    <rsvp-path>
      <path-name>PATHNAME</path-name>
      <config>
        <path-name>PATHNAME</path-name>
      </config>
      <explicit-route-object>
        <gmpls-unnumbered-entry>
          <gmpls-unnumbered-hop>
            <link-id>1</link-id>
            <config>
              <link-id>1</link-id>
              <unnumbered-ip-addr>A.B.C.D</unnumbered-ip-addr>
            </config>
            <unnumbered-ip-addr>A.B.C.D</unnumbered-ip-addr>
          </gmpls-unnumbered-hop>
        </gmpls-unnumbered-entry>
      </explicit-route-object>
    </rsvp-path>
  </rsvp-paths>
</rsvp-te>
```

Command Syntax

```
unnumbered A.B.C.D link-id <1-4294967295>
```

Configure bypass name

rsvp trunk bypass name

Attribute Name: bypass-name

Attribute Type: string

Attribute Range: 1-32

Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <trunks>
    <bypass-trunks>
      <bypass-trunk>
        <bypass-name>BYPASSNAME</bypass-name>
        <config>
          <bypass-name>BYPASSNAME</bypass-name>
        </config>
      </bypass-trunk>
    </bypass-trunks>
  </trunks>
</rsvp-te>
```

Command Syntax

```
rsvp-bypass BYPASSNAME
```

Configure ingress

Use this attribute to specify a from IPv4 address for the RSVP daemon. In the RSVP trunk mode, this command indicates a sender's address in the sender template object that is used in path messages.

This command is supported when following feature are enabled MPLS-FRR feature

Attribute Name: ingress

Attribute Type: inet:ipv4-address

Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <trunks>
    <bypass-trunks>
      <bypass-trunk>
        <bypass-name>BYPASSNAME</bypass-name>
        <config>
          <bypass-name>BYPASSNAME</bypass-name>
          <ingress>A.B.C.D</ingress> <!-- operation="delete"-->
        </config>
      </bypass-trunk>
    </bypass-trunks>
  </trunks>
</rsvp-te>
```

Command Syntax

```
from A.B.C.D
```

Configure egress

Use this attribute to specify an IPv4 egress for an LSP. When configuring an LSP, you must specify the address of the egress router by using this command in the trunk node. An egress definition is a mandatory attribute; no RSVP session is created when an egress is not defined.

This command is supported when following feature are enabled MPLS-FRR feature

Attribute Name: egress

Attribute Type: inet:ipv4-address

Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <trunks>
    <bypass-trunks>
      <bypass-trunk>
        <bypass-name>BYPASSNAME</bypass-name>
        <config>
          <bypass-name>BYPASSNAME</bypass-name>
        </config>
        <egress>A.B.C.D</egress> <!-- operation="delete"-->
      </bypass-trunk>
    </bypass-trunks>
  </trunks>
</rsvp-te>
```

Command Syntax

```
to A.B.C.D
```

Configure ext tunnel id

Use this attribute to configure an extended-tunnel identifier as an IPv4/IPv6 address. These identifiers are used in RSVP messages. If no extended-tunnel ID is specified, the LSR-ID for the router is used as the extended-tunnel ID for all LSPs. The extended-tunnel ID is a simple way of identifying all LSPs belonging to the same trunk.

This command is supported when following feature are enabled MPLS-FRR feature

Attribute Name: ext-tunnel-id

Attribute Type: inet:ipv4-address

Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <trunks>
    <bypass-trunks>
      <bypass-trunk>
        <bypass-name>BYPASSNAME</bypass-name>
        <config>
          <bypass-name>BYPASSNAME</bypass-name>
        </config>
        <ext-tunnel-id>A.B.C.D</ext-tunnel-id> <!-- operation="delete"-->
      </bypass-trunk>
    </bypass-trunks>
  </trunks>
</rsvp-te>
```

```
</trunks>
</rsvp-te>
```

Command Syntax

```
ext-tunnel-id A.B.C.D
```

Configure update type

Use this attribute to change the method of updating attributes for sessions (primary/ secondary) for this trunk as either make-before-break (default) or break-before-make

This command is supported when following feature are enabled MPLS-FRR feature

Attribute Name: update-type

Attribute Type: enum (break-before-make|make-before-break)

Default Value: make-before-break

Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <trunks>
    <bypass-trunks>
      <bypass-trunk>
        <bypass-name>BYPASSNAME</bypass-name>
        <config>
          <bypass-name>BYPASSNAME</bypass-name>
        </config>
        <update-type>make-before-break</update-type> <!-- operation="delete"-->
      </bypass-trunk>
    </bypass-trunks>
  </trunks>
</rsvp-te>
```

Command Syntax

```
update-type (break-before-make|make-before-break)
```

Configure description

Use this attribute to add description for rsvp tunnel

This command is supported when following feature are enabled MPLS-FRR feature

Attribute Name: description

Attribute Type: string

Attribute Range: 1-255

Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <trunks>
    <bypass-trunks>
      <bypass-trunk>
```

```
<bypass-name>BYPASSNAME</bypass-name>
<config>
  <bypass-name>BYPASSNAME</bypass-name>
</config>
  <description>LINE</description> <!-- operation="delete"-->
</bypass-trunk>
</bypass-trunks>
</trunks>
</rsvp-te>
```

Command Syntax

description LINE

Configure backup bandwidth type

rsvp bypass trunk backup bandwidth type

This command is supported when following feature are enabled MPLS-FRR feature

Attribute Name: backup-bandwidth-type

Attribute Type: enum (best-effort|dedicated)

Default Value: best-effort

Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <trunks>
    <bypass-trunks>
      <bypass-trunk>
        <bypass-name>BYPASSNAME</bypass-name>
        <config>
          <bypass-name>BYPASSNAME</bypass-name>
        </config>
        <backup-bandwidth-type>best-effort</backup-bandwidth-type> <!--
operation="delete"-->
      </bypass-trunk>
    </bypass-trunks>
  </trunks>
</rsvp-te>
```

Command Syntax

backup-bw-type (best-effort|dedicated)

Configure disable route record

Use this attribute to enable recording of the route taken by Path and Reservation Request (Resv) messages. These messages confirm the establishment of reservations and also identifies errors. Routes are recorded by means of the Route Record Object (RRO) in the RSVP message.

Attribute Name: disable-route-record

Attribute Type: uint8

Netconf edit-config payload

```

<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
<trunks>
<bypass-trunks>
<bypass-trunk>
  <bypass-name>BYPASSNAME</bypass-name>
  <config>
    <bypass-name>BYPASSNAME</bypass-name>
  </config>
</session>
<config>
  </disable-route-record><!-- operation="delete"-->
</config>
</session>
</bypass-trunk>
</bypass-trunks>
</trunks>
</rsvp-te>

```

Command Syntax

```
no record
```

Configure enable reuse route record

Use this attribute to use the updated Route Record List as an Explicit Route (with all strict nodes) when a path message is sent out at the next refresh.

Attribute Name: enable-reuse-route-record

Attribute Type: uint8

Netconf edit-config payload

```

<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
<trunks>
<bypass-trunks>
<bypass-trunk>
  <bypass-name>BYPASSNAME</bypass-name>
  <config>
    <bypass-name>BYPASSNAME</bypass-name>
  </config>
</session>
<config>
  </enable-reuse-route-record><!-- operation="delete"-->
</config>
</session>
</bypass-trunk>
</bypass-trunks>
</trunks>
</rsvp-te>

```

Command Syntax

reuse-route-record

Configure traffic type

Use this attribute to identify the traffic type for this RSVP Trunk/bypss/P2MP LSP's

This command is supported when following feature are enabled MPLS-FRR feature

Attribute Name: traffic-type

Attribute Type: enum (controlled-load|guaranteed)

Default Value: controlled-load

Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <trunks>
    <bypass-trunks>
      <bypass-trunk>
        <bypass-name>BYPASSNAME</bypass-name>
        <config>
          <bypass-name>BYPASSNAME</bypass-name>
        </config>
      <session>
        <config>
          <traffic-type>controlled-load</traffic-type> <!-- operation="delete"-->
        </config>
      </session>
    </bypass-trunk>
  </bypass-trunks>
</trunks>
</rsvp-te>
```

Command Syntax

traffic (controlled-load|guaranteed)

Configure retry count

Use this attribute to specify a retry count for an RSVP Trunk.

This command is supported when following feature are enabled MPLS-FRR feature

Attribute Name: retry-count

Attribute Type: uint16

Attribute Range: 1-65535

Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <trunks>
    <bypass-trunks>
      <bypass-trunk>
```

```

    <bypass-name>BYPASSNAME</bypass-name>
  <config>
    <bypass-name>BYPASSNAME</bypass-name>
  </config>
</session>
<config>
  <retry-count>1</retry-count> <!-- operation="delete"-->
</config>
</session>
</bypass-trunk>
</bypass-trunks>
</trunks>
</rsvp-te>

```

Command Syntax

```
retry-limit <1-65535>
```

Configure retry interval

Use this attribute to specify a retry interval for an RSVP Trunk. When an ingress node tries to configure an LSP and the setup fails due to the receipt of a Path Error message, the system waits for the time configured with this command, before retrying the LSP setup process

This command is supported when following feature are enabled MPLS-FRR feature

Attribute Name: retry-interval

Attribute Type: uint16

Default Value: 30

Attribute Range: 1-600

Netconf edit-config payload

```

<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <trunks>
    <bypass-trunks>
      <bypass-trunk>
        <bypass-name>BYPASSNAME</bypass-name>
        <config>
          <bypass-name>BYPASSNAME</bypass-name>
        </config>
        <session>
          <config>
            <retry-interval>1</retry-interval> <!-- operation="delete"-->
          </config>
        </session>
      </bypass-trunk>
    </bypass-trunks>
  </trunks>
</rsvp-te>

```

Command Syntax

```
retry-timer <1-600>
```

Configure cspf retry count

Use this attribute to specify the number of retries that CSPF should carry out for a request received from RSVP.

This command is supported when following feature are enabled MPLS-FRR feature

Attribute Name: cspf-retry-count

Attribute Type: uint16

Attribute Range: 1-65535

Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <trunks>
    <bypass-trunks>
      <bypass-trunk>
        <bypass-name>BYPASSNAME</bypass-name>
        <config>
          <bypass-name>BYPASSNAME</bypass-name>
        </config>
      <session>
        <config>
          <cspf-retry-count>1</cspf-retry-count> <!-- operation="delete"-->
        </config>
      </session>
    </bypass-trunk>
  </bypass-trunks>
</trunks>
</rsvp-te>
```

Command Syntax

```
cspf-retry-limit <1-65535>
```

Configure cspf retry interval

Use this attribute to specify the time between each retry that CSPF might carry out for a request received from RSVP.

This command is supported when following feature are enabled MPLS-FRR feature

Attribute Name: cspf-retry-interval

Attribute Type: uint16

Default Value: 30

Attribute Range: 1-600

Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <trunks>
    <bypass-trunks>
```

```

<bypass-trunk>
  <bypass-name>BYPASSNAME</bypass-name>
  <config>
    <bypass-name>BYPASSNAME</bypass-name>
  </config>
  <session>
    <config>
      <cspf-retry-interval>1</cspf-retry-interval> <!-- operation="delete"-->
    </config>
  </session>
</bypass-trunk>
</bypass-trunks>
</trunks>
</rsvp-te>

```

Command Syntax

```
cspf-retry-timer <1-600>
```

Configure exclude addr

Use this attribute to exclude an address link or address node from the LSP creation of the Bypass Tunnel.

Attribute Name: exclude-addr

Attribute Type: inet:ipv4-address

Attribute Name: exclude-type

Attribute Type: enum (link|node)

Netconf edit-config payload

```

<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <trunks>
    <bypass-trunks>
      <bypass-trunk>
        <bypass-name>BYPASSNAME</bypass-name>
        <config>
          <bypass-name>BYPASSNAME</bypass-name>
        </config>
        <session>
          <exclude-path>
            <config>
              <exclude-type>node</exclude-type>
              <exclude-addr>A.B.C.D</exclude-addr>
            </config>
          </exclude-path>
        </session>
      </bypass-trunk>
    </bypass-trunks>
  </trunks>
</rsvp-te>

```

Command Syntax

```
exclude-address (link|node) A.B.C.D
```

Configure path name

Use this attribute to specify an RSVP path to be used. The PATHNAME in this command is the string (name) used to identify an RSVP path defined for the node

This command is supported when following feature are enabled MPLS-FRR feature

Attribute Name: path-name

Attribute Type: string

Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <trunks>
    <bypass-trunks>
      <bypass-trunk>
        <bypass-name>BYPASSNAME</bypass-name>
        <config>
          <bypass-name>BYPASSNAME</bypass-name>
        </config>
      <session>
        <path-state-block>
          <config>
            <path-name>PATHNAME</path-name> <!-- operation="delete"-->
          </config>
        </path-state-block>
      </session>
    </bypass-trunk>
  </bypass-trunks>
</trunks>
</rsvp-te>
```

Command Syntax

```
path PATHNAME
```

Configure bandwidth

Use this attribute to reserve the primary/secondary bandwidth in bits per second for the current trunk.

This command is supported when following feature are enabled MPLS-FRR feature

Attribute Name: bandwidth

Attribute Type: string

Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <trunks>
    <bypass-trunks>
      <bypass-trunk>
```

```

    <bypass-name>BYPASSNAME</bypass-name>
  <config>
    <bypass-name>BYPASSNAME</bypass-name>
  </config>
</session>
<path-state-block>
<config>
  <bandwidth>BANDWIDTH</bandwidth> <!-- operation="delete"-->
</config>
</path-state-block>
</session>
</bypass-trunk>
</bypass-trunks>
</trunks>
</rsvp-te>

```

Command Syntax

```
bandwidth BANDWIDTH
```

Configure enable label record

Use this attribute to record all labels exchanged between RSVP-enabled routers during the reservation setup process

Attribute Name: enable-label-record

Attribute Type: uint8

Netconf edit-config payload

```

<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <trunks>
    <bypass-trunks>
      <bypass-trunk>
        <bypass-name>BYPASSNAME</bypass-name>
        <config>
          <bypass-name>BYPASSNAME</bypass-name>
        </config>
        <session>
          <path-state-block>
            <session-attributes>
              <config>
                </enable-label-record><!-- operation="delete"-->
              </config>
            </session-attributes>
          </path-state-block>
        </session>
      </bypass-trunk>
    </bypass-trunks>
  </trunks>
</rsvp-te>

```

Command Syntax

label-record

Configure hold priority

Use this attribute to configure the hold priority value for the selected trunk.

This command is supported when following feature are enabled MPLS-FRR feature

Attribute Name: hold-priority

Attribute Type: uint8

Default Value: 0

Attribute Range: 0-7

Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <trunks>
    <bypass-trunks>
      <bypass-trunk>
        <bypass-name>BYPASSNAME</bypass-name>
        <config>
          <bypass-name>BYPASSNAME</bypass-name>
        </config>
      <session>
        <path-state-block>
          <session-attributes>
            <config>
              <hold-priority>0</hold-priority> <!-- operation="delete"-->
            </config>
          </session-attributes>
        </path-state-block>
      </session>
    </bypass-trunk>
  </bypass-trunks>
</trunks>
</rsvp-te>
```

Command Syntax

hold-priority <0-7>

Configure setup priority

Use this attribute to configure the setup priority value for the selected trunk

This command is supported when following feature are enabled MPLS-FRR feature

Attribute Name: setup-priority

Attribute Type: uint8

Default Value: 7

Attribute Range: 0-7

Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <trunks>
    <bypass-trunks>
      <bypass-trunk>
        <bypass-name>BYPASSNAME</bypass-name>
        <config>
          <bypass-name>BYPASSNAME</bypass-name>
        </config>
      </bypass-trunk>
    </bypass-trunks>
  </trunks>
</rsvp-te>
```

Command Syntax

```
setup-priority <0-7>
```

Configure hop limit

Use this attribute to specify a limit of hops for an RSVP trunk. Hop-limit data is sent to the CSPF server if CSPF is used.

This command is supported when following feature are enabled MPLS-FRR feature

Attribute Name: hop-limit

Attribute Type: uint16

Default Value: 255

Attribute Range: 1-255

Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <trunks>
    <bypass-trunks>
      <bypass-trunk>
        <bypass-name>BYPASSNAME</bypass-name>
        <config>
          <bypass-name>BYPASSNAME</bypass-name>
        </config>
      </bypass-trunk>
    </bypass-trunks>
  </trunks>
</rsvp-te>
```

```
<session-attributes>
<config>
  <hop-limit>1</hop-limit> <!-- operation="delete"-->
</config>
</session-attributes>
</path-state-block>
</session>
</bypass-trunk>
</bypass-trunks>
</trunks>
</rsvp-te>
```

Command Syntax

```
hop-limit <1-255>
```

Configure filter type

Use this attribute to set the filter to fixed or shared filter style for RSVP trunk.

This command is supported when following feature are enabled MPLS-FRR feature

Attribute Name: filter-type

Attribute Type: enum (fixed|shared-explicit)

Default Value: shared-explicit

Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
<trunks>
<bypass-trunks>
<bypass-trunk>
  <bypass-name>BYPASSNAME</bypass-name>
  <config>
    <bypass-name>BYPASSNAME</bypass-name>
  </config>
<session>
<path-state-block>
<session-attributes>
<config>
  <filter-type>shared-explicit</filter-type> <!-- operation="delete"-->
</config>
</session-attributes>
</path-state-block>
</session>
</bypass-trunk>
</bypass-trunks>
</trunks>
</rsvp-te>
```

Command Syntax

```
filter (fixed)
```

Configure bandwidth

Use this attribute to reserve the primary/secondary bandwidth in bits per second for the current trunk.

This command is supported when following feature are enabled MPLS-FRR feature

Attribute Name: bandwidth

Attribute Type: string

Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <trunks>
    <bypass-trunks>
      <bypass-trunk>
        <bypass-name>BYPASSNAME</bypass-name>
        <config>
          <bypass-name>BYPASSNAME</bypass-name>
        </config>
      </bypass-trunk>
    </bypass-trunks>
  </trunks>
  <session>
    <path-state-block>
      <session-attributes>
        <config>
          <bandwidth>BANDWIDTH</bandwidth> <!-- operation="delete"-->
        </config>
      </session-attributes>
    </path-state-block>
  </session>
</rsvp-te>
```

Command Syntax

```
bandwidth BANDWIDTH
```

Configure llsp class

to configure a Differentiated Services Label-Only-Inferred-PSC (Diff-Serv L-LSP) that uses Diff-Serv Class as its PHB Scheduling Class (PSC).

This command is supported when following feature are enabled MPLS-FRR feature,diffserv feature

Attribute Name: llsp-class

Attribute Type: string

Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <trunks>
    <bypass-trunks>
      <bypass-trunk>
        <bypass-name>BYPASSNAME</bypass-name>
```

```
<config>
  <bypass-name>BYPASSNAME</bypass-name>
</config>
<session>
  <diff-serv-info>
    <config>
      <llsp-class>0</llsp-class> <!-- operation="delete"-->
    </config>
  </diff-serv-info>
</session>
</bypass-trunk>
</bypass-trunks>
</trunks>
</rsvp-te>
```

Command Syntax

```
llsp class <0-7>
```

Configure dscp exp map exp val

rsvp trunk dsinfo exp val

Attribute Name: dscp-exp-map-exp-val

Attribute Type: int32

Attribute Range: 0-7

Attribute Name: dscp-exp-map-class-name

Attribute Type: string

Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <trunks>
    <bypass-trunks>
      <bypass-trunk>
        <bypass-name>BYPASSNAME</bypass-name>
        <config>
          <bypass-name>BYPASSNAME</bypass-name>
        </config>
        <session>
          <diff-serv-info>
            <dscp-exp-maps>
              <dscp-exp-map>
                <dscp-exp-map-exp-val>0</dscp-exp-map-exp-val>
                <config>
                  <dscp-exp-map-exp-val>0</dscp-exp-map-exp-val>
                  <dscp-exp-map-class-name>CLASS</dscp-exp-map-class-name>
                </config>
              </dscp-exp-map>
            </dscp-exp-maps>
          </diff-serv-info>
```

```
</session>
</bypass-trunk>
</bypass-trunks>
</trunks>
</rsvp-te>
```

Command Syntax

```
class-to-exp-bit (CLASS|<0-7>) <0-7>
```

Configure trunk name

rsvp trunk name

Attribute Name: trunk-name

Attribute Type: string

Attribute Range: 1-32

Attribute Name: trunk-family

Attribute Type: enum (gmpls|ipv4)

Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <trunks>
    <ingress-trunks>
      <ingress-trunk>
        <trunk-name>TRUNKNAME</trunk-name>
        <config>
          <trunk-name>TRUNKNAME</trunk-name>
          <trunk-family>ipv4</trunk-family>
        </config>
      </ingress-trunk>
    </ingress-trunks>
  </trunks>
</rsvp-te>
```

Command Syntax

```
rsvp-trunk TRUNKNAME (gmpls|ipv4|)
```

Configure enable igp shortcut

Use this attribute to enable Interior Gateway Protocol (IGP) Shortcut. With IGP Shortcut, link-state IGPs calculate IP routes to forward traffic over tunnels configured by TE.

Attribute Name: enable-igp-shortcut

Attribute Type: uint8

Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <trunks>
    <ingress-trunks>
```

```
<ingress-trunk>
  <trunk-name>TRUNKNAME</trunk-name>
  <config>
    <trunk-name>TRUNKNAME</trunk-name>
  </config>
  </enable-igp-shortcut><!-- operation="delete"-->
</ingress-trunk>
</ingress-trunks>
</trunks>
</rsvp-te>
```

Command Syntax

```
enable-igp-shortcut
```

Configure enable reoptimize

Use this attribute to enable the reoptimization for the RSVP Trunk

Attribute Name: enable-reoptimize

Attribute Type: uint8

Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <trunks>
    <ingress-trunks>
      <ingress-trunk>
        <trunk-name>TRUNKNAME</trunk-name>
        <config>
          <trunk-name>TRUNKNAME</trunk-name>
        </config>
        </enable-reoptimize><!-- operation="delete"-->
      </ingress-trunk>
    </ingress-trunks>
  </trunks>
</rsvp-te>
```

Command Syntax

```
reoptimize
```

Configure ingress

Use this attribute to specify a from IPv4 address for the RSVP daemon. In the RSVP trunk mode, this command indicates a sender's address in the sender template object that is used in path messages.

Attribute Name: ingress

Attribute Type: inet:ipv4-address

Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <trunks>
```

```

<ingress-trunks>
<ingress-trunk>
  <trunk-name>TRUNKNAME</trunk-name>
  <config>
    <trunk-name>TRUNKNAME</trunk-name>
  </config>
  <ingress>A.B.C.D</ingress> <!-- operation="delete"-->
</ingress-trunk>
</ingress-trunks>
</trunks>
</rsvp-te>

```

Command Syntax

from A.B.C.D

Configure egress

Use this attribute to specify an IPv4 egress for an LSP. When configuring an LSP, you must specify the address of the egress router by using this command in the trunk node. An egress definition is a mandatory attribute; no RSVP session is created when an egress is not defined.

Attribute Name: egress

Attribute Type: inet:ipv4-address

Netconf edit-config payload

```

<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
<trunks>
<ingress-trunks>
<ingress-trunk>
  <trunk-name>TRUNKNAME</trunk-name>
  <config>
    <trunk-name>TRUNKNAME</trunk-name>
  </config>
  <egress>A.B.C.D</egress> <!-- operation="delete"-->
</ingress-trunk>
</ingress-trunks>
</trunks>
</rsvp-te>

```

Command Syntax

to A.B.C.D

Configure ext tunnel id

Use this attribute to configure an extended-tunnel identifier as an IPv4/IPv6 address. These identifiers are used in RSVP messages. If no extended-tunnel ID is specified, the LSR-ID for the router is used as the extended-tunnel ID for all LSPs. The extended-tunnel ID is a simple way of identifying all LSPs belonging to the same trunk.

Attribute Name: ext-tunnel-id

Attribute Type: inet:ipv4-address

Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <trunks>
    <ingress-trunks>
      <ingress-trunk>
        <trunk-name>TRUNKNAME</trunk-name>
        <config>
          <trunk-name>TRUNKNAME</trunk-name>
        </config>
        <ext-tunnel-id>A.B.C.D</ext-tunnel-id> <!-- operation="delete"-->
      </ingress-trunk>
    </ingress-trunks>
  </trunks>
</rsvp-te>
```

Command Syntax

```
ext-tunnel-id A.B.C.D
```

Configure update type

Use this attribute to change the method of updating attributes for sessions (primary/ secondary) for this trunk as either make-before-break (default) or break-before-make

Attribute Name: update-type

Attribute Type: enum (break-before-make|make-before-break)

Default Value: make-before-break

Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <trunks>
    <ingress-trunks>
      <ingress-trunk>
        <trunk-name>TRUNKNAME</trunk-name>
        <config>
          <trunk-name>TRUNKNAME</trunk-name>
          <update-type>make-before-break</update-type> <!-- operation="delete"-->
        </config>
      </ingress-trunk>
    </ingress-trunks>
  </trunks>
</rsvp-te>
```

Command Syntax

```
update-type (break-before-make|make-before-break)
```

Configure description

Use this attribute to add description for rsvp tunnel

Attribute Name: description

Attribute Type: string

Attribute Range: 1-255

Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <trunks>
    <ingress-trunks>
      <ingress-trunk>
        <trunk-name>TRUNKNAME</trunk-name>
        <config>
          <trunk-name>TRUNKNAME</trunk-name>
        </config>
        <description>LINE</description> <!-- operation="delete"-->
      </ingress-trunk>
    </ingress-trunks>
  </trunks>
</rsvp-te>
```

Command Syntax

```
description LINE
```

Configure absolute metric

Use this attribute to set LSP absolute metric metric for IGP Shortcut use

Attribute Name: absolute-metric

Attribute Type: uint32

Attribute Range: 1-65535

Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <trunks>
    <ingress-trunks>
      <ingress-trunk>
        <trunk-name>TRUNKNAME</trunk-name>
        <config>
          <trunk-name>TRUNKNAME</trunk-name>
        </config>
        <absolute-metric>1</absolute-metric> <!-- operation="delete"-->
      </ingress-trunk>
    </ingress-trunks>
  </trunks>
</rsvp-te>
```

Command Syntax

```
lsp-metric absolute-metric <1-65535>
```

Configure relative metric

Use this attribute to set LSP relative metric metric for IGP Shortcut use

Attribute Name: relative-metric

Attribute Type: int32

Attribute Range: -65535-0,1-65535

Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <trunks>
    <ingress-trunks>
      <ingress-trunk>
        <trunk-name>TRUNKNAME</trunk-name>
        <config>
          <trunk-name>TRUNKNAME</trunk-name>
        </config>
        <relative-metric>-65535</relative-metric> <!-- operation="delete"-->
      </ingress-trunk>
    </ingress-trunks>
  </trunks>
</rsvp-te>
```

Command Syntax

```
lsp-metric relative (<-65535-0>|<1-65535>)
```

Configure revert timer

Use this attribute configure the Hold-on timer before revert back to RSVP session

Attribute Name: revert-timer

Attribute Type: uint32

Default Value: 60

Attribute Range: 1-65535

Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <trunks>
    <ingress-trunks>
      <ingress-trunk>
        <trunk-name>TRUNKNAME</trunk-name>
        <config>
          <trunk-name>TRUNKNAME</trunk-name>
        </config>
        <revert-timer>1</revert-timer> <!-- operation="delete"-->
      </ingress-trunk>
    </ingress-trunks>
  </trunks>
</rsvp-te>
```

Command Syntax

```
revert-timer <1-65535>
```

Configure bsid value

Use this attribute to configure static binding segment identifier value

Attribute Name: bsid-value

Attribute Type: uint32

Attribute Range: 16-15999

Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <trunks>
    <ingress-trunks>
      <ingress-trunk>
        <trunk-name>TRUNKNAME</trunk-name>
        <config>
          <trunk-name>TRUNKNAME</trunk-name>
        </config>
        <bsid-value>16</bsid-value> <!-- operation="delete"-->
      </ingress-trunk>
    </ingress-trunks>
  </trunks>
</rsvp-te>
```

Command Syntax

```
binding-sid mpls label <16-15999>
```

Configure switching capability

Use this attribute to configure a switching capability for the RSVP Trunk

This command is supported when following feature are enabled gmpls feature

Attribute Name: switching-capability

Attribute Type: enum (psc-1|psc-2|psc-3|psc-4)

Default Value: psc-1

Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <trunks>
    <ingress-trunks>
      <ingress-trunk>
        <trunk-name>TRUNKNAME</trunk-name>
        <config>
          <trunk-name>TRUNKNAME</trunk-name>
        </config>
        <gmpls>

```

```
<config>
  <switching-capability>psc-1</switching-capability> <!--
operation="delete"-->
</config>
</gmpls>
</ingress-trunk>
</ingress-trunks>
</trunks>
</rsvp-te>
```

Command Syntax

capability (psc-1|psc-2|psc-3|psc-4)

Configure direction

Use this attribute to configure a direction for the RSVP Trunk

This command is supported when following feature are enabled gmpls feature

Attribute Name: direction

Attribute Type: enum (unidirectional|bidirectional)

Default Value: unidirectional

Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <trunks>
    <ingress-trunks>
      <ingress-trunk>
        <trunk-name>TRUNKNAME</trunk-name>
        <config>
          <trunk-name>TRUNKNAME</trunk-name>
        </config>
      </ingress-trunk>
    </ingress-trunks>
  </trunks>
  <config>
    <direction>unidirectional</direction> <!-- operation="delete"-->
  </config>
</rsvp-te>
```

Command Syntax

direction (unidirectional|bidirectional)

Configure generalized pid

Use this attribute to configure a generalized PID for the RSVP Trunk

This command is supported when following feature are enabled gmpls feature

Attribute Name: generalized-pid

Attribute Type: enum (ethernet|ipv4)

Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <trunks>
    <ingress-trunks>
      <ingress-trunk>
        <trunk-name>TRUNKNAME</trunk-name>
        <config>
          <trunk-name>TRUNKNAME</trunk-name>
        </config>
        <gmpls>
          <config>
            <generalized-pid>ethernet</generalized-pid> <!-- operation="delete"-->
          </config>
        </gmpls>
      </ingress-trunk>
    </ingress-trunks>
  </trunks>
</rsvp-te>
```

Command Syntax

```
gpid (ethernet|ipv4)
```

Configure address

rsvp trunk ipv4 map route address

Attribute Name: address

Attribute Type: string

Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <trunks>
    <ingress-trunks>
      <ingress-trunk>
        <trunk-name>TRUNKNAME</trunk-name>
        <config>
          <trunk-name>TRUNKNAME</trunk-name>
          </config>
          <mapped-ip-routes>
            <mapped-ip-route>
              <address>A.B.C.D/M</address>
              <config>
                <address>A.B.C.D/M|A.B.C.D A.B.C.D</address>
              </config>
            </mapped-ip-route>
          </mapped-ip-routes>
        </ingress-trunk>
      </ingress-trunks>
    </trunks>
  </rsvp-te>
```

```
</ingress-trunks>
</trunks>
</rsvp-te>
```

Command Syntax

```
map-route (A.B.C.D/M|A.B.C.D A.B.C.D)
```

Configure dst addr

rsvp trunk map route address

Attribute Name: dst-addr

Attribute Type: string

Attribute Name: name

Attribute Type: string

Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <trunks>
    <ingress-trunks>
      <ingress-trunk>
        <trunk-name>TRUNKNAME</trunk-name>
        <config>
          <trunk-name>TRUNKNAME</trunk-name>
        </config>
        <mapped-prefix-class-routes>
          <mapped-prefix-class-route>
            <dst-addr>A.B.C.D/M</dst-addr>
            <config>
              <dst-addr>A.B.C.D/M</dst-addr>
              <name>CLASS</name>
            </config>
          </mapped-prefix-class-route>
        </mapped-prefix-class-routes>
      </ingress-trunk>
    </ingress-trunks>
  </trunks>
</rsvp-te>
```

Command Syntax

```
map-route (A.B.C.D/M|A.B.C.D A.B.C.D) CLASS
```

Configure priority value

Use this attribute to configure the secondary priorities of the RSVP Trunk.

Attribute Name: priority-value

Attribute Type: int32

Attribute Range: 1-5

Netconf edit-config payload

```

<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <trunks>
    <ingress-trunks>
      <ingress-trunk>
        <trunk-name>TRUNKNAME</trunk-name>
        <config>
          <trunk-name>TRUNKNAME</trunk-name>
        </config>
        <secondary-priorities>
          <secondary-priority> <!-- operation="delete"-->
            <priority-value>1</priority-value>
            <config>
              <priority-value>1</priority-value>
            </config>
          </secondary-priority>
        </secondary-priorities>
      </ingress-trunk>
    </ingress-trunks>
  </trunks>
</rsvp-te>

```

Command Syntax

```
secondary-priority <1-5>
```

Configure enable label record

Use this attribute to configure the secondary label record for the RSVP Trunk.

Attribute Name: enable-label-record

Attribute Type: uint8

Netconf edit-config payload

```

<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <trunks>
    <ingress-trunks>
      <ingress-trunk>
        <trunk-name>TRUNKNAME</trunk-name>
        <config>
          <trunk-name>TRUNKNAME</trunk-name>
        </config>
        <secondary-priorities>
          <secondary-priority>
            <priority-value>1</priority-value>
            <config>
              <priority-value>1</priority-value>
            </config>
            </enable-label-record><!-- operation="delete"-->
          </secondary-priority>
        </secondary-priorities>
      </ingress-trunk>
    </ingress-trunks>
  </trunks>
</rsvp-te>

```

```
</ingress-trunk>
</ingress-trunks>
</trunks>
</rsvp-te>
```

Command Syntax

```
secondary-priority <1-5> label-record
```

Configure priority path

Use this attribute to configure the secondary priority path for the RSVP Trunk.

Attribute Name: priority-path

Attribute Type: string

Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <trunks>
    <ingress-trunks>
      <ingress-trunk>
        <trunk-name>TRUNKNAME</trunk-name>
        <config>
          <trunk-name>TRUNKNAME</trunk-name>
        </config>
        <secondary-priorities>
          <secondary-priority>
            <priority-value>1</priority-value>
            <config>
              <priority-value>1</priority-value>
              <priority-path>PATHNAME</priority-path> <!-- operation="delete"-->
            </config>
          </secondary-priority>
        </secondary-priorities>
      </ingress-trunk>
    </ingress-trunks>
  </trunks>
</rsvp-te>
```

Command Syntax

```
secondary-priority <1-5> path PATHNAME
```

Configure secondary priority srlg disjoint

Use this attribute to configure the SRLG disjoint path for the RSVP Trunk.

Attribute Name: secondary-priority-srlg-disjoint

Attribute Type: enum (forced|preferred)

Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
```

```

<trunks>
<ingress-trunks>
<ingress-trunk>
  <trunk-name>TRUNKNAME</trunk-name>
  <config>
    <trunk-name>TRUNKNAME</trunk-name>
  </config>
  <secondary-priorities>
  <secondary-priority>
    <priority-value>1</priority-value>
    <config>
      <priority-value>1</priority-value>
    </config>
    <secondary-priority-srlg-disjoint>forced</secondary-priority-srlg-
disjoint> <!-- operation="delete"-->
  </secondary-priority>
</secondary-priorities>
</ingress-trunk>
</ingress-trunks>
</trunks>
</rsvp-te>

```

Command Syntax

```
secondary-priority <1-5> srlg-disjoint (forced|preferred)
```

Configure hold priority

Use this attribute to configure the secondary hold priority for the RSVP Trunk.

Attribute Name: hold-priority

Attribute Type: uint8

Default Value: 0

Attribute Range: 0-7

Netconf edit-config payload

```

<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
<trunks>
<ingress-trunks>
<ingress-trunk>
  <trunk-name>TRUNKNAME</trunk-name>
  <config>
    <trunk-name>TRUNKNAME</trunk-name>
  </config>
  <secondary-priorities>
  <secondary-priority>
    <priority-value>1</priority-value>
    <config>
      <priority-value>1</priority-value>
    </config>
    <hold-priority>0</hold-priority> <!-- operation="delete"-->
  </secondary-priority>
</secondary-priorities>
</ingress-trunk>
</ingress-trunks>
</trunks>
</rsvp-te>

```

```
</secondary-priority>
</secondary-priorities>
</ingress-trunk>
</ingress-trunks>
</trunks>
</rsvp-te>
```

Command Syntax

```
secondary-priority <1-5> hold-priority <0-7>
```

Configure setup priority

Use this attribute to configure the secondary setup priority for the RSVP Trunk.

Attribute Name: setup-priority

Attribute Type: uint8

Default Value: 7

Attribute Range: 0-7

Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
<trunks>
<ingress-trunks>
<ingress-trunk>
  <trunk-name>TRUNKNAME</trunk-name>
  <config>
    <trunk-name>TRUNKNAME</trunk-name>
  </config>
  <secondary-priorities>
  <secondary-priority>
    <priority-value>1</priority-value>
    <config>
      <priority-value>1</priority-value>
    </config>
    <setup-priority>0</setup-priority> <!-- operation="delete"-->
  </secondary-priority>
</secondary-priorities>
</ingress-trunk>
</ingress-trunks>
</trunks>
</rsvp-te>
```

Command Syntax

```
secondary-priority <1-5> setup-priority <0-7>
```

Configure hop limit

Use this attribute to configure the secondary hop limit for the RSVP Trunk.

Attribute Name: hop-limit

Attribute Type: uint16

Default Value: 255

Attribute Range: 1-255

Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <trunks>
    <ingress-trunks>
      <ingress-trunk>
        <trunk-name>TRUNKNAME</trunk-name>
        <config>
          <trunk-name>TRUNKNAME</trunk-name>
        </config>
        <secondary-priorities>
          <secondary-priority>
            <priority-value>1</priority-value>
            <config>
              <priority-value>1</priority-value>
            </config>
            <hop-limit>1</hop-limit> <!-- operation="delete"-->
          </secondary-priority>
        </secondary-priorities>
      </ingress-trunk>
    </ingress-trunks>
  </trunks>
</rsvp-te>
```

Command Syntax

```
secondary-priority <1-5> hop-limit <1-255>
```

Configure bandwidth

Use this attribute to reserve the primary/secondary bandwidth in bits per second for the current trunk.

Attribute Name: bandwidth

Attribute Type: string

Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <trunks>
    <ingress-trunks>
      <ingress-trunk>
        <trunk-name>TRUNKNAME</trunk-name>
        <config>
          <trunk-name>TRUNKNAME</trunk-name>
        </config>
        <secondary-priorities>
          <secondary-priority>
            <priority-value>1</priority-value>
```

```
<config>
  <priority-value>1</priority-value>
</config>
  <bandwidth>BANDWIDTH</bandwidth> <!-- operation="delete"-->
</secondary-priority>
</secondary-priorities>
</ingress-trunk>
</ingress-trunks>
</trunks>
</rsvp-te>
```

Command Syntax

```
secondary-priority <1-5> bandwidth BANDWIDTH
```

Configure end label range

Use this attribute to configure the gmpls label set end label

This command is supported when following feature are enabled gmpls feature

Attribute Name: end-label-range

Attribute Type: int32

Attribute Range: 16-1048575

Attribute Name: action-type

Attribute Type: boolean

Attribute Name: start-label-range

Attribute Type: int32

Attribute Range: 16-1048575

Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <trunks>
    <ingress-trunks>
      <ingress-trunk>
        <trunk-name>TRUNKNAME</trunk-name>
        <config>
          <trunk-name>TRUNKNAME</trunk-name>
        </config>
        <gmpls-label-set>
          <config>
            <action-type>true</action-type>
            <start-label-range>16</start-label-range>
            <end-label-range>16</end-label-range>
          </config>
        </gmpls-label-set>
      </ingress-trunk>
    </ingress-trunks>
  </trunks>
```

```
</rsvp-te>
```

Command Syntax

```
gmpls-label-set (packet|) range <16-1048575> <16-1048575>
```

Configure enable node protection

Use this attribute to configure fast-reroute node-protection

Attribute Name: enable-node-protection

Attribute Type: uint8

Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <trunks>
    <ingress-trunks>
      <ingress-trunk>
        <trunk-name>TRUNKNAME</trunk-name>
        <config>
          <trunk-name>TRUNKNAME</trunk-name>
        </config>
        <sessions>
          <fast-reroute>
            <config>
              </enable-node-protection><!-- operation="delete"-->
            </config>
          </fast-reroute>
        </sessions>
      </ingress-trunk>
    </ingress-trunks>
  </trunks>
</rsvp-te>
```

Command Syntax

```
(primary) fast-reroute node-protection
```

Configure protection

Use this attribute to create an Fast Reroute backup and to set an LSP one-to-one protection mechanism. This command can also be used to create an FRR Facility (Bypass) backup and assign a Facility Backup (Bypass Tunnel) available to the protected LSP.

This command is supported when following feature are enabled MPLS-FRR feature

Attribute Name: protection

Attribute Type: enum (one-to-one|facility)

Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <trunks>
    <ingress-trunks>
```

```
<ingress-trunk>
  <trunk-name>TRUNKNAME</trunk-name>
  <config>
    <trunk-name>TRUNKNAME</trunk-name>
  </config>
  <sessions>
  <fast-reroute>
  <config>
    <protection>one-to-one</protection> <!-- operation="delete"-->
  </config>
</fast-reroute>
</sessions>
</ingress-trunk>
</ingress-trunks>
</trunks>
</rsvp-te>
```

Command Syntax

(primary) fast-reroute protection (one-to-one|facility)

Configure frr hold priority

Use this attribute to configure the hold priority value for the selected trunk.

This command is supported when following feature are enabled MPLS-FRR feature

Attribute Name: frr-hold-priority

Attribute Type: uint32

Default Value: 0

Attribute Range: 0-7

Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <trunks>
  <ingress-trunks>
  <ingress-trunk>
    <trunk-name>TRUNKNAME</trunk-name>
    <config>
      <trunk-name>TRUNKNAME</trunk-name>
    </config>
    <sessions>
    <fast-reroute>
    <config>
      <frr-hold-priority>0</frr-hold-priority> <!-- operation="delete"-->
    </config>
  </fast-reroute>
  </sessions>
  </ingress-trunk>
  </ingress-trunks>
  </trunks>
```

```
</rsvp-te>
```

Command Syntax

```
(primary) fast-reroute hold-priority <0-7>
```

Configure frr setup priority

Use this attribute to configure the setup priority value for the selected trunk

This command is supported when following feature are enabled MPLS-FRR feature

Attribute Name: frr-setup-priority

Attribute Type: uint32

Default Value: 7

Attribute Range: 0-7

Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <trunks>
    <ingress-trunks>
      <ingress-trunk>
        <trunk-name>TRUNKNAME</trunk-name>
        <config>
          <trunk-name>TRUNKNAME</trunk-name>
        </config>
        <sessions>
          <fast-reroute>
            <config>
              <frr-setup-priority>0</frr-setup-priority> <!-- operation="delete"-->
            </config>
          </fast-reroute>
        </sessions>
      </ingress-trunk>
    </ingress-trunks>
  </trunks>
</rsvp-te>
```

Command Syntax

```
(primary) fast-reroute setup-priority <0-7>
```

Configure frr hop limit

Use this attribute to specify a limit of hops for an RSVP trunk. Hop-limit data is sent to the CSPF server if CSPF is used.

This command is supported when following feature are enabled MPLS-FRR feature

Attribute Name: frr-hop-limit

Attribute Type: uint32

Default Value: 255

Attribute Range: 1-255

Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <trunks>
    <ingress-trunks>
      <ingress-trunk>
        <trunk-name>TRUNKNAME</trunk-name>
        <config>
          <trunk-name>TRUNKNAME</trunk-name>
        </config>
        <sessions>
          <fast-reroute>
            <config>
              <frr-hop-limit>1</frr-hop-limit> <!-- operation="delete"-->
            </config>
          </fast-reroute>
        </sessions>
      </ingress-trunk>
    </ingress-trunks>
  </trunks>
</rsvp-te>
```

Command Syntax

```
(primary) fast-reroute hop-limit <1-255>
```

Configure fast reroute bandwidth

Use this attribute to reserve the primary/secondary bandwidth in bits per second for the current trunk.

This command is supported when following feature are enabled MPLS-FRR feature

Attribute Name: fast-reroute-bandwidth

Attribute Type: string

Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <trunks>
    <ingress-trunks>
      <ingress-trunk>
        <trunk-name>TRUNKNAME</trunk-name>
        <config>
          <trunk-name>TRUNKNAME</trunk-name>
          </config>
          <sessions>
            <fast-reroute>
              <config>
                <fast-reroute-bandwidth>BANDWIDTH</fast-reroute-bandwidth> <!--
operation="delete"-->
              </config>
            </fast-reroute>
          </sessions>
        </ingress-trunk>
```

```

</ingress-trunks>
</trunks>
</rsvp-te>

```

Command Syntax

(primary) fast-reroute bandwidth BANDWIDTH

Configure admin group name

rsvp admin group name

Attribute Name: admin-group-name

Attribute Type: string

Attribute Name: admin-group-type

Attribute Type: enum (exclude-any|include-any)

Netconf edit-config payload

```

<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
<trunks>
<ingress-trunks>
<ingress-trunk>
  <trunk-name>TRUNKNAME</trunk-name>
  <config>
    <trunk-name>TRUNKNAME</trunk-name>
  </config>
  <sessions>
    <fast-reroute>
    <frr-admin-groups>
    <frr-admin-group>
      <admin-group-name>ADMIN-GROUP-NAME</admin-group-name>
      <config>
        <admin-group-name>ADMIN-GROUP-NAME</admin-group-name>
        <admin-group-type>exclude-any</admin-group-type>
      </config>
    </frr-admin-group>
  </frr-admin-groups>
</fast-reroute>
</sessions>
</ingress-trunk>
</ingress-trunks>
</trunks>
</rsvp-te>

```

Command Syntax

(primary) fast-reroute (exclude-any|include-any) ADMIN-GROUP-NAME

Configure srlg disjoint secondary

Use this attribute to enable secondary srlg disjoint

This command is supported when following feature are enabled Shared Risk Link Group

Attribute Name: srlg-disjoint-secondary

Attribute Type: enum (forced|preferred)

Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <trunks>
    <ingress-trunks>
      <ingress-trunk>
        <trunk-name>TRUNKNAME</trunk-name>
        <config>
          <trunk-name>TRUNKNAME</trunk-name>
        </config>
        <sessions>
          <srlg>
            <config>
              <srlg-disjoint-secondary>forced</srlg-disjoint-secondary> <!--
operation="delete"-->
            </config>
          </srlg>
        </sessions>
      </ingress-trunk>
    </ingress-trunks>
  </trunks>
</rsvp-te>
```

Command Syntax

```
(secondary) srlg-disjoint (forced|preferred)
```

Configure trunk session type

rsvp trunk session type

Attribute Name: trunk-session-type

Attribute Type: enum (secondary|primary)

Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <trunks>
    <ingress-trunks>
      <ingress-trunk>
        <trunk-name>TRUNKNAME</trunk-name>
        <config>
          <trunk-name>TRUNKNAME</trunk-name>
        </config>
        <sessions>
          <session> <!-- operation="delete"-->
            <trunk-session-type>secondary</trunk-session-type>
          </session>
        </sessions>
      </ingress-trunk>
    </ingress-trunks>
  </trunks>
</rsvp-te>
```

```

        <trunk-session-type>secondary</trunk-session-type>
    </config>
</session>
</sessions>
</ingress-trunk>
</ingress-trunks>
</trunks>
</rsvp-te>

```

Command Syntax

(secondary)

Configure disable route record

Use this attribute to enable recording of the route taken by Path and Reservation Request (Resv) messages. These messages confirm the establishment of reservations and also identifies errors. Routes are recorded by means of the Route Record Object (RRO) in the RSVP message.

Attribute Name: disable-route-record

Attribute Type: uint8

Netconf edit-config payload

```

<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
<trunks>
<ingress-trunks>
<ingress-trunk>
    <trunk-name>TRUNKNAME</trunk-name>
    <config>
        <trunk-name>TRUNKNAME</trunk-name>
    </config>
    <sessions>
    <session>
        <trunk-session-type>secondary</trunk-session-type>
        <config>
            <trunk-session-type>secondary</trunk-session-type>
        </config>
        </disable-route-record><!-- operation="delete"-->
    </session>
</sessions>
</ingress-trunk>
</ingress-trunks>
</trunks>
</rsvp-te>

```

Command Syntax

no (secondary|primary) record

Configure disable affinity

Use this attribute to enable sending of session attribute objects with resource affinity data.

Attribute Name: disable-affinity

Attribute Type: uint8

Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <trunks>
    <ingress-trunks>
      <ingress-trunk>
        <trunk-name>TRUNKNAME</trunk-name>
        <config>
          <trunk-name>TRUNKNAME</trunk-name>
        </config>
        <sessions>
          <session>
            <trunk-session-type>secondary</trunk-session-type>
            <config>
              <trunk-session-type>secondary</trunk-session-type>
            </config>
            </disable-affinity><!-- operation="delete"-->
          </session>
        </sessions>
      </ingress-trunk>
    </ingress-trunks>
  </trunks>
</rsvp-te>
```

Command Syntax

```
no (secondary|primary) affinity
```

Configure enable reuse route record

Use this attribute to use the updated Route Record List as an Explicit Route (with all strict nodes) when a path message is sent out at the next refresh.

Attribute Name: enable-reuse-route-record

Attribute Type: uint8

Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <trunks>
    <ingress-trunks>
      <ingress-trunk>
        <trunk-name>TRUNKNAME</trunk-name>
        <config>
          <trunk-name>TRUNKNAME</trunk-name>
        </config>
        <sessions>
          <session>
            <trunk-session-type>secondary</trunk-session-type>
            <config>
```

```

        <trunk-session-type>secondary</trunk-session-type>
    </config>
    </enable-reuse-route-record><!-- operation="delete"-->
</session>
</sessions>
</ingress-trunk>
</ingress-trunks>
</trunks>
</rsvp-te>

```

Command Syntax

```
(secondary|primary) reuse-route-record
```

Configure disable cspf

Use this attribute to enable the use of Constrained Shortest Path First (CSPF) server for an explicit route to the egress, or all RSVP sessions. When CSPF is turned off globally, it cannot be enabled for any LSP.

Attribute Name: disable-cspf

Attribute Type: uint8

Netconf edit-config payload

```

<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
<trunks>
<ingress-trunks>
<ingress-trunk>
    <trunk-name>TRUNKNAME</trunk-name>
    <config>
        <trunk-name>TRUNKNAME</trunk-name>
    </config>
    <sessions>
    <session>
        <trunk-session-type>secondary</trunk-session-type>
        <config>
            <trunk-session-type>secondary</trunk-session-type>
        </config>
        </disable-cspf><!-- operation="delete"-->
    </session>
</sessions>
</ingress-trunk>
</ingress-trunks>
</trunks>
</rsvp-te>

```

Command Syntax

```
no (secondary|primary) cspf
```

Configure enable local protection

Use this attribute to enable the local repair of explicit routes for which this router is a transit node.

Attribute Name: enable-local-protection

Attribute Type: uint8

Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <trunks>
    <ingress-trunks>
      <ingress-trunk>
        <trunk-name>TRUNKNAME</trunk-name>
        <config>
          <trunk-name>TRUNKNAME</trunk-name>
        </config>
        <sessions>
          <session>
            <trunk-session-type>secondary</trunk-session-type>
            <config>
              <trunk-session-type>secondary</trunk-session-type>
            </config>
            </enable-local-protection><!-- operation="delete"-->
          </session>
        </sessions>
      </ingress-trunk>
    </ingress-trunks>
  </trunks>
</rsvp-te>
```

Command Syntax

```
(secondary|primary) local-protection
```

Configure traffic type

Use this attribute to identify the traffic type for this RSVP Trunk/bypss/P2MP LSP's

Attribute Name: traffic-type

Attribute Type: enum (controlled-load|guaranteed)

Default Value: controlled-load

Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <trunks>
    <ingress-trunks>
      <ingress-trunk>
        <trunk-name>TRUNKNAME</trunk-name>
        <config>
          <trunk-name>TRUNKNAME</trunk-name>
        </config>
        <sessions>
          <session>
            <trunk-session-type>secondary</trunk-session-type>
```

```

    <config>
      <trunk-session-type>secondary</trunk-session-type>
    </config>
    <traffic-type>controlled-load</traffic-type> <!-- operation="delete"-->
  </session>
</sessions>
</ingress-trunk>
</ingress-trunks>
</trunks>
</rsvp-te>

```

Command Syntax

```
(secondary|primary) traffic (controlled-load|guaranteed)
```

Configure retry count

Use this attribute to specify a retry count for an RSVP Trunk.

Attribute Name: retry-count

Attribute Type: uint16

Attribute Range: 1-65535

Netconf edit-config payload

```

<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <trunks>
    <ingress-trunks>
      <ingress-trunk>
        <trunk-name>TRUNKNAME</trunk-name>
        <config>
          <trunk-name>TRUNKNAME</trunk-name>
        </config>
        <sessions>
          <session>
            <trunk-session-type>secondary</trunk-session-type>
            <config>
              <trunk-session-type>secondary</trunk-session-type>
            </config>
            <retry-count>1</retry-count> <!-- operation="delete"-->
          </session>
        </sessions>
      </ingress-trunk>
    </ingress-trunks>
  </trunks>
</rsvp-te>

```

Command Syntax

```
(secondary|primary) retry-limit <1-65535>
```

Configure retry interval

Use this attribute to specify a retry interval for an RSVP Trunk. When an ingress node tries to configure an LSP and the setup fails due to the receipt of a Path Error message, the system waits for the time configured with this command, before retrying the LSP setup process

Attribute Name: retry-interval

Attribute Type: uint16

Default Value: 30

Attribute Range: 1-600

Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <trunks>
    <ingress-trunks>
      <ingress-trunk>
        <trunk-name>TRUNKNAME</trunk-name>
        <config>
          <trunk-name>TRUNKNAME</trunk-name>
        </config>
        <sessions>
          <session>
            <trunk-session-type>secondary</trunk-session-type>
            <config>
              <trunk-session-type>secondary</trunk-session-type>
            </config>
            <retry-interval>1</retry-interval> <!-- operation="delete"-->
          </session>
        </sessions>
      </ingress-trunk>
    </ingress-trunks>
  </trunks>
</rsvp-te>
```

Command Syntax

```
(secondary|primary) retry-timer <1-600>
```

Configure cspf retry count

Use this attribute to specify the number of retries that CSPF should carry out for a request received from RSVP.

Attribute Name: cspf-retry-count

Attribute Type: uint16

Attribute Range: 1-65535

Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <trunks>
    <ingress-trunks>
```

```

<ingress-trunk>
  <trunk-name>TRUNKNAME</trunk-name>
  <config>
    <trunk-name>TRUNKNAME</trunk-name>
  </config>
  <sessions>
    <session>
      <trunk-session-type>secondary</trunk-session-type>
      <config>
        <trunk-session-type>secondary</trunk-session-type>
      </config>
      <cspf-retry-count>1</cspf-retry-count> <!-- operation="delete"-->
    </session>
  </sessions>
</ingress-trunk>
</ingress-trunks>
</trunks>
</rsvp-te>

```

Command Syntax

```
(secondary|primary) cspf-retry-limit <1-65535>
```

Configure cspf retry interval

Use this attribute to specify the time between each retry that CSPF might carry out for a request received from RSVP.

Attribute Name: cspf-retry-interval

Attribute Type: uint16

Default Value: 30

Attribute Range: 1-600

Netconf edit-config payload

```

<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <trunks>
    <ingress-trunks>
      <ingress-trunk>
        <trunk-name>TRUNKNAME</trunk-name>
        <config>
          <trunk-name>TRUNKNAME</trunk-name>
        </config>
        <sessions>
          <session>
            <trunk-session-type>secondary</trunk-session-type>
            <config>
              <trunk-session-type>secondary</trunk-session-type>
            </config>
            <cspf-retry-interval>1</cspf-retry-interval> <!-- operation="delete"-->
          </session>
        </sessions>
      </ingress-trunk>
    </ingress-trunks>
  </trunks>
</rsvp-te>

```

```
</ingress-trunk>
</ingress-trunks>
</trunks>
</rsvp-te>
```

Command Syntax

```
(secondary|primary) cspf-retry-timer <1-600>
```

Configure name

rsvp admin group name

Attribute Name: name

Attribute Type: string

Attribute Name: type

Attribute Type: enum (exclude-any|include-any|include-all)

Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <trunks>
    <ingress-trunks>
      <ingress-trunk>
        <trunk-name>TRUNKNAME</trunk-name>
        <config>
          <trunk-name>TRUNKNAME</trunk-name>
        </config>
        <sessions>
          <session>
            <trunk-session-type>secondary</trunk-session-type>
            <config>
              <trunk-session-type>secondary</trunk-session-type>
            </config>
            <admin-groups>
              <admin-group>
                <name>ADMIN-GROUP-NAME</name>
                <config>
                  <name>ADMIN-GROUP-NAME</name>
                  <type>exclude-any</type>
                </config>
              </admin-group>
            </admin-groups>
          </session>
        </sessions>
      </ingress-trunk>
    </ingress-trunks>
  </trunks>
</rsvp-te>
```

Command Syntax

```
(secondary|primary) (exclude-any|include-any|include-all) ADMIN-GROUP-NAME
```

Configure path name

Use this attribute to configure the path

Attribute Name: path-name

Attribute Type: string

Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <trunks>
    <ingress-trunks>
      <ingress-trunk>
        <trunk-name>TRUNKNAME</trunk-name>
        <config>
          <trunk-name>TRUNKNAME</trunk-name>
        </config>
        <sessions>
          <session>
            <trunk-session-type>secondary</trunk-session-type>
            <config>
              <trunk-session-type>secondary</trunk-session-type>
            </config>
            <path-state-block>
              <config>
                <path-name>PATHNAME</path-name> <!-- operation="delete"-->
              </config>
            </path-state-block>
          </session>
        </sessions>
      </ingress-trunk>
    </ingress-trunks>
  </trunks>
</rsvp-te>
```

Command Syntax

```
(secondary|primary) path PATHNAME
```

Configure bandwidth

Use this attribute to reserve the primary/secondary bandwidth in bits per second for the current trunk.

Attribute Name: bandwidth

Attribute Type: string

Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <trunks>
```

```
<ingress-trunks>
<ingress-trunk>
  <trunk-name>TRUNKNAME</trunk-name>
  <config>
    <trunk-name>TRUNKNAME</trunk-name>
  </config>
  <sessions>
  <session>
    <trunk-session-type>secondary</trunk-session-type>
    <config>
      <trunk-session-type>secondary</trunk-session-type>
    </config>
    <path-state-block>
    <config>
      <bandwidth>BANDWIDTH</bandwidth> <!-- operation="delete"-->
    </config>
    </path-state-block>
  </session>
</sessions>
</ingress-trunk>
</ingress-trunks>
</trunks>
</rsvp-te>
```

Command Syntax

(secondary|primary) bandwidth BANDWIDTH

Configure enable label record

Use this attribute to record all labels exchanged between RSVP-enabled routers during the reservation setup process

Attribute Name: enable-label-record

Attribute Type: uint8

Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
<trunks>
<ingress-trunks>
<ingress-trunk>
  <trunk-name>TRUNKNAME</trunk-name>
  <config>
    <trunk-name>TRUNKNAME</trunk-name>
  </config>
  <sessions>
  <session>
    <trunk-session-type>secondary</trunk-session-type>
    <config>
      <trunk-session-type>secondary</trunk-session-type>
    </config>
    <path-state-block>
```

```

    <session-attributes>
    <config>
        </enable-label-record><!-- operation="delete"-->
    </config>
</session-attributes>
</path-state-block>
</session>
</sessions>
</ingress-trunk>
</ingress-trunks>
</trunks>
</rsvp-te>

```

Command Syntax

(secondary|primary) label-record

Configure hold priority

Use this attribute to configure the hold priority value for the selected trunk.

Attribute Name: hold-priority

Attribute Type: uint8

Default Value: 0

Attribute Range: 0-7

Netconf edit-config payload

```

<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
<trunks>
<ingress-trunks>
<ingress-trunk>
    <trunk-name>TRUNKNAME</trunk-name>
    <config>
        <trunk-name>TRUNKNAME</trunk-name>
    </config>
</sessions>
<session>
    <trunk-session-type>secondary</trunk-session-type>
    <config>
        <trunk-session-type>secondary</trunk-session-type>
    </config>
    <path-state-block>
    <session-attributes>
    <config>
        <hold-priority>0</hold-priority> <!-- operation="delete"-->
    </config>
    </session-attributes>
</path-state-block>
</session>
</sessions>

```

```
</ingress-trunk>
</ingress-trunks>
</trunks>
</rsvp-te>
```

Command Syntax

```
(secondary|primary) hold-priority <0-7>
```

Configure setup priority

Use this attribute to configure the setup priority value for the selected trunk

Attribute Name: setup-priority

Attribute Type: uint8

Default Value: 7

Attribute Range: 0-7

Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <trunks>
    <ingress-trunks>
      <ingress-trunk>
        <trunk-name>TRUNKNAME</trunk-name>
        <config>
          <trunk-name>TRUNKNAME</trunk-name>
        </config>
        <sessions>
          <session>
            <trunk-session-type>secondary</trunk-session-type>
            <config>
              <trunk-session-type>secondary</trunk-session-type>
            </config>
            <path-state-block>
              <session-attributes>
                <config>
                  <setup-priority>0</setup-priority> <!-- operation="delete"-->
                </config>
              </session-attributes>
            </path-state-block>
          </session>
        </sessions>
      </ingress-trunk>
    </ingress-trunks>
  </trunks>
</rsvp-te>
```

Command Syntax

```
(secondary|primary) setup-priority <0-7>
```

Configure hop limit

Use this attribute to specify a limit of hops for an RSVP trunk. Hop-limit data is sent to the CSPF server if CSPF is used.

Attribute Name: hop-limit

Attribute Type: uint16

Default Value: 255

Attribute Range: 1-255

Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <trunks>
    <ingress-trunks>
      <ingress-trunk>
        <trunk-name>TRUNKNAME</trunk-name>
        <config>
          <trunk-name>TRUNKNAME</trunk-name>
        </config>
        <sessions>
          <session>
            <trunk-session-type>secondary</trunk-session-type>
            <config>
              <trunk-session-type>secondary</trunk-session-type>
            </config>
            <path-state-block>
              <session-attributes>
                <config>
                  <hop-limit>1</hop-limit> <!-- operation="delete"-->
                </config>
              </session-attributes>
            </path-state-block>
          </session>
        </sessions>
      </ingress-trunk>
    </ingress-trunks>
  </trunks>
</rsvp-te>
```

Command Syntax

```
(secondary|primary) hop-limit <1-255>
```

Configure filter type

Use this attribute to set the filter to fixed or shared filter style for RSVP trunk.

Attribute Name: filter-type

Attribute Type: enum (fixed|shared-explicit)

Default Value: shared-explicit

Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <trunks>
    <ingress-trunks>
      <ingress-trunk>
        <trunk-name>TRUNKNAME</trunk-name>
        <config>
          <trunk-name>TRUNKNAME</trunk-name>
        </config>
        <sessions>
          <session>
            <trunk-session-type>secondary</trunk-session-type>
            <config>
              <trunk-session-type>secondary</trunk-session-type>
            </config>
            <path-state-block>
              <session-attributes>
                <config>
                  <filter-type>shared-explicit</filter-type> <!-- operation="delete"-->
                </config>
              </session-attributes>
            </path-state-block>
          </session>
        </sessions>
      </ingress-trunk>
    </ingress-trunks>
  </trunks>
</rsvp-te>
```

Command Syntax

(secondary|primary) filter (fixed)

Configure bandwidth

Use this attribute to reserve the primary/secondary bandwidth in bits per second for the current trunk.

Attribute Name: bandwidth

Attribute Type: string

Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <trunks>
    <ingress-trunks>
      <ingress-trunk>
        <trunk-name>TRUNKNAME</trunk-name>
        <config>
          <trunk-name>TRUNKNAME</trunk-name>
        </config>
        <sessions>
          <session>
```

```

    <trunk-session-type>secondary</trunk-session-type>
  <config>
    <trunk-session-type>secondary</trunk-session-type>
  </config>
  <path-state-block>
    <session-attributes>
      <config>
        <bandwidth>BANDWIDTH</bandwidth> <!-- operation="delete"-->
      </config>
    </session-attributes>
  </path-state-block>
</session>
</sessions>
</ingress-trunk>
</ingress-trunks>
</trunks>
</rsvp-te>

```

Command Syntax

```
(secondary|primary) bandwidth BANDWIDTH
```

Configure link protection

Use this attribute to configure the gmpls link-protection for the RSVP Trunk

Attribute Name: link-protection

Attribute Type: enum (extra-traffic|unprotected|shared|dedicated-one-to-one|dedicated-one-plus-one|enhanced)

Default Value: unprotected

Netconf edit-config payload

```

<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <trunks>
    <ingress-trunks>
      <ingress-trunk>
        <trunk-name>TRUNKNAME</trunk-name>
        <config>
          <trunk-name>TRUNKNAME</trunk-name>
        </config>
      </sessions>
      <session>
        <trunk-session-type>secondary</trunk-session-type>
        <config>
          <trunk-session-type>secondary</trunk-session-type>
        </config>
        <gmpls-attributes>
          <config>
            <link-protection>unprotected</link-protection> <!--
operation="delete"-->
          </config>
        </gmpls-attributes>
      </session>
    </ingress-trunks>
  </trunks>
</rsvp-te>

```

```
</session>
</sessions>
</ingress-trunk>
</ingress-trunks>
</trunks>
</rsvp-te>
```

Command Syntax

(secondary|primary) protection (extra-traffic|unprotected|shared|dedicated-one-to-one|dedicated-one-plus-one|enhanced)

Configure forward label value

Use this attribute to configure the explicit label supported for an LSP.

Attribute Name: forward-label-value

Attribute Type: uint32

Attribute Range: 16-1048575

Attribute Name: forward-direction

Attribute Type: enum (forward|packet forward)

Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <trunks>
    <ingress-trunks>
      <ingress-trunk>
        <trunk-name>TRUNKNAME</trunk-name>
        <config>
          <trunk-name>TRUNKNAME</trunk-name>
        </config>
      </ingress-trunk>
    </ingress-trunks>
  </trunks>
  <sessions>
    <session>
      <trunk-session-type>secondary</trunk-session-type>
      <config>
        <trunk-session-type>secondary</trunk-session-type>
      </config>
      <gmpls-attributes>
        <explicit-forward>
          <forward-label-value>16</forward-label-value>
          <config>
            <forward-label-value>16</forward-label-value>
            <forward-direction>forward</forward-direction>
          </config>
        </explicit-forward>
      </gmpls-attributes>
    </session>
  </sessions>
</rsvp-te>
```

```
</trunks>
</rsvp-te>
```

Command Syntax

```
(secondary|primary) explicit-label <16-1048575> (forward|packet forward)
```

Configure reverse label value

Use this attribute to configure the explicit label supported for an LSP.

Attribute Name: reverse-label-value

Attribute Type: uint32

Attribute Range: 16-1048575

Attribute Name: reverse-direction

Attribute Type: enum (reverse|packet reverse)

Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
<trunks>
<ingress-trunks>
<ingress-trunk>
  <trunk-name>TRUNKNAME</trunk-name>
  <config>
    <trunk-name>TRUNKNAME</trunk-name>
  </config>
  <sessions>
  <session>

    <config>
      <trunk-session-type>secondary</trunk-session-type>
    </config>
    <gmpls-attributes>
    <explicit-reverse>
      <reverse-label-value>16</reverse-label-value>
      <config>
        <reverse-label-value>16</reverse-label-value>
        <reverse-direction>reverse</reverse-direction>
      </config>
    </explicit-reverse>
    </gmpls-attributes>
  </session>
</sessions>
</ingress-trunk>
</ingress-trunks>
</trunks>
</rsvp-te>
```

Command Syntax

```
(secondary|primary) explicit-label <16-1048575> (reverse|packet reverse)
```

Configure llsp class

to configure a Differentiated Services Label-Only-Inferred-PSC (Diff-Serv L-LSP) that uses Diff-Serv Class as its PHB Scheduling Class (PSC).

This command is supported when following feature are enabled diffserv feature

Attribute Name: llsp-class

Attribute Type: string

Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <trunks>
    <ingress-trunks>
      <ingress-trunk>
        <trunk-name>TRUNKNAME</trunk-name>
        <config>
          <trunk-name>TRUNKNAME</trunk-name>
        </config>
      </ingress-trunk>
    </ingress-trunks>
  </trunks>
  <sessions>
    <session>
      <trunk-session-type>secondary</trunk-session-type>
      <config>
        <trunk-session-type>secondary</trunk-session-type>
      </config>
      <diff-serv-info>
        <config>
          <llsp-class>CLASS</llsp-class> <!-- operation="delete"-->
        </config>
      </diff-serv-info>
    </session>
  </sessions>
</rsvp-te>
```

Command Syntax

```
(secondary|primary) llsp CLASS
```

Configure dscp exp map exp val

rsvp trunk dsinfo exp val

Attribute Name: dscp-exp-map-exp-val

Attribute Type: int32

Attribute Range: 0-7

Attribute Name: dscp-exp-map-class-name

Attribute Type: string

Netconf edit-config payload

```

<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <trunks>
    <ingress-trunks>
      <ingress-trunk>
        <trunk-name>TRUNKNAME</trunk-name>
        <config>
          <trunk-name>TRUNKNAME</trunk-name>
        </config>
        <sessions>
          <session>

        </sessions>
      </ingress-trunk>
    </ingress-trunks>
  </trunks>
</rsvp-te>

```

Command Syntax

```
(secondary|primary) class-to-exp-bit CLASS <0-7>
```

Configure elsp signal

Use this attribute to configure a primary Diff-Serv (Differentiated Services) explicitly signaled E-LSP (EXP-InferredPSC LSP) interface.

This command is supported when following feature are enabled diffserv feature

Attribute Name: elsp-signal

Attribute Type: empty

Netconf edit-config payload

```

<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <trunks>
    <ingress-trunks>
      <ingress-trunk>

```

```

<trunk-name>TRUNKNAME</trunk-name>
<config>
  <trunk-name>TRUNKNAME</trunk-name>
</config>

<session>
  <trunk-session-type>secondary</trunk-session-type>
  <config>
    <trunk-session-type>secondary</trunk-session-type>
  </config>
  <diff-serv-info>
    <elbsp-class>
      <config>
        </elbsp-signal>
      </config>
    </elbsp-class>
  </diff-serv-info>
</session>
</sessions>
</ingress-trunk>
</ingress-trunks>
</trunks>
</rsvp-te>

```

Command Syntax

```
(secondary|primary) elsp-sigaled
```

Configure elsp signal class1

Use this attribute to configure a primary Diff-Serv (Differentiated Services) explicitly signaled E-LSP (EXP-InferredPSC LSP) interface class1

This command is supported when following feature are enabled diffserv feature

Attribute Name: elsp-signal-class1

Attribute Type: string

Attribute Name: elsp-signal

Attribute Type: empty

Netconf edit-config payload

```

<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
<trunks>

</ipi-rsvp-trunk_rsvp-session-reset>
```

Command Syntax

```
clear rsvp session TUNNEL-ID LSP-ID INGRESS EGRESS
```

IPI-RSVP-INTERFACE

Configure enable rsvp

Use this attribute to enable control adjacency to send and receive RSVP-TE control messages for MPLS and GMPLS

Attribute Name: enable-rsvp

Attribute Type: uint8

Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      </enable-rsvp><!-- operation="delete"-->
    </interface>
  </interfaces>
</rsvp-te>
```

Command Syntax

```
enable-rsvp
```

Configure enable iana hello config

Enable the exchange of non IANA specific Hello messages

Attribute Name: enable-iana-hello-config

Attribute Type: uint8

Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      </enable-iana-hello-config><!-- operation="delete"-->
    </interface>
  </interfaces>
</rsvp-te>
```

Command Syntax

```
rsvp non-IANA-hello
```

Configure disable refresh reduction

Use this attribute to enable refresh reduction capability advertisement for all interfaces

Attribute Name: disable-refresh-reduction

Attribute Type: uint8

Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      <refresh-reduction>
        <config>
          </disable-refresh-reduction><!-- operation="delete"-->
        </config>
      </refresh-reduction>
    </interface>
  </interfaces>
</rsvp-te>
```

Command Syntax

```
no rsvp refresh-reduction
```

Configure enable message ack

Use this attribute to enable message acknowledgement for all messages being sent to neighbors that are known to support refresh reduction.

Attribute Name: enable-message-ack

Attribute Type: uint8

Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      <refresh-reduction>
        <config>
          </enable-message-ack><!-- operation="delete"-->
        </config>
      </refresh-reduction>
    </interface>
  </interfaces>
```

```
</rsvp-te>
```

Command Syntax

```
rsvp message-ack
```

Configure ack wait timeout

Use this attribute to configure the acknowledgement wait timeout for all RSVP-TE neighbors

Attribute Name: ack-wait-timeout

Attribute Type: uint32

Default Value: 10

Attribute Range: 1-65535

Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      <refresh-reduction>
        <config>
          <ack-wait-timeout>1</ack-wait-timeout> <!-- operation="delete"-->
        </config>
      </refresh-reduction>
    </interface>
  </interfaces>
</rsvp-te>
```

Command Syntax

```
rsvp ack-wait-timeout <1-65535>
```

Configure refresh time

Use this attribute to configure RSVP refresh interval timer. The timer specifies the interval after which Path and/ or Reservation Request (Resv) messages will be sent out. The refresh time and keep multiplier are two interrelated timing parameters used to calculate the valid Reservation Lifetime for an LSP. Refresh time regulates the interval between Refresh messages which include Path and Reservation Request (Resv) messages. Refresh messages are sent periodically so that reservation does not timeout in the neighboring nodes. Each sender and receiver host sends Path and Resv messages, downstream and upstream respectively, along the paths.

Attribute Name: refresh-time

Attribute Type: uint16

Default Value: 30

Attribute Range: 1-65535

Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
<interfaces>
<interface>
  <name>WORD</name>
  <config>
    <name>WORD</name>
  </config>
  <refresh-reduction>
  <config>
    <refresh-time>1</refresh-time> <!-- operation="delete"-->
  </config>
</refresh-reduction>
</interface>
</interfaces>
</rsvp-te>
```

Command Syntax

```
rsvp refresh-time <1-65535>
```

Configure keep multiplier

Use this attribute to configure the constant to be used to calculate a valid reservation lifetime for a Labeled Switched Path (LSP). The refresh time and keep multiplier are two interrelated timing parameters used to calculate the valid reservation lifetime for an LSP. The router sends refresh messages periodically so that the neighbors do not timeout

Attribute Name: keep-multiplier

Attribute Type: int32

Default Value: 3

Attribute Range: 1-255

Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
<interfaces>
<interface>
  <name>WORD</name>
  <config>
    <name>WORD</name>
  </config>
  <refresh-reduction>
  <config>
    <keep-multiplier>1</keep-multiplier> <!-- operation="delete"-->
  </config>
</refresh-reduction>
</interface>
</interfaces>
</rsvp-te>
```

Command Syntax

```
rsvp keep-multiplier <1-255>
```

Configure enable hello receipt

Use this attribute to enable the receipt of Hello messages from peers.

Attribute Name: enable-hello-receipt

Attribute Type: uint8

Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      <hellos>
        <config>
          </enable-hello-receipt><!-- operation="delete"-->
        </config>
      </hellos>
    </interface>
  </interfaces>
</rsvp-te>
```

Command Syntax

```
rsvp hello-receipt
```

Configure hello interval

Use this attribute to set an interval between Hello packets.Used as a global command, this value is over-ridden by the hello-interval set on the interface (see rsvp hello-interval).For optimum performance, set this value no more than one-third of the hello-timeout value.

Attribute Name: hello-interval

Attribute Type: int32

Default Value: 2

Attribute Range: 1-65535

Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
    </interface>
  </interfaces>
</rsvp-te>
```

```

    <hellos>
    <config>
        <hello-interval>1</hello-interval> <!-- operation="delete"-->
    </config>
</hellos>
</interface>
</interfaces>
</rsvp-te>

```

Command Syntax

```
rsvp hello-interval <1-65535>
```

Configure hello timeout

Timeout for clearing up all sessions shared with a neighbor. If an LSR has not received a Hello message from a peer within the number of seconds set with this command, all sessions shared with this peer are reset. The hello-timeout determines how long an RSVP node waits for a hello message before declaring a neighbor to be down.

Attribute Name: hello-timeout

Attribute Type: int32

Default Value: 7

Attribute Range: 1-65535

Netconf edit-config payload

```

<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
<interfaces>
<interface>
    <name>WORD</name>
    <config>
        <name>WORD</name>
    </config>
    <hellos>
    <config>
        <hello-timeout>1</hello-timeout> <!-- operation="delete"-->
    </config>
</hellos>
</interface>
</interfaces>
</rsvp-te>

```

Command Syntax

```
rsvp hello-timeout <1-65535>
```

IPI-MPLS

Configure name

Specify service template name

Attribute Name: name

Attribute Type: string

Attribute Range: 1-32

Netconf edit-config payload

```
<mpls xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mpls">
  <l2vpn>
    <customer-service-templates>
      <customer-service-template> <!-- operation="delete"-->
        <name>NAME</name>
        <config>
          <name>WORD</name>
        </config>
      </customer-service-template>
    </customer-service-templates>
  </l2vpn>
</mpls>
```

Command Syntax

```
service-template NAME
```

Configure match all

Use this attribute to specify match criteria as match all

Attribute Name: match-all

Attribute Type: empty

Netconf edit-config payload

```
<mpls xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mpls">
  <l2vpn>
    <customer-service-templates>
      <customer-service-template>
        <name>NAME</name>
        <config>
          <name>WORD</name>
        </config>
        </match-all><!-- operation="delete"-->
      </customer-service-template>
    </customer-service-templates>
  </l2vpn>
</mpls>
```

Command Syntax

```
match all
```

Configure match single tag outer vlan range

Use this attribute to set match type with outer vlan value

Attribute Name: match-single-tag-outer-vlan-range

Attribute Type: string

Attribute Range: 1-4094

Netconf edit-config payload

```
<mpls xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mpls">
  <l2vpn>
    <customer-service-templates>
      <customer-service-template>
        <name>NAME</name>
        <config>
          <name>WORD</name>
        </config>
        <match-single-tag-outer-vlan-range>VLAN_RANGE2</match-single-tag-outer-vlan-
range> <!-- operation="delete"-->
      </customer-service-template>
    </customer-service-templates>
  </l2vpn>
</mpls>
```

Command Syntax

```
match outer-vlan VLAN_RANGE2
```

Configure match untagged

Use this attribute to specify match criteria as match untagged

Attribute Name: match-untagged

Attribute Type: empty

Netconf edit-config payload

```
<mpls xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mpls">
  <l2vpn>
    <customer-service-templates>
      <customer-service-template>
        <name>NAME</name>

          <name>WORD</name>
        </config>
        <match-untagged><!-- operation="delete"-->
      </customer-service-template>
    </customer-service-templates>
  </l2vpn>
</mpls>
```

```
</l2vpn>
</mpls>
```

Command Syntax

```
match untagged
```

Configure match inner vlan id

Specify inner vlan VID or range(VLAN ID 1-4094 or range: 2-5) for match double tag

Attribute Name: match-inner-vlan-id

Attribute Type: string

Netconf edit-config payload

```
<mpls xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mpls">
  <l2vpn>
    <customer-service-templates>
      <customer-service-template>
        <name>NAME</name>
        <config>
          <name>WORD</name>
        </config>
      <double-tags>
        <double-tag>
          <match-outer-vlan-id>1</match-outer-vlan-id>
          <config>
            <match-outer-vlan-id>1</match-outer-vlan-id>
            <match-inner-vlan-id>VLAN_RANGE2</match-inner-vlan-id> <!--
operation="delete"-->
          </double-tag>
        </double-tags>
      </customer-service-template>
    </customer-service-templates>
  </l2vpn>
</mpls>
```

Command Syntax

```
match double-tag outer-vlan <1-4094> inner-vlan VLAN_RANGE2
```

Configure vlan action type

Specify rewrite ingress action type

Attribute Name: vlan-action-type

Attribute Type: enum (pop|push|translate)

Attribute Name: tag-protocol-identifier

Attribute Type: enum (dot1.q|dot1.ad|0x9100)

Netconf edit-config payload

```

<mpls xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mpls">
<l2vpn>
<customer-service-templates>
<customer-service-template>
  <name>NAME</name>
  <config>
    <name>WORD</name>
  </config>
</customer-service-template>
</customer-service-templates>
</l2vpn>
</mpls>

```

Command Syntax

```
rewrite ingress (pop) (outgoing-tpid (dot1.q|dot1.ad|0x9100) |)
```

Configure vlan action type

Specify rewrite ingress action type

Attribute Name: vlan-action-type

Attribute Type: enum (pop|push|translate)

Attribute Name: outer-vlan-identifier

Attribute Type: uint16

Attribute Range: 1-4094

Attribute Name: tag-protocol-identifier

Attribute Type: enum (dot1.q|dot1.ad|0x9100)

Netconf edit-config payload

```

<mpls xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mpls">

        </config>
      <action-types>
        <action-type>
          <vlan-action-type>pop</vlan-action-type>
          <config>
            <vlan-action-type>pop</vlan-action-type>
            <outer-vlan-identifier>1</outer-vlan-identifier>
          </config>
        </action-type>
      </action-types>
    </customer-service-template>
  </customer-service-templates>
</l2vpn>
</mpls>
```

Command Syntax

```
rewrite ingress (push) <1-4094>
```

Configure group name

Use this attribute to create a new access circuit group for MPLS

This command is supported when following feature are enabled MPLS-VC feature

Attribute Name: group-name

Attribute Type: string

Attribute Range: 1-32

Attribute Name: group-identifier

Attribute Type: uint32

Attribute Range: 1-4294967295

Netconf edit-config payload

```
<mpls xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mpls">
  <l2vpn>
    <access-circuit-groups>
      <access-circuit-group> <!-- operation="delete"-->
        <group-name>NAME</group-name>
        <config>
          <group-name>WORD</group-name>
          <group-identifier>1</group-identifier>
        </config>
      </access-circuit-group>
    </access-circuit-groups>
  </l2vpn>
</mpls>
```

Command Syntax

```
mpls ac-group NAME <1-4294967295>
```

Configure local packet handling

Use this attribute to enable the labeling of locally generated TCP packets. All other locally generated packets are not looked at by the MPLS Forwarder

Attribute Name: local-packet-handling

Attribute Type: empty

Netconf edit-config payload

```
<mpls xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mpls">
  <global>
    <config>
      </local-packet-handling><!-- operation="delete"-->
    </config>
  </global>
</mpls>
```

```
</mpls>
```

Command Syntax

```
mpls local-packet-handling
```

Configure lsp stitching

Use this attribute to enable lsp stitching for ILM and installed FTM

Attribute Name: lsp-stitching

Attribute Type: empty

Netconf edit-config payload

```
<mpls xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mpls">
  <global>
    <config>
      </lsp-stitching><!-- operation="delete"-->
    </config>
  </global>
</mpls>
```

Command Syntax

```
mpls lsp-stitching
```

Configure propagate ttl

Use this attribute to enable TTL propagation. Enabling TTL propagation causes the TTL value in the IP header to be copied onto the TTL field in the shim header, at the LSP ingress

Attribute Name: propagate-ttl

Attribute Type: empty

Netconf edit-config payload

```
<mpls xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mpls">
  <global>
    <config>
      </propagate-ttl><!-- operation="delete"-->
    </config>
  </global>
</mpls>
```

Command Syntax

```
mpls propagate-ttl
```

Configure ingress ttl value

Use this attribute to set a Time to Live (TTL) value for LSPs for which this LSR is the ingress.

Attribute Name: ingress-ttl-value

Attribute Type: uint8

Attribute Range: 0-255

Netconf edit-config payload

```
<mpls xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mpls">
  <global>
    <config>
      <ingress-ttl-value>0</ingress-ttl-value> <!-- operation="delete"-->
    </config>
  </global>
</mpls>
```

Command Syntax

```
mpls ingress-ttl <0-255>
```

Configure lsp model uniform

Use this attribute to configure the MPLS LSP model as Uniform.

Attribute Name: lsp-model-uniform

Attribute Type: empty

Netconf edit-config payload

```
<mpls xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mpls">
  <global>
    <config>
      </lsp-model-uniform><!-- operation="delete"-->
    </config>
  </global>
</mpls>
```

Command Syntax

```
mpls lsp-model uniform
```

Configure enable

Use this attribute to enable label-switching on a TE link

Attribute Name: enable

Attribute Type: empty

Attribute Name: label-space

Attribute Type: uint16

Attribute Range: 0-60000

Netconf edit-config payload

```
<mpls xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mpls">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
```

```

        <name>WORD</name>
    </config>
<label-switching>
<config>
    <label-space>0</label-space>
    </enable>
</config>
</label-switching>
</interface>
</interfaces>
</mpls>

```

Command Syntax

```
label-switching (<0-60000>|)
```

Configure admin group name

Use this attribute to create an administrative group to be used for links. Each link can be a member of one or more, or no administrative groups. This attribute adds link between an interface and a group. The name is the name of the group previously configured. There can be multiple groups per interface.

Attribute Name: admin-group-name

Attribute Type: string

Netconf edit-config payload

```

<mpls xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mpls">
<interfaces>
<interface>
    <name>WORD</name>
    <config>
        <name>WORD</name>
    </config>
<mpls-interface-bandwidth>
<config>
    <admin-group-name>NAME</admin-group-name> <!-- operation="delete"-->
</config>
</mpls-interface-bandwidth>
</interface>
</interfaces>
</mpls>

```

Command Syntax

```
admin-group NAME
```

Configure bandwidth

Use this attribute to specify a discrete, maximum bandwidth value for the interface. The bandwidth attribute takes input ranges from 1 to 999 kbps, 1 to 999 mbps and 1 to 100 gbps.

Attribute Name: bandwidth

Attribute Type: string

Netconf edit-config payload

```
<mpls xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mpls">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
    <mpls-interface-bandwidth>
      <config>
        <bandwidth>BANDWIDTH</bandwidth> <!-- operation="delete"-->
      </config>
    </mpls-interface-bandwidth>
  </interface>
</interfaces>
</mpls>
```

Command Syntax

```
bandwidth BANDWIDTH
```

Configure reservable bandwidth

Use this attribute to specify the maximum reservable bandwidth per interface. This value can be equal or smaller value than max-bandwidth. Attribute takes input from 1 to 999 kbps, 1 to 999 mbps and 1 to 100 gbps

Attribute Name: reservable-bandwidth

Attribute Type: string

Netconf edit-config payload

```
<mpls xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mpls">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
    <mpls-interface-bandwidth>
      <config>
        <reservable-bandwidth>BANDWIDTH</reservable-bandwidth> <!--
operation="delete"-->
      </config>
    </mpls-interface-bandwidth>
  </interface>
</interfaces>
</mpls>
```

Command Syntax

```
reservable-bandwidth BANDWIDTH
```

Configure shared risk link group

Use this attribute to add the link to a srlg group

Attribute Name: shared-risk-link-group

Attribute Type: uint32

Attribute Range: 0-4294967295

Netconf edit-config payload

```
<mpls xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mpls">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
    <mpls-interface-bandwidth>
      <config>
        <shared-risk-link-group>0</shared-risk-link-group> <!-- operation="delete"-->
      </config>
    </mpls-interface-bandwidth>
  </interface>
</interfaces>
</mpls>
```

Command Syntax

```
mpls traffic-eng srlg <0-4294967295>
```

Configure uni available bandwidth

Use this attribute to specify a unidirectional, available bandwidth value for the interface. The bandwidth attribute takes input in 0-999 kbps, 0-999 mbps and 0-100 gbps.

Attribute Name: uni-available-bandwidth

Attribute Type: string

Netconf edit-config payload

```
<mpls xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mpls">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
    <mpls-interface-bandwidth>
      <config>
        <uni-available-bandwidth>BANDWIDTH</uni-available-bandwidth> <!--
operation="delete"-->
      </config>
    </mpls-interface-bandwidth>
  </interface>
</interfaces>
</mpls>
```

```

</interface>
</interfaces>
</mpls>

```

Command Syntax

```
bandwidth-measurement static uni-available-bandwidth BANDWIDTH
```

Configure uni residual bandwidth

Use this attribute to specify a unidirectional, residual bandwidth value for the interface. The bandwidth attribute takes input in 0-999 kbps, 0-999 mbps and 0-100 gbps.

Attribute Name: uni-residual-bandwidth

Attribute Type: string

Netconf edit-config payload

```

<mpls xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mpls">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      <mpls-interface-bandwidth>
        <config>
          <uni-residual-bandwidth>BANDWIDTH</uni-residual-bandwidth> <!--
operation="delete"-->
        </config>
      </mpls-interface-bandwidth>
    </interface>
  </interfaces>
</mpls>

```

Command Syntax

```
bandwidth-measurement static uni-residual-bandwidth BANDWIDTH
```

Configure uni utilized bandwidth

Use this attribute to specify a unidirectional, utilised bandwidth value for the interface. The bandwidth attribute takes input in 0 to 999 kbps, 0 to 999 mbps and 1 to 100gbps.

Attribute Name: uni-utilized-bandwidth

Attribute Type: string

Netconf edit-config payload

```

<mpls xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mpls">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>

```

```
        <name>WORD</name>
    </config>
    <mpls-interface-bandwidth>
    <config>
        <uni-utilized-bandwidth>BANDWIDTH</uni-utilized-bandwidth> <!--
operation="delete"-->
    </config>
    </mpls-interface-bandwidth>
    </interface>
    </interfaces>
    </mpls>
```

Command Syntax

```
bandwidth-measurement static uni-utilized-bandwidth BANDWIDTH
```

Configure max label

Use this attribute to configure a maximum label value for a label space. After setting a maximum label value for a label space, make sure to bind the label space to an interface

Attribute Name: max-label

Attribute Type: uint32

Attribute Range: 16-1048575

Attribute Name: min-label

Attribute Type: uint32

Attribute Range: 16-1048575

Netconf edit-config payload

```
<mpls xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mpls">
  <label-spaces>
    <label-space>
      <label-space-name>0</label-space-name>
      <config>
        <label-space-name>0</label-space-name>
      </config>
    </label-space>
  </label-spaces>
  <global-label-range>
    <config>
      <min-label>16</min-label>
      <max-label>16</max-label>
    </config>
  </global-label-range>
</mpls>
```

Command Syntax

```
mpls min-label-value <16-1048575> max-label-value <16-1048575> (label-space <0-60000>|)
```

Configure label space name

This attribute identifies the label space

Attribute Name: label-space-name

Attribute Type: uint16

Attribute Range: 0-60000

Attribute Name: module-name

Attribute Type: enum (rsvp|ldp|ldp-vc|bgp)

Attribute Name: min-label

Attribute Type: uint32

Attribute Range: 16-1048575

Attribute Name: max-label

Attribute Type: uint32

Attribute Range: 16-1048575

Netconf edit-config payload

```
<mpls xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mpls">
<label-spaces>
<label-space> <!-- operation="delete"-->
  <label-space-name>0</label-space-name>
  <config>
    <label-space-name>0</label-space-name>
  </config>
</label-space>
</label-spaces>
<module-label-ranges>
<module-label-range>
  <module-name>rsvp</module-name>
  <config>
    <min-label>16</min-label>
    <max-label>16</max-label>
  </config>
</module-label-range>
</module-label-ranges>
</label-space>
</label-spaces>
</mpls>
```

Command Syntax

```
mpls (rsvp|ldp|ldp-vc|bgp) min-label-value <16-1048575> max-label-value <16-1048575> (label-space <0-60000>|)
```

Configure name

Use this attribute to create a new bandwidth class name. Using this command changes the command mode to Bandwidth-class mode

This command is supported when following feature are enabled TE feature

Attribute Name: name

Attribute Type: string

Netconf edit-config payload

```
<mpls xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mpls">
  <bandwidth-classes>
    <bandwidth-class> <!-- operation="delete"-->
      <name>NAME</name>
      <config>
        <name>WORD</name>
      </config>
    </bandwidth-class>
  </bandwidth-classes>
</mpls>
```

Command Syntax

```
mpls bandwidth-class NAME
```

Configure max bandwidth

Use this attribute to specify the maximum bandwidth to be used for a bandwidth-class. The bandwidth value is in bits

This command is supported when following feature are enabled TE feature

Attribute Name: max-bandwidth

Attribute Type: string

Attribute Name: setup-priority

Attribute Type: uint8

Attribute Range: 0-7

Attribute Name: hold-priority

Attribute Type: uint8

Attribute Range: 0-7

Netconf edit-config payload

```
<mpls xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mpls">
  <bandwidth-classes>
    <bandwidth-class>
      <name>NAME</name>
      <config>
        <name>WORD</name>
      </config>
    <properties>
      <config>
        <setup-priority>0</setup-priority>
        <hold-priority>0</hold-priority>
        <max-bandwidth>BANDWIDTH</max-bandwidth>
      </config>
    </properties>
  </bandwidth-class>
</bandwidth-classes>
</mpls>
```

```

</bandwidth-class>
</bandwidth-classes>
</mpls>

```

Command Syntax

```
bandwidth BANDWIDTH setup-priority <0-7> hold-priority <0-7>
```

IPI-MPLS-RIB

Configure route prefix

Use this attribute to specify the route prefix for which FEC mapping needs to be added

Attribute Name: route-prefix

Attribute Type: string

Attribute Name: mapped-fec

Attribute Type: string

Netconf edit-config payload

```

<mpls xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mpls">
<rib xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mpls-rib">
<map-route>
<static-ipv4-map-routes>
<static-ipv4-map-route> <!-- operation="delete"-->
  <route-prefix>A.B.C.D/M|A.B.C.D A.B.C.D</route-prefix>
  <config>
    <route-prefix>A.B.C.D/M|A.B.C.D A.B.C.D</route-prefix>
    <mapped-fec>A.B.C.D/M|A.B.C.D A.B.C.D</mapped-fec>
  </config>
</static-ipv4-map-route>
</static-ipv4-map-routes>
</map-route>
</rib>
</mpls>

```

Command Syntax

```
mpls map-route (A.B.C.D/M|A.B.C.D A.B.C.D) (A.B.C.D/M|A.B.C.D A.B.C.D)
```

Configure out interface name

Outgoing interface name

Attribute Name: out-interface-name

Attribute Type: string

Netconf edit-config payload

```
<mpls xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mpls">
```

```
<rib xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mpls-rib">
<static-lsps>
<ipv4-static-ftn-entries>
<ipv4-static-ftn-entry>
  <out-interface-name>IFNAME</out-interface-name>
  <config>
    <out-interface-name>IFNAME</out-interface-name>
    <nexthop-ip-address>A.B.C.D</nexthop-ip-address>
    <pushed-label>16</pushed-label>
    <fec-prefix>A.B.C.D/M|A.B.C.D A.B.C.D</fec-prefix>
  </config>
  <nexthop-ip-address>A.B.C.D</nexthop-ip-address>
  <pushed-label>16</pushed-label>
  <fec-prefix>A.B.C.D/M|A.B.C.D A.B.C.D</fec-prefix>
</ipv4-static-ftn-entry>
</ipv4-static-ftn-entries>
</static-lsps>
</rib>
</mpls>
```

Command Syntax

```
mpls ftn-entry (A.B.C.D/M|A.B.C.D A.B.C.D) <16-1048575> A.B.C.D IFNAME
```

Configure tunnel id

FTN tunnel-id value

Attribute Name: tunnel-id

Attribute Type: uint32

Attribute Range: 1-5000

Netconf edit-config payload

```
<mpls xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mpls">
<rib xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mpls-rib">
<static-lsps>
<static-ftn-tunnels>
<static-ftn-tunnel> <!-- operation="delete"-->
  <is-primary>primary</is-primary>
  <config>
    <is-primary>primary</is-primary>
    <out-interface-name>IFNAME</out-interface-name>
    <nexthop-ip-address>CML_IP_ADDR_T</nexthop-ip-address>
    <pushed-label>16</pushed-label>
    <fec-prefix>CML_IP_PREFIX_T</fec-prefix>
    <tunnel-id>1</tunnel-id>
  </config>
  <out-interface-name>IFNAME</out-interface-name>
  <nexthop-ip-address>CML_IP_ADDR_T</nexthop-ip-address>
  <pushed-label>16</pushed-label>
  <fec-prefix>CML_IP_PREFIX_T</fec-prefix>
```

```

        <tunnel-id>1</tunnel-id>
    </static-ftn-tunnel>
</static-ftn-tunnels>
</static-lsps>
</rib>
</mpls>

```

Command Syntax

```
mpls ftn-entry tunnel-id <1-5000> (A.B.C.D/M|A.B.C.D A.B.C.D) <16-1048575> A.B.C.D
IFNAME ((secondary|primary)|)
```

Configure tunnel id

FTN tunnel-id value

Attribute Name: tunnel-id

Attribute Type: uint32

Attribute Range: 1-5000

Netconf edit-config payload

```

<mpls xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mpls">
<rib xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mpls-rib">
<static-lsps>
<static-ftn-tunnels>
<static-ftn-tunnel> <!-- operation="delete"-->
    <is-primary>primary</is-primary>
    <config>
        <is-primary>primary</is-primary>
        <out-interface-name>IFNAME</out-interface-name>
        <nexthop-ip-address>CML_IP_ADDR_T</nexthop-ip-address>
        <pushed-label>16</pushed-label>

    <out-interface-name>IFNAME</out-interface-name>
    <nexthop-ip-address>CML_IP_ADDR_T</nexthop-ip-address>
    <pushed-label>16</pushed-label>
    <fec-prefix>CML_IP_PREFIX_T</fec-prefix>
    <tunnel-id>1</tunnel-id>
</static-ftn-tunnel>
</static-ftn-tunnels>
</static-lsps>
</rib>
</mpls>

```

Command Syntax

```
mpls ftn-entry tunnel-id <1-5000> X:X::X:X/M <16-1048575> X:X::X:X IFNAME
((secondary|primary)|)
```

Configure enable pop label

Use this attribute to create an ILM entry in the ILM table to which a POP incoming interface is bound. Upon receipt of a labeled packet on an MPLS-enabled router, a lookup is done based on the incoming label in the ILM table. If a match is found, the packet may either be label-switched downstream, or popped and passed over IP. In a pop operation, an outgoing label is not needed as is either accepted or forwarded over IP. The nexthop option is also not mandatory because the FEC IP address could be a local IP address

Attribute Name: enable-pop-label

Attribute Type: uint8

Netconf edit-config payload

```
<mpls xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mpls">
  <rib xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mpls-rib">
    <static-lsps>
      <static-ilm-entries>
        <static-ilm-entry>
          <incoming-label>16</incoming-label>
          <config>
            <incoming-label>16</incoming-label>
          </config>
          <pop>
            <config>
              </enable-pop-label>
            </config>
          </pop>
        </static-ilm-entry>
      </static-ilm-entries>
    </static-lsps>
  </rib>
</mpls>
```

Command Syntax

```
mpls ilm-entry <16-1048575> pop
```

Configure incoming label

Incoming Label

Attribute Name: incoming-label

Attribute Type: uint32

Attribute Range: 16-1048575

Attribute Name: in-interface-name

Attribute Type: string

Attribute Name: swapped-label

Attribute Type: uint32

Attribute Range: 16-1048575

Attribute Name: out-interface-name

Attribute Type: string

Attribute Name: nexthop-ip-address

Attribute Type: inet:ip-address

Attribute Name: fec-prefix

Attribute Type: union

Netconf edit-config payload

```

<mpls xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mpls">

Configure enable static flow label

Use this attribute to enable static flow label for VPWS Virtual Circuits.

Attribute Name: enable-static-flow-label

Attribute Type: empty

Attribute Name: enable-flow-label

Attribute Type: empty

Attribute Name: flow-label-direction

Attribute Type: enum (both|transmit|receive)

Netconf edit-config payload

```
<network-instances xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-network-
instance">
  <network-instance>
    <instance-name>NAME</instance-name>
    <config>
      <instance-name>WORD</instance-name>
      <instance-type>vpws</instance-type>
```

```

</config>
  <instance-type>vpws</instance-type>
<vpws-instance xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-l2vpn-vpws">

        <tunnel-name>NAME</tunnel-name>
    </pseudowire-fec129>
</vpws-instance>
</network-instance>
</network-instances>

```

Command Syntax

```

mpls l2-circuit NAME A.B.C.D agi NAME sai NAME tai NAME group-name NAME service-
tpid (dot1.q|dot1.ad|0x9100|0x9200) group-id <1-4294967295> control-word tunnel-
name NAME

```

Configure tunnel identifier

Use this attribute to specify the static tunnel-identifier to be used for MPLS Layer-2 Virtual Circuit.

This command is supported when following feature are enabled Generic FEC129 Feature

Attribute Name: tunnel-identifier

Attribute Type: uint32

Attribute Range: 1-5000

Attribute Name: group-name

Attribute Type: string

Attribute Range: 1-32

Attribute Name: service-tpid

Attribute Type: enum (dot1.q|dot1.ad|0x9100|0x9200)

Attribute Name: group-identifier

Attribute Type: uint32

Attribute Range: 1-4294967295

Attribute Name: enable-control-word

Attribute Type: empty

Netconf edit-config payload

        </raw>
      </pseudowire-fec129>
    </vpws-instance>
  </network-instance>
</network-instances>
```

Command Syntax

```
mpls l2-circuit NAME A.B.C.D agi NAME sai NAME tai NAME control-word mode raw
tunnel-id <1-5000>
```

Configure enable control word

Use this attribute to enable control word for MPLS Layer-2 Virtual Circuit.

This command is supported when following feature are enabled Generic FEC129 Feature

Attribute Name: enable-control-word

Attribute Type: empty

Attribute Name: group-name

Attribute Type: string

Attribute Range: 1-32

Attribute Name: group-identifier

Attribute Type: uint32

Attribute Range: 1-4294967295

Attribute Name: enable-raw-mode

Attribute Type: empty

Netconf edit-config payload

Configure service template

This attribute is used to configure service-template for vc-mode

Attribute Name: service-template

Attribute Type: string

Attribute Name: mode

Attribute Type: enum (standby|revertive)

Netconf edit-config payload

```

<vpws xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-l2vpn-vpws">
<interfaces>
<interface>
    <name>WORD</name>
    <config>

```

```

        <name>WORD</name>
    </config>
<pseudowire-modes>
<pseudowire-mode>
    <service-template>WORD</service-template>
    <config>
        <service-template>NAME</service-template>
        <mode>standby</mode>
    </config>
</pseudowire-mode>
</pseudowire-modes>
</interface>
</interfaces>
</vpws>

```

Command Syntax

```
vc-mode (standby|revertive) service-template NAME
```

Configure pseudowire name

Use this attribute to specify pseudowire name

Attribute Name: pseudowire-name

Attribute Type: string

Attribute Name: service-template-name

Attribute Type: string

Attribute Name: pseudowire-link-mode

Attribute Type: enum (primary|secondary)

Netconf edit-config payload

```

<vpws xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-l2vpn-vpws">

```

Command Syntax

```
vpls fib-entry <1-4294967295> spoke-vc WORD <16-52443> OUT-INTF <16-52443>
```

Configure instance name

Network Instance Name. For VRF and MAC VRF, instance name can be up to 32 chars long. For VPWS and VPLS instances, instance name can be up to 128 chars long. For L2NI (bridge) instance, instance name has to be a number between (1-32). For Cross-Connect, instance name can be up to 30 chars long. For Bridge-domain, instance, instance name has to be a number between (1-2147483647).

Attribute Name: instance-name

Attribute Type: string

Attribute Name: vpls-identifier

Attribute Type: uint32

Attribute Range: 1-4294967295

Netconf edit-config payload

```
<network-instances xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-network-
instance">
  <network-instance> <!-- operation="delete"-->
    <instance-type>vpls</instance-type>
    <config>
      <instance-type>vpls</instance-type>
      <instance-name>WORD</instance-name>
    </config>
    <instance-name>WORD</instance-name>
  </vpls-instance>
</config>
</vpls-instance>
</network-instance>
</network-instances>
```

Command Syntax

```
mpls vpls NAME <1-4294967295>
```

Configure service transport identifier

Specify service transport identifier

Attribute Name: service-transport-identifier

Attribute Type: enum (dot1.q|dot1.ad|0x9100|0x9200)

Netconf edit-config payload

```
<network-instances xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-network-
instance">
  <network-instance>
    <instance-name>WORD</instance-name>
    <config>
      <instance-name>WORD</instance-name>
      <instance-type>vpls</instance-type>
    </config>
    <instance-type>vpls</instance-type>
    <vpls-instance xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-l2vpn-vpls">

        <service-transport-identifier>dot1.q</service-transport-identifier> <!--
operation="delete"-->
      </config>
    </vpls-instance>
  </network-instance>
</network-instances>
```

Command Syntax

```
service-tpid (dot1.q|dot1.ad|0x9100|0x9200)
```

Configure maximum transmission unit

Set the Maximum Transmission Unit (MTU) size for a given VPLS instance. This size is signaled to peer VPLS routers

Attribute Name: maximum-transmission-unit

Attribute Type: uint16

Default Value: 1500

Attribute Range: 576-65535

Netconf edit-config payload

```
<network-instances xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-network-
instance">
  <network-instance>
    <instance-name>WORD</instance-name>
    <config>
      <instance-name>WORD</instance-name>
      <instance-type>vpls</instance-type>
    </config>
    <instance-type>vpls</instance-type>
    <vpls-instance xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-l2vpn-vpls">
      <config>
        <maximum-transmission-unit>576</maximum-transmission-unit> <!--
operation="delete"-->
      </config>
    </vpls-instance>
  </network-instance>
</network-instances>
```

Command Syntax

```
vpls-mtu <576-65535>
```

Configure vpls description

Specify a description for this VPLS instance

Attribute Name: vpls-description

Attribute Type: string

Default Value: NULL

Attribute Range: 1-64

Netconf edit-config payload

```
<network-instances xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-network-
instance">
  <network-instance>
    <instance-name>WORD</instance-name>
    <config>
      <instance-name>WORD</instance-name>
      <instance-type>vpls</instance-type>
    </config>
```

```
    <instance-type>vpls</instance-type>
  <vpls-instance xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-l2vpn-vpls">
    <config>
      <vpls-description>LINE</vpls-description> <!-- operation="delete"-->
    </config>
  </vpls-instance>
</network-instance>
</network-instances>
```

Command Syntax

vpls-description LINE

Configure control word

Control Word for VPLS instance

Attribute Name: control-word

Attribute Type: empty

Netconf edit-config payload

```
<network-instances xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-network-
instance">
  <network-instance>
    <instance-name>WORD</instance-name>
    <config>
      <instance-name>WORD</instance-name>
      <instance-type>vpls</instance-type>
    </config>
    <instance-type>vpls</instance-type>
    <vpls-instance xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-l2vpn-vpls">
      <config>
        </control-word><!-- operation="delete"-->
      </config>
    </vpls-instance>
  </network-instance>
</network-instances>
```

Command Syntax

control-word

Configure mac learning disable

Specify mac learning disable for VPLS instance

Attribute Name: mac-learning-disable

Attribute Type: empty

Netconf edit-config payload

```
<network-instances xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-network-
instance">
```

```

<network-instance>
  <instance-name>WORD</instance-name>
  <config>
    <instance-name>WORD</instance-name>
    <instance-type>vpls</instance-type>
  </config>
  <instance-type>vpls</instance-type>

    <config>
      </mac-learning-disable><!-- operation="delete"-->
    </config>
  </vpls-instance>
</network-instance>
</network-instances>

```

Command Syntax

learning disable

Configure mac learning limit

Specify mac learning limit

Attribute Name: mac-learning-limit

Attribute Type: uint32

Default Value: 32767

Attribute Range: 5-32767

Netconf edit-config payload

```

<network-instances xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-network-
instance">
  <network-instance>
    <instance-name>WORD</instance-name>
    <config>
      <instance-name>WORD</instance-name>
      <instance-type>vpls</instance-type>
    </config>
    <instance-type>vpls</instance-type>
    <vpls-instance xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-l2vpn-vpls">

        <mac-learning-limit>5</mac-learning-limit> <!-- operation="delete"-->
      </config>
    </vpls-instance>
  </network-instance>
</network-instances>

```

Command Syntax

learning limit <5-32767>

Configure attachment circuit group name

Specify ac-group name

Attribute Name: attachment-circuit-group-name

Attribute Type: string

Netconf edit-config payload

```
<network-instances xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-network-
instance">
  <network-instance>
    <instance-name>WORD</instance-name>
    <config>
      <instance-name>WORD</instance-name>
      <instance-type>vpls</instance-type>
    </config>
    <instance-type>vpls</instance-type>
    <vpls-instance xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-l2vpn-vpls">
      <config>
        <attachment-circuit-group-name>GROUPNAME</attachment-circuit-group-name>
      </config>
    </vpls-instance>
  </network-instance>
</network-instances>
```

<!-- operation="delete"-->

Command Syntax

```
vpls-ac-group GROUPNAME
```

Configure pseudowire type

Specify pseudowire type

Attribute Name: pseudowire-type

Attribute Type: enum (vlan|ethernet)

Default Value: ethernet

Netconf edit-config payload

```
<network-instances xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-network-
instance">
  <network-instance>
    <instance-name>WORD</instance-name>
    <config>

```

```

    <pseudowire-name>WORD</pseudowire-name>
    <config>
        <pseudowire-name>NAME</pseudowire-name>
    </config>
    <pseudowire-type>ethernet</pseudowire-type> <!-- operation="delete"-->
</spoke-pseudowire>
</spoke-pseudowires>
</vpls-instance>
</network-instance>
</network-instances>

```

Command Syntax

```
vpls-vc NAME ((vlan|ethernet)|)
```

Configure enable interface parameter tlv

Use this attribute to configure interface parameter tlv for VPLS Virtual Circuits.

Attribute Name: enable-interface-parameter-tlv

Attribute Type: empty

Attribute Name: enable-flow-label

Attribute Type: empty

Attribute Name: flow-label-direction

Attribute Type: enum (both|transmit|receive)

Netconf edit-config payload

```

<network-instances xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-network-
instance">
  <network-instance>
    <instance-name>WORD</instance-name>

</network-instances>
```

Command Syntax

```
flow-label (both|transmit|receive) static
```

Configure flow label direction

Use this attribute to configure flow label direction to transmit, receive or both for VPLS Virtual Circuits

Attribute Name: flow-label-direction

Attribute Type: enum (both|transmit|receive)

Attribute Name: enable-flow-label

Attribute Type: empty

Netconf edit-config payload

```

<network-instances xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-network-
instance">
  <network-instance>
    <instance-name>WORD</instance-name>

  <port-circuit-name>NAME</port-circuit-name>
  <vc-interface-name>WORD</vc-interface-name>
  <vc-access-type>VPLS_MPLS_ACCESS_TYPE_T</vc-access-type>
</clear-mpls-vpls-name-statistics-access-port>
```

Command Syntax

```
clear mpls vpls NAME statistics access-port WORD (vlan (<1-4094>)|ethernet)
```

clear mpls vpls NAME statistics

Attribute Name: vpls-circuit-name

Attribute Type: string

Netconf RPC payload

```
<clear-mpls-vpls-name-statistics xmlns="http://www.ipinfusion.com/yang/ocnos/
ipi-l2vpn-vpls">
  <vpls-circuit-name>NAME</vpls-circuit-name>
</clear-mpls-vpls-name-statistics>
```

Command Syntax

```
clear mpls vpls NAME statistics
```

clear mpls vpls NAME mac-addresses

Attribute Name: name

Attribute Type: string

Netconf RPC payload

```
<clear-mpls-vpls-mac-addresses-for-instance xmlns="http://www.ipinfusion.com/
yang/ocnos/ipi-l2vpn-vpls">
  <name>NAME</name>
</clear-mpls-vpls-mac-addresses-for-instance>
```

Command Syntax

```
clear mpls vpls NAME mac-addresses
```

clear mpls vpls mac-addresses

Netconf RPC payload

```
<clear-mpls-vpls-mac-addresses-all xmlns="http://www.ipinfusion.com/yang/ocnos/
ipi-l2vpn-vpls"/>
```

Command Syntax

```
clear mpls vpls mac-addresses
```

IPI-MCEC

Configure options

Use this attribute to debug the mlag feature.

Attribute Name: options

Attribute Type: bits (hello|info|timer|event|cli|mac-sync|stp|all)

Netconf edit-config payload

```
<mcec xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mcec">
  <debug>
  <config>
    <options>hello</options> <!-- operation="delete"-->
  </config>
</debug>
</mcec>
```

Command Syntax

```
debug mcec (hello|info|timer|event|cli|mac-sync|stp|all)
```

Configure system number

Use this attribute to configure domain system number, which uniquely identifies domain system in MCEC domain

Attribute Name: system-number

Attribute Type: uint8

Attribute Range: 1-2

Netconf edit-config payload

```
<mcec xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mcec">
  <domain>
  <config>
    <system-number>1</system-number> <!-- operation="delete"-->
  </config>
</domain>
</mcec>
```

Command Syntax

```
domain-system-number <1-2>
```

Configure address

Use this attribute configure domain address, which helps to identify the MCEC domain

Attribute Name: address

Attribute Type: string

Netconf edit-config payload

```
<mcec xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mcec">
  <domain>
    <config>
      <address>MAC</address> <!-- operation="delete"-->
    </config>
  </domain>
</mcec>
```

Command Syntax

```
domain-address MAC
```

Configure priority

Use this attribute to specify the priority value associated with MCEC domain

Attribute Name: priority

Attribute Type: uint16

Default Value: 32768

Attribute Range: 1-65535

Netconf edit-config payload

```
<mcec xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mcec">
  <domain>
    <config>
      <priority>1</priority> <!-- operation="delete"-->
    </config>
  </domain>
</mcec>
```

Command Syntax

```
domain-priority <1-65535>
```

Configure hello timeout

Use this attribute to specify the domain hello-timeout value

Attribute Name: hello-timeout

Attribute Type: enum (long|short)

Default Value: long

Netconf edit-config payload

```
<mcec xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mcec">
  <domain>
    <config>
      <hello-timeout>long</hello-timeout> <!-- operation="delete"-->
    </config>
  </domain>
</mcec>
```

Command Syntax

```
domain-hello-timeout (long|short)
```

Configure interface

Use this attribute to map an interface as intra domain link that connects the domain system with its neighbour in a mcec domain

Attribute Name: interface

Attribute Type: string

Netconf edit-config payload

```
<mcec xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mcec">
  <intra-domain>
    <peer-link>
      <config>
        <interface>IFNAME</interface> <!-- operation="delete"-->
      </config>
    </peer-link>
  </intra-domain>
</mcec>
```

Command Syntax

```
intra-domain-link IFNAME
```

Configure higig

Turn on/off higig on inter domain link

Attribute Name: higig

Attribute Type: empty

Netconf edit-config payload

```
<mcec xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mcec">
  <intra-domain>
    <peer-link>
      <config>
        </higig><!-- operation="delete"-->
      </config>
    </peer-link>
  </intra-domain>
</mcec>
```

```
</peer-link>  
</intra-domain>  
</mcec>
```

Command Syntax

```
idl-higig
```

Configure vrf

vrf of the peer DSN node

Attribute Name: vrf

Attribute Type: string

Attribute Name: peer-address

Attribute Type: inet:ipv4-address

Attribute Name: local-address

Attribute Type: inet:ipv4-address

Netconf edit-config payload

```
<mcec xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mcec">  
  <intra-domain>  
    <peer-address>  
      <config>  
        <peer-address>A.B.C.D</peer-address>  
        <local-address>A.B.C.D</local-address>  
        <vrf>VRF_NAME</vrf>  
      </config>  
    </peer-address>  
  </intra-domain>  
</mcec>
```

Command Syntax

```
intra-domain-peer A.B.C.D source-address A.B.C.D (vrf VRF_NAME|)
```

Configure interface mode

Use this attribute to set the MC-LAG mode. active-standby: The interface is ready to transition from active to standby state should a failure occur in the other node.

Attribute Name: interface-mode

Attribute Type: enum (active-standby|active-active)

Default Value: active-active

Netconf edit-config payload

```
<mcec xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mcec">  
  <mrag-interfaces>  
    <mrag-interface>  
      <name>WORD</name>
```

```
<config>
  <name>WORD</name>
</config>
<interface-mode>active-active</interface-mode> <!-- operation="delete"-->
</mlog-interface>
</mlog-interfaces>
</mcec>
```

Command Syntax

```
mode (active-standby|active-active)
```

Configure revertive timer

Use this attribute to set the timer for MC-LAG switchover revertive type. After Revertive timer expires Slave will handover the control to Master Node. If a failure happens that triggers a switchover, after failure recovery the initially-active node becomes active again. Default switchover type is revertive 10s.

Attribute Name: revertive-timer

Attribute Type: uint8

Default Value: 10

Attribute Range: 1-255

Netconf edit-config payload

```
<mcec xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mcec">
  <mlog-interfaces>
    <mlog-interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
    <switchover-type>
      <config>
        <revertive-timer>1</revertive-timer> <!-- operation="delete"-->
      </config>
    </switchover-type>
  </mlog-interface>
</mlog-interfaces>
</mcec>
```

Command Syntax

```
switchover type revertive <1-255>
```

Configure enable non revertive

Use this attribute to set the MC-LAG switchover to non-revertive type. Do not switch back to the initially-active node after failure recovery. Default switchover type is revertive 10s.

Attribute Name: enable-non-revertive

Attribute Type: empty

Netconf edit-config payload

```
<mcec xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mcec">
  <mlog-interfaces>
    <mlog-interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
    <switchover-type>
      <config>
        </enable-non-revertive><!-- operation="delete"-->
      </config>
    </switchover-type>
  </mlog-interface>
</mlog-interfaces>
</mcec>
```

Command Syntax

```
switchover type non-revertive
```

debug mcec (hello|info|timer|event|cli|mac-sync|stp|all)

Attribute Name: terminal-debug-options

Attribute Type: bits (hello|info|timer|event|cli|mac-sync|stp|all)

Netconf RPC payload

```
<mcec-terminal-debug-on xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mcec">
  <terminal-debug-options>hello</terminal-debug-options>
</mcec-terminal-debug-on>
```

Command Syntax

```
debug mcec (hello|info|timer|event|cli|mac-sync|stp|all)
```

no debug mcec (hello|info|timer|event|cli|mac-sync|stp|all)

Attribute Name: terminal-debug-options

Attribute Type: bits (hello|info|timer|event|cli|mac-sync|stp|all)

Netconf RPC payload

```
<mcec-terminal-debug-off xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mcec">
  <terminal-debug-options>hello</terminal-debug-options>
</mcec-terminal-debug-off>
```

Command Syntax

```
no debug mcec (hello|info|timer|event|cli|mac-sync|stp|all)
```

clear mcec statistics

Netconf RPC payload

```
<clear-mcec-statistics xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mcec"/>
```

Command Syntax

```
clear mcec statistics
```

reload-trigger-mcec-notification

Netconf RPC payload

```
<trigger-reload xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mcec"/>
```

Command Syntax

```
reload-trigger-mcec-notification
```

IPI-MLAG

Configure mlag id

MLAG group number

Attribute Name: mlag-id

Attribute Type: uint16

Attribute Range: 1-255

Netconf edit-config payload

```
<interfaces xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-interface">
  <interface>
    <name>IFNAME</name>
    <config>
      <name>IFNAME</name>
    </config>
    <mlag-aggregation xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mlag">
      <config>
        <mlag-id>1</mlag-id>
      </config>
    </mlag-aggregation>
  </interface>
</interfaces>
```

Command Syntax

```
mlag <1-255>
```

reload-trigger-save-mlag-info

Netconf RPC payload

```
<trigger-save-mlag-info xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mlag"/>
```

Command Syntax

```
reload-trigger-save-mlag-info
```

IPI-PLATFORM

Configure enable cmm

Use this attribute to turn on debugging for chassis monitoring

Attribute Name: enable-cmm

Attribute Type: empty

Netconf edit-config payload

```
<components xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <debug>
    <config>
      </enable-cmm><!-- operation="delete"-->
    </config>
  </debug>
</components>
```

Command Syntax

```
debug cmm
```

Configure enable ddm

Use this attribute to turn on debugging for digital diagnostic monitoring

Attribute Name: enable-ddm

Attribute Type: empty

Netconf edit-config payload

```
<components xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <debug>
    <config>
      </enable-ddm><!-- operation="delete"-->
    </config>
  </debug>
</components>
```

Command Syntax

```
debug ddm
```

Configure warning repeat

To enable cmm warning level logs to repeat.

Attribute Name: warning-repeat

Attribute Type: empty

Netconf edit-config payload

```
<components xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <global>
    <config>
      </warning-repeat><!-- operation="delete"-->
    </config>
  </global>
</components>
```

Command Syntax

```
cmm warning repeat
```

Configure locator led enable

To set the locator-led on or off.

Attribute Name: locator-led-enable

Attribute Type: empty

Netconf edit-config payload

```
<components xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <global>
    <config>
      </locator-led-enable><!-- operation="delete"-->
    </config>
  </global>
</components>
```

Command Syntax

```
locator-led on
```

Configure ddm monitor time interval

To set DDM Monitor interval time.

Attribute Name: ddm-monitor-time-interval

Attribute Type: uint16

Attribute Range: 60-3600

Netconf edit-config payload

```
<components xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <global>
```

```
<config>
  <ddm-monitor-time-interval>60</ddm-monitor-time-interval> <!--
operation="delete"-->
</config>
</global>
</components>
```

Command Syntax

```
ddm monitor interval <60-3600>
```

Configure service unsupported transceiver

To enable DDM Monitor for unsupported transceivers at user risk.

Attribute Name: service-unsupported-transceiver

Attribute Type: empty

Netconf edit-config payload

```
<components xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <global>
    <config>
      </service-unsupported-transceiver><!-- operation="delete"-->
    </config>
  </global>
</components>
```

Command Syntax

```
service unsupported-transceiver
```

Configure enable ddm monitor

To enable DDM monitor for all transceivers.

Attribute Name: enable-ddm-monitor

Attribute Type: empty

Netconf edit-config payload

```
<components xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <global>
    <config>
      </enable-ddm-monitor><!-- operation="delete"-->
    </config>
  </global>
</components>
```

Command Syntax

```
ddm monitor all
```

Configure system 15min load avg alarm

System 15min average load for alarm

Attribute Name: system-15min-load-avg-alarm

Attribute Type: uint8

Attribute Range: 51-100

Netconf edit-config payload

```
<components xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <global>
    <system-load-average-thresholds>
      <system-load-average-threshold> <!-- operation="delete"-->
        <system-15min-load-avg-alarm>51</system-15min-load-avg-alarm>
        <config>
          <system-15min-load-avg-alarm>51</system-15min-load-avg-alarm>
          <system-5min-load-avg-alarm>51</system-5min-load-avg-alarm>
          <system-1min-load-avg-alarm>51</system-1min-load-avg-alarm>
          <system-1min-load-avg-warning-threshold>41</system-1min-load-avg-warning-
threshold>
        </config>
        <system-5min-load-avg-alarm>51</system-5min-load-avg-alarm>
        <system-1min-load-avg-alarm>51</system-1min-load-avg-alarm>
        <system-1min-load-avg-warning-threshold>41</system-1min-load-avg-warning-
threshold>
      </system-load-average-threshold>
    </system-load-average-thresholds>
  </global>
</components>
```

Command Syntax

```
system-load-average 1min warning <41-100> alarm <51-100> 5min alarm <51-100> 15min
alarm <51-100>
```

Configure alarm threshold

Cpu threshold for alarm

Attribute Name: alarm-threshold

Attribute Type: uint8

Attribute Range: 91-100

Netconf edit-config payload

```
<components xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <global>
    <cpu-core-usage-thresholds>
      <cpu-core-usage-threshold> <!-- operation="delete"-->
        <alarm-threshold>91</alarm-threshold>
      <config>
        <alarm-threshold>91</alarm-threshold>
      </config>
    </cpu-core-usage-thresholds>
  </global>
</components>
```

```

        <warning-threshold>51</warning-threshold>
    </config>
    <warning-threshold>51</warning-threshold>
</cpu-core-usage-threshold>
</cpu-core-usage-thresholds>
</global>
</components>

```

Command Syntax

```
cpu-core-usage warning <51-100> alarm <91-100>
```

Configure monitor port

To enable DDM monitor for current transceiver.

This command is supported when following feature are disabled Tibit MicroPlug OLT feature

Attribute Name: monitor-port

Attribute Type: enum (disable|enable)

Netconf edit-config payload

```

<components xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <interfaces>
    <interface>
      <interface-name>WORD</interface-name>
      <config>
        <interface-name>WORD</interface-name>
      </config>
      <monitor-port>disable</monitor-port> <!-- operation="delete"-->
    </interface>
  </interfaces>
</components>

```

Command Syntax

```
ddm monitor (disable|enable)
```

Configure poe enable

To enable PoE for current interface.

This command is supported when following feature are disabled Tibit MicroPlug OLT feature

Attribute Name: poe-enable

Attribute Type: empty

Netconf edit-config payload

```

<components xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <interfaces>
    <interface>
      <interface-name>WORD</interface-name>
      <config>

```

```
<interface-name>WORD</interface-name>
</config>
</poe-enable><!-- operation="delete"-->
</interface>
</interfaces>
</components>
```

Command Syntax

poe-enable

Configure transceiver code

To set transceiver code for current transceiver.

This command is supported when following feature are disabled Tibit MicroPlug OLT feature

Attribute Name: transceiver-code

Attribute Type: enum (1000base-sx|1000base-lx|1000base-ex|1000base-cx|10gbase-sr|10gbase-lr|10gbase-er|10gbase-cr|25gbase-sr|25gbase-lr|25gbase-er|25gbase-cr|40gbase-sr4|40gbase-lr4|40gbase-er4|40gbase-cr4|100gbase-sr4|100gbase-lr4|100gbase-er4|100gbase-cr4)

Netconf edit-config payload

```
<components xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
<interfaces>
<interface>
  <interface-name>WORD</interface-name>
  <config>
    <interface-name>WORD</interface-name>
  </config>
  <transceiver-code>1000base-sx</transceiver-code> <!-- operation="delete"-->
</interface>
</interfaces>
</components>
```

Command Syntax

```
transceiver (1000base-sx|1000base-lx|1000base-ex|1000base-cx|10gbase-sr|10gbase-
lr|10gbase-er|10gbase-cr|25gbase-sr|25gbase-lr|25gbase-er|25gbase-cr|40gbase-
sr4|40gbase-lr4|40gbase-er4|40gbase-cr4|100gbase-sr4|100gbase-lr4|100gbase-
er4|100gbase-cr4)
```

Configure wavelength

wavelength

This command is supported when following feature are disabled Tibit MicroPlug OLT feature

Attribute Name: wavelength

Attribute Type: union

Netconf edit-config payload

```
<components xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
```

```
<interfaces>
<interface>
  <interface-name>WORD</interface-name>
  <config>
    <interface-name>WORD</interface-name>
  </config>
  <wavelength>CML_WAVELENGTH_T</wavelength>
</interface>
</interfaces>
</components>
```

Command Syntax

```
wavelength (channel-number <1-96>|update <1528773-1566723>)
```

Configure tx disable

To disable laser tx for current transceiver.

This command is supported when following feature are disabled Tibit MicroPlug OLT feature

Attribute Name: tx-disable

Attribute Type: empty

Netconf edit-config payload

```
<components xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
<interfaces>
<interface>
  <interface-name>WORD</interface-name>
  <config>
    <interface-name>WORD</interface-name>
  </config>
  </tx-disable><!-- operation="delete"-->
</interface>
</interfaces>
</components>
```

Command Syntax

```
tx-disable
```

Configure edfa operating mode

To set the EDFA operating mode

This command is supported when following feature are disabled Tibit MicroPlug OLT feature

Attribute Name: edfa-operating-mode

Attribute Type: enum (agc|apc)

Netconf edit-config payload

```
<components xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
<interfaces>
```

```
<interface>
  <interface-name>WORD</interface-name>
  <config>
    <interface-name>WORD</interface-name>
  </config>
  <edfa-operating-mode>agc</edfa-operating-mode> <!-- operation="delete"-->
</interface>
</interfaces>
</components>
```

Command Syntax

```
edfa operating-mode (agc|apc)
```

Configure edfa target outpwr

To set the target-outpwr

This command is supported when following feature are disabled Tibit MicroPlug OLT feature

Attribute Name: edfa-target-outpwr

Attribute Type: decimal64

Netconf edit-config payload

```
<components xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <interfaces>
    <interface>
      <interface-name>WORD</interface-name>
      <config>
        <interface-name>WORD</interface-name>
      </config>
      <edfa-target-outpwr>VALUE</edfa-target-outpwr> <!-- operation="delete"-->
    </interface>
  </interfaces>
</components>
```

Command Syntax

```
edfa target-outpwr VALUE
```

Configure edfa target gain

To set the target-gain

This command is supported when following feature are disabled Tibit MicroPlug OLT feature

Attribute Name: edfa-target-gain

Attribute Type: decimal64

Netconf edit-config payload

```
<components xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <interfaces>
    <interface>
```

```
<interface-name>WORD</interface-name>
<config>
  <interface-name>WORD</interface-name>
</config>
<edfa-target-gain>VALUE</edfa-target-gain> <!-- operation="delete"-->
</interface>
</interfaces>
</components>
```

Command Syntax

```
edfa target-gain VALUE
```

Configure interval

To set disk activity sampling window interval time.

Attribute Name: interval

Attribute Type: uint16

Attribute Range: 30-1200

Netconf edit-config payload

```
<components xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <disk-activity-monitoring>
    <config>
      <interval>30</interval> <!-- operation="delete"-->
    </config>
  </disk-activity-monitoring>
</components>
```

Command Syntax

```
disk-activity-monitoring interval <30-1200>
```

Configure read threshold

To set disk read activity alarm threshold.

Attribute Name: read-threshold

Attribute Type: uint32

Attribute Range: 1-20000

Netconf edit-config payload

```
<components xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <disk-activity-monitoring>
    <config>
      <read-threshold>1</read-threshold> <!-- operation="delete"-->
    </config>
  </disk-activity-monitoring>
</components>
```

Command Syntax

```
disk-activity-monitoring threshold read <1-20000>
```

Configure write threshold

To set disk write activity alarm threshold.

Attribute Name: write-threshold

Attribute Type: uint32

Attribute Range: 1-20000

Netconf edit-config payload

```
<components xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <disk-activity-monitoring>
    <config>
      <write-threshold>1</write-threshold> <!-- operation="delete"-->
    </config>
  </disk-activity-monitoring>
</components>
```

Command Syntax

```
disk-activity-monitoring threshold write <1-20000>
```

clear ddm transceiver alarm all

Netconf RPC payload

```
<ddm-clear-transceiver-alarm-all xmlns="http://www.ipinfusion.com/yang/ocnos/
ipi-platform"/>
```

Command Syntax

```
clear ddm transceiver alarm all
```

clear ddm transceiver alarm

Attribute Name: name

Attribute Type: string

Netconf RPC payload

```
<ddm-clear-transceiver-alarm xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-
platform">
  <name>WORD</name>
</ddm-clear-transceiver-alarm>
```

Command Syntax

```
clear ddm transceiver alarm
```

debug ddm

Netconf RPC payload

```
<cmm-terminal-debug-ddm-on xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-  
platform"/>
```

Command Syntax

```
debug ddm
```

no debug ddm

Netconf RPC payload

```
<cmm-terminal-debug-ddm-off xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-  
platform"/>
```

Command Syntax

```
no debug ddm
```

debug cmm

Netconf RPC payload

```
<cmm-terminal-debug-cmm-on xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-  
platform"/>
```

Command Syntax

```
debug cmm
```

no debug cmm

Netconf RPC payload

```
<cmm-terminal-debug-cmm-off xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-  
platform"/>
```

Command Syntax

```
no debug cmm
```

IPI-PLATFORM-PROFILE

Configure egress ipv6

Use this attribute to enable or disable Egress IPv6 filter groups. Disabling filter groups increases the configurable filter entries.

Attribute Name: egress-ipv6

Attribute Type: enum (disable|enable)

Netconf edit-config payload

```
<profiles xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <hardware-profile>
    <filters>
      <config>
        <egress-ipv6>disable</egress-ipv6> <!-- operation="delete"-->
      </config>
    </filters>
  </hardware-profile>
</profiles>
```

Command Syntax

```
hardware-profile filter egress-ipv6 (disable|enable)
```

Configure ingress ipv6 acl

Use this attribute to enable or disable Ingress IPv6 filter groups. Disabling filter groups increases the configurable filter entries.

Attribute Name: ingress-ipv6-acl

Attribute Type: enum (disable|enable)

Netconf edit-config payload

```
<profiles xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <hardware-profile>
    <filters>
      <config>
        <ingress-ipv6-acl>disable</ingress-ipv6-acl> <!-- operation="delete"-->
      </config>
    </filters>
  </hardware-profile>
</profiles>
```

Command Syntax

```
hardware-profile filter ingress-ipv6 (disable|enable)
```

Configure ingress ipv4 custom0

Use this attribute to enable or disable Ingress IPv4 filter groups. Disabling filter groups increases the configurable filter entries.

Attribute Name: ingress-ipv4-custom0

Attribute Type: enum (disable|enable)

Netconf edit-config payload

```
<profiles xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <hardware-profile>
    <filters>
      <config>
        <ingress-ipv4-custom0>disable</ingress-ipv4-custom0> <!-- operation="delete"-->
      </config>
    </filters>
  </hardware-profile>
</profiles>
```

```
</config>
</filters>
</hardware-profile>
</profiles>
```

Command Syntax

```
hardware-profile filter ingress-ipv4 (disable|enable)
```

Configure ingress arp

Use this attribute to enable or disable Ingress ARP filter groups.

Attribute Name: ingress-arp

Attribute Type: empty

Netconf edit-config payload

```
<profiles xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <hardware-profile>
    <filters>
      <config>
        </ingress-arp><!-- operation="delete"-->
      </config>
    </filters>
  </hardware-profile>
</profiles>
```

Command Syntax

```
hardware-profile filter ingress-arp enable
```

Configure ingress bfd

Use this attribute to enable or disable Ingress BFD filter groups. Disabling filter groups increases the configurable filter entries.

Attribute Name: ingress-bfd

Attribute Type: enum (disable|enable)

Netconf edit-config payload

```
<profiles xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <hardware-profile>
    <filters>
      <config>
        <ingress-bfd>disable</ingress-bfd> <!-- operation="delete"-->
      </config>
    </filters>
  </hardware-profile>
</profiles>
```

Command Syntax

```
hardware-profile filter bfd-group (disable|enable)
```

Configure isolation

Use this attribute to enable or disable port isolation. Disabling filter groups increases the configurable filter entries.

Attribute Name: isolation

Attribute Type: enum (disable|enable)

Netconf edit-config payload

```
<profiles xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <hardware-profile>
    <filters>
      <config>
        <isolation>disable</isolation> <!-- operation="delete"-->
      </config>
    </filters>
  </hardware-profile>
</profiles>
```

Command Syntax

```
hardware-profile filter port-isolation (disable|enable)
```

Configure profile

This Object is to check forwarding profile limit

This command is supported when following feature are enabled bcm uft feature and following feature are disabled dune feature

Attribute Name: profile

Attribute Type: enum (l2-profile-one|l2-profile-two|l2-profile-three|l3-profile|l3-128bit-profile|lpm-profile|lpm-128bit-profile|custom-profile)

Default Value: l2-profile-three

Netconf edit-config payload

```
<profiles xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <forwarding-profiles>
    <config>
      <profile>l2-profile-three</profile> <!-- operation="delete"-->
    </config>
  </forwarding-profiles>
</profiles>
```

Command Syntax

```
forwarding profile (l2-profile-one|l2-profile-two|l2-profile-three|l3-profile|l3-
128bit-profile|lpm-profile)
```

Configure profile

This Object is to check forwarding profile limit

This command is supported when following feature are enabled bcm uft feature and following feature are disabled dune feature

Attribute Name: profile

Attribute Type: enum (l2-profile-one|l2-profile-two|l2-profile-three|l3-profile|l3-128bit-profile|lpm-profile|lpm-128bit-profile|custom-profile)

Default Value: l2-profile-three

Netconf edit-config payload

```
<profiles xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <forwarding-profiles>
    <config>
      <profile>l2-profile-three</profile> <!-- operation="delete"-->
    </config>
  </forwarding-profiles>
</profiles>
```

Command Syntax

```
forwarding profile (l2-profile-one|l2-profile-two|l2-profile-three|l3-profile|l3-
128bit-profile|lpm-profile|lpm-128bit-profile|custom-profile)
```

Configure profile

This Object is to check forwarding profile limit

This command is supported when following feature are enabled bcm uft feature and following feature are disabled dune feature

Attribute Name: profile

Attribute Type: enum (l2-profile-one|l2-profile-two|l2-profile-three|l3-profile|l3-128bit-profile|lpm-profile|lpm-128bit-profile|custom-profile)

Default Value: l2-profile-three

Netconf edit-config payload

```
<profiles xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <forwarding-profiles>
    <config>
      <profile>l2-profile-three</profile> <!-- operation="delete"-->
    </config>
  </forwarding-profiles>
</profiles>
```

Command Syntax

```
forwarding profile (l2-profile-one|l2-profile-two|l2-profile-three|l3-profile|l3-
128bit-profile|custom-profile)
```

Configure mpls ip payload

This Object is set for load balancing based on MPLS IP payload

This command is supported when following feature are enabled broadcom feature

Attribute Name: mpls-ip-payload

Attribute Type: empty

Attribute Name: mpls-label-based

Attribute Type: empty

Netconf edit-config payload

```
<hardware xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <load-balance>
    <config>
      </mpls-label-based><!-- operation="delete"-->
      </mpls-ip-payload><!-- operation="delete"-->
    </config>
  </load-balance>
</hardware>
```

Command Syntax

```
load-balance rtag7 mpls labels ip-payload
```

Configure mpls label based

This Object is set for load balancing based on mpls labels

This command is supported when following feature are enabled broadcom feature

Attribute Name: mpls-label-based

Attribute Type: empty

Attribute Name: mpls-ip-payload

Attribute Type: empty

Netconf edit-config payload

```
<hardware xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <load-balance>
    <config>
      </mpls-ip-payload><!-- operation="delete"-->
      </mpls-label-based><!-- operation="delete"-->
    </config>
  </load-balance>
</hardware>
```

Command Syntax

```
load-balance rtag7 mpls ip-payload labels
```

Configure enable

This Object is set loadBalance

This command is supported when following feature are enabled broadcom feature

Attribute Name: enable

Attribute Type: empty

Netconf edit-config payload

```
<hardware xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <load-balance>
    <config>
      </enable>
    </config>
  </load-balance>
</hardware>
```

Command Syntax

```
load-balance rtag7
```

Configure mpls label based

This Object is set for load balancing based on mpls labels

This command is supported when following feature are enabled broadcom feature

Attribute Name: mpls-label-based

Attribute Type: empty

Netconf edit-config payload

```
<hardware xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <load-balance>
    <config>
      </mpls-label-based><!-- operation="delete"-->
    </config>
  </load-balance>
</hardware>
```

Command Syntax

```
load-balance rtag7 mpls labels
```

Configure mpls ip payload

This Object is set for load balancing based on MPLS IP payload

This command is supported when following feature are enabled broadcom feature

Attribute Name: mpls-ip-payload

Attribute Type: empty

Netconf edit-config payload

```
<hardware xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <load-balance>
    <config>
      </mpls-ip-payload><!-- operation="delete"-->
    </config>
  </load-balance>
```

```
</hardware>
```

Command Syntax

```
load-balance rtag7 mpls ip-payload
```

Configure hash

This Object is used to set (hash values)CRC

This command is supported when following feature are enabled broadcom feature

Attribute Name: hash

Attribute Type: enum (crc16-bisync|crc16-ccitt|crc32-lo|crc32-hi)

Netconf edit-config payload

```
<hardware xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <load-balance>
    <config>
      <hash>crc16-bisync</hash> <!-- operation="delete"-->
    </config>
  </load-balance>
</hardware>
```

Command Syntax

```
load-balance rtag7 hash (crc16-bisync|crc16-ccitt|crc32-lo|crc32-hi)
```

Configure macro flow based

macro-flow based dynamic hash selection

This command is supported when following feature are enabled broadcom feature

Attribute Name: macro-flow-based

Attribute Type: empty

Netconf edit-config payload

```
<hardware xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <load-balance>
    <config>
      </macro-flow-based><!-- operation="delete"-->
    </config>
  </load-balance>
</hardware>
```

Command Syntax

```
load-balance rtag7 macro-flow
```

Configure vlan based

This Object is set for Vlan based load balancing

This command is supported when following feature are enabled L2 feature,broadcom feature

Attribute Name: vlan-based

Attribute Type: empty

Attribute Name: dest-mac-based

Attribute Type: empty

Attribute Name: src-mac-based

Attribute Type: empty

Attribute Name: ether-type-based

Attribute Type: empty

Netconf edit-config payload

```
<hardware xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <load-balance>
    <l2>
      <config>
        </dest-mac-based><!-- operation="delete"-->
        </src-mac-based><!-- operation="delete"-->
        </ether-type-based><!-- operation="delete"-->
        </vlan-based><!-- operation="delete"-->
      </config>
    </l2>
  </load-balance>
</hardware>
```

Command Syntax

```
load-balance rtag7 l2 { dest-mac| src-mac| ether-type| vlan }
```

Configure symmetric

Symmetric load balancing

This command is supported when following feature are enabled L3 feature,broadcom feature

Attribute Name: symmetric

Attribute Type: empty

Attribute Name: src-ipv4-address-based

Attribute Type: empty

Attribute Name: dest-ipv4-address-based

Attribute Type: empty

Attribute Name: src-l4-port-based

Attribute Type: empty

Attribute Name: dest-l4-port-based

Attribute Type: empty

Attribute Name: protocol-id-based

Attribute Type: empty

Netconf edit-config payload

```
<hardware xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <load-balance>
    <ipv4>
      <config>
        </src-ipv4-address-based><!-- operation="delete"-->
        </dest-ipv4-address-based><!-- operation="delete"-->
        </src-l4-port-based><!-- operation="delete"-->
        </dest-l4-port-based><!-- operation="delete"-->
        </protocol-id-based><!-- operation="delete"-->
        </symmetric><!-- operation="delete"-->
      </config>
    </ipv4>
  </load-balance>
</hardware>
```

Command Syntax

```
load-balance rtag7 ipv4 { src-ipv4| dest-ipv4| srcl4-port| destl4-port| protocol-
id| symmetric }
```

Configure symmetric

Symmetric load balancing

This command is supported when following feature are enabled L3 feature,broadcom feature

Attribute Name: symmetric

Attribute Type: empty

Attribute Name: src-ipv6-address-based

Attribute Type: empty

Attribute Name: dest-ipv6-address-based

Attribute Type: empty

Attribute Name: src-l4-port-based

Attribute Type: empty

Attribute Name: dest-l4-port-based

Attribute Type: empty

Attribute Name: next-header-based

Attribute Type: empty

Netconf edit-config payload

```
<hardware xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <load-balance>
    <ipv6>
      <config>
        </src-ipv6-address-based><!-- operation="delete"-->

```

```

    </dest-ipv6-address-based><!-- operation="delete"-->
    </src-l4-port-based><!-- operation="delete"-->
    </dest-l4-port-based><!-- operation="delete"-->
    </next-header-based><!-- operation="delete"-->
    </symmetric><!-- operation="delete"-->
</config>
</ipv6>
</load-balance>
</hardware>

```

Command Syntax

```
load-balance rtag7 ipv6 { src-ipv6| dest-ipv6| srcl4-port| destl4-port| next-hdr|
symmetric }
```

Configure queue name

This attribute specifies CPU queue name for rate limiting config

Attribute Name: queue-name

Attribute Type: enum (best-effort|ipmc-miss|l3-miss|sflow|bgp|vrrp|ldp-rsvp|rip|ospf|dhcp|nd|mpls|pim|arp|igmp|bpdu|ccm|bfd|isis|acl|vxlan)

Attribute Name: rate

Attribute Type: int32

Attribute Range: 0-100000

Netconf edit-config payload

```

<hardware xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <cpu-queue>
    <rate-limits>
      <rate-limit>
        <queue-name>best-effort</queue-name>
        <config>
          <queue-name>best-effort</queue-name>
          <rate>0</rate>
        </config>
      </rate-limit>
    </rate-limits>
  </cpu-queue>
</hardware>

```

Command Syntax

```
cpu-queue (best-effort|ipmc-miss|l3-miss|sflow|bgp|vrrp|ldp-
rsvp|rip|ospf|dhcp|nd|mpls|pim|arp|igmp|bpdu|ccm|bfd|isis|acl|vxlan) rate <0-
100000>
```

Configure queue name

This attribute specifies CPU queue name for rate limiting config

Attribute Name: queue-name

Attribute Type: enum (best-effort|ipmc-miss|l3-miss|sflow|bgp|vrrp|ldp-rsvp|rip|ospf|dhcp|nd|mpls|pim|arp|igmp|bpdu|ccm|bfd|isis|acl|vxlan)

Attribute Name: monitor

Attribute Type: enum (no-monitor|monitor)

Netconf edit-config payload

```
<hardware xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <cpu-queue>
    <rate-limits>
      <rate-limit>
        <queue-name>best-effort</queue-name>
        <config>
          <queue-name>best-effort</queue-name>
          <monitor>no-monitor</monitor>
        </config>
      </rate-limit>
    </rate-limits>
  </cpu-queue>
</hardware>
```

Command Syntax

```
cpu-queue (best-effort|ipmc-miss|l3-miss|sflow|bgp|vrrp|ldp-
  rsvp|rip|ospf|dhcp|nd|mpls|pim|arp|igmp|bpdu|ccm|bfd|isis|acl|vxlan) (no-
  monitor|monitor)
```

Configure queue name

This attribute specifies CPU queue name for rate limiting config

Attribute Name: queue-name

Attribute Type: enum (best-effort|ipmc-miss|l3-miss|sflow|bgp|vrrp|ldp-rsvp|rip|ospf|dhcp|nd|mpls|pim|arp|igmp|bpdu|ccm|bfd|isis|acl|vxlan)

Attribute Name: lossy

Attribute Type: enum (lossless|lossy)

Netconf edit-config payload

```
<hardware xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <cpu-queue>
    <rate-limits>
      <rate-limit>
        <queue-name>best-effort</queue-name>
        <config>
          <queue-name>best-effort</queue-name>
          <lossy>lossless</lossy>
        </config>
      </rate-limit>
    </rate-limits>
  </cpu-queue>
</hardware>
```

```
</cpu-queue>
</hardware>
```

Command Syntax

```
cpu-queue (best-effort|ipmc-miss|l3-miss|sflow|bgp|vrrp|ldp-
  rsvp|rip|ospf|dhcp|nd|mpls|pim|arp|igmp|bpdu|ccm|bfd|isis|acl|vxlan)
  (lossless|lossy)
```

Configure queue name

This attribute specifies CPU queue name for rate limiting config

Attribute Name: queue-name

Attribute Type: enum (best-effort|ipmc-miss|l3-miss|sflow|bgp|vrrp|ldp-
rsvp|rip|ospf|dhcp|nd|mpls|pim|arp|igmp|bpdu|ccm|bfd|isis|acl|vxlan)

Attribute Name: rate

Attribute Type: int32

Attribute Range: 0-100000

Attribute Name: monitor

Attribute Type: enum (no-monitor|monitor)

Netconf edit-config payload

```
<hardware xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <cpu-queue>
    <rate-limits>
      <rate-limit>
        <queue-name>best-effort</queue-name>
        <config>
          <queue-name>best-effort</queue-name>
          <rate>0</rate>
          <monitor>no-monitor</monitor>
        </config>
      </rate-limit>
    </rate-limits>
  </cpu-queue>
</hardware>
```

Command Syntax

```
cpu-queue (best-effort|ipmc-miss|l3-miss|sflow|bgp|vrrp|ldp-
  rsvp|rip|ospf|dhcp|nd|mpls|pim|arp|igmp|bpdu|ccm|bfd|isis|acl|vxlan) rate <0-
  100000> (no-monitor|monitor)
```

Configure queue name

This attribute specifies CPU queue name for rate limiting config

Attribute Name: queue-name

Attribute Type: enum (best-effort|ipmc-miss|l3-miss|sflow|bgp|vrrp|ldp-rsvp|rip|ospf|dhcp|nd|mpls|pim|arp|igmp|bpdu|ccm|bfd|isis|acl|vxlan)

Attribute Name: rate

Attribute Type: int32

Attribute Range: 0-100000

Attribute Name: lossy

Attribute Type: enum (lossless|lossy)

Netconf edit-config payload

```
<hardware xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <cpu-queue>
    <rate-limits>
      <rate-limit>
        <queue-name>best-effort</queue-name>
        <config>
          <queue-name>best-effort</queue-name>
          <rate>0</rate>
          <lossy>lossless</lossy>
        </config>
      </rate-limit>
    </rate-limits>
  </cpu-queue>
</hardware>
```

Command Syntax

```
cpu-queue (best-effort|ipmc-miss|l3-miss|sflow|bgp|vrrp|ldp-
  rsvp|rip|ospf|dhcp|nd|mpls|pim|arp|igmp|bpdu|ccm|bfd|isis|acl|vxlan) rate <0-
  100000> (lossless|lossy)
```

Configure queue name

This attribute specifies CPU queue name for rate limiting config

Attribute Name: queue-name

Attribute Type: enum (best-effort|ipmc-miss|l3-miss|sflow|bgp|vrrp|ldp-rsvp|rip|ospf|dhcp|nd|mpls|pim|arp|igmp|bpdu|ccm|bfd|isis|acl|vxlan)

Attribute Name: monitor

Attribute Type: enum (no-monitor|monitor)

Attribute Name: rate

Attribute Type: int32

Attribute Range: 0-100000

Netconf edit-config payload

```
<hardware xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <cpu-queue>
    <rate-limits>
```

```

<rate-limit>
  <queue-name>best-effort</queue-name>
  <config>
    <queue-name>best-effort</queue-name>
    <monitor>no-monitor</monitor>
    <rate>0</rate>
  </config>
</rate-limit>
</rate-limits>
</cpu-queue>
</hardware>

```

Command Syntax

```

cpu-queue (best-effort|ipmc-miss|l3-miss|sflow|bgp|vrrp|ldp-
  rsvp|rip|ospf|dhcp|nd|mpls|pim|arp|igmp|bpdu|ccm|bfd|isis|acl|vxlan) (no-
  monitor|monitor) rate <0-100000>

```

Configure queue name

This attribute specifies CPU queue name for rate limiting config

Attribute Name: queue-name

Attribute Type: enum (best-effort|ipmc-miss|l3-miss|sflow|bgp|vrrp|ldp-
rsvp|rip|ospf|dhcp|nd|mpls|pim|arp|igmp|bpdu|ccm|bfd|isis|acl|vxlan)

Attribute Name: monitor

Attribute Type: enum (no-monitor|monitor)

Attribute Name: lossy

Attribute Type: enum (lossless|lossy)

Netconf edit-config payload

```

<hardware xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <cpu-queue>
    <rate-limits>
      <rate-limit>
        <queue-name>best-effort</queue-name>
        <config>
          <queue-name>best-effort</queue-name>
          <monitor>no-monitor</monitor>
          <lossy>lossless</lossy>
        </config>
      </rate-limit>
    </rate-limits>
  </cpu-queue>
</hardware>

```

Command Syntax

```

cpu-queue (best-effort|ipmc-miss|l3-miss|sflow|bgp|vrrp|ldp-
  rsvp|rip|ospf|dhcp|nd|mpls|pim|arp|igmp|bpdu|ccm|bfd|isis|acl|vxlan) (no-
  monitor|monitor) (lossless|lossy)

```

Configure queue name

This attribute specifies CPU queue name for rate limiting config

Attribute Name: queue-name

Attribute Type: enum (best-effort|ipmc-miss|l3-miss|sflow|bgp|vrrp|ldp-rsvp|rip|ospf|dhcp|nd|mpls|pim|arp|igmp|bpdu|ccm|bfd|isis|acl|vxlan)

Attribute Name: lossy

Attribute Type: enum (lossless|lossy)

Attribute Name: rate

Attribute Type: int32

Attribute Range: 0-100000

Netconf edit-config payload

```
<hardware xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <cpu-queue>
    <rate-limits>
      <rate-limit>
        <queue-name>best-effort</queue-name>
        <config>
          <queue-name>best-effort</queue-name>
          <lossy>lossless</lossy>
          <rate>0</rate>
        </config>
      </rate-limit>
    </rate-limits>
  </cpu-queue>
</hardware>
```

Command Syntax

```
cpu-queue (best-effort|ipmc-miss|l3-miss|sflow|bgp|vrrp|ldp-
  rsvp|rip|ospf|dhcp|nd|mpls|pim|arp|igmp|bpdu|ccm|bfd|isis|acl|vxlan)
  (lossless|lossy) rate <0-100000>
```

Configure queue name

This attribute specifies CPU queue name for rate limiting config

Attribute Name: queue-name

Attribute Type: enum (best-effort|ipmc-miss|l3-miss|sflow|bgp|vrrp|ldp-rsvp|rip|ospf|dhcp|nd|mpls|pim|arp|igmp|bpdu|ccm|bfd|isis|acl|vxlan)

Attribute Name: lossy

Attribute Type: enum (lossless|lossy)

Attribute Name: monitor

Attribute Type: enum (no-monitor|monitor)

Netconf edit-config payload

```
<hardware xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <cpu-queue>
    <rate-limits>
      <rate-limit>
        <queue-name>best-effort</queue-name>
        <config>
          <queue-name>best-effort</queue-name>
          <lossy>lossless</lossy>
          <monitor>no-monitor</monitor>
        </config>
      </rate-limit>
    </rate-limits>
  </cpu-queue>
</hardware>
```

Command Syntax

```
cpu-queue (best-effort|ipmc-miss|l3-miss|sflow|bgp|vrrp|ldp-
  rsvp|rip|ospf|dhcp|nd|mpls|pim|arp|igmp|bpdu|ccm|bfd|isis|acl|vxlan)
  (lossless|lossy) (no-monitor|monitor)
```

Configure queue name

This attribute specifies CPU queue name for rate limiting config

Attribute Name: queue-name

Attribute Type: enum (best-effort|ipmc-miss|l3-miss|sflow|bgp|vrrp|ldp-rsvp|rip|ospf|dhcp|nd|mpls|pim|arp|igmp|bpdu|ccm|bfd|isis|acl|vxlan)

Attribute Name: rate

Attribute Type: int32

Attribute Range: 0-100000

Attribute Name: monitor

Attribute Type: enum (no-monitor|monitor)

Attribute Name: lossy

Attribute Type: enum (lossless|lossy)

Netconf edit-config payload

```
<hardware xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <cpu-queue>
    <rate-limits>
      <rate-limit>
        <queue-name>best-effort</queue-name>
        <config>
          <queue-name>best-effort</queue-name>
          <rate>0</rate>
          <monitor>no-monitor</monitor>
          <lossy>lossless</lossy>
        </config>
      </rate-limit>
    </rate-limits>
  </cpu-queue>
</hardware>
```

```
</config>
</rate-limit>
</rate-limits>
</cpu-queue>
</hardware>
```

Command Syntax

```
cpu-queue (best-effort|ipmc-miss|l3-miss|sflow|bgp|vrrp|ldp-
  rsvp|rip|ospf|dhcp|nd|mpls|pim|arp|igmp|bpdu|ccm|bfd|isis|acl|vxlan) rate <0-
  100000> (no-monitor|monitor) (lossless|lossy)
```

Configure queue name

This attribute specifies CPU queue name for rate limiting config

Attribute Name: queue-name

Attribute Type: enum (best-effort|ipmc-miss|l3-miss|sflow|bgp|vrrp|ldp-
rsvp|rip|ospf|dhcp|nd|mpls|pim|arp|igmp|bpdu|ccm|bfd|isis|acl|vxlan)

Attribute Name: rate

Attribute Type: int32

Attribute Range: 0-100000

Attribute Name: lossy

Attribute Type: enum (lossless|lossy)

Attribute Name: monitor

Attribute Type: enum (no-monitor|monitor)

Netconf edit-config payload

```
<hardware xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <cpu-queue>
    <rate-limits>
      <rate-limit>
        <queue-name>best-effort</queue-name>
      </rate-limit>
    </rate-limits>
  </cpu-queue>
</hardware>
```

Command Syntax

```
cpu-queue (best-effort|ipmc-miss|l3-miss|sflow|bgp|vrrp|ldp-
  rsvp|rip|ospf|dhcp|nd|mpls|pim|arp|igmp|bpdu|ccm|bfd|isis|acl|vxlan) rate <0-
  100000> (lossless|lossy) (no-monitor|monitor)
```

Configure queue name

This attribute specifies CPU queue name for rate limiting config

Attribute Name: queue-name

Attribute Type: enum (best-effort|ipmc-miss|l3-miss|sflow|bgp|vrrp|ldp-rsvp|rip|ospf|dhcp|nd|mpls|pim|arp|igmp|bpdu|ccm|bfd|isis|acl|vxlan)

Attribute Name: monitor

Attribute Type: enum (no-monitor|monitor)

Attribute Name: rate

Attribute Type: int32

Attribute Range: 0-100000

Attribute Name: lossy

Attribute Type: enum (lossless|lossy)

Netconf edit-config payload

```
<hardware xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <cpu-queue>
    <rate-limits>

</hardware>
```

Command Syntax

```
cpu-queue (best-effort|ipmc-miss|l3-miss|sflow|bgp|vrrp|ldp-
  rsvp|rip|ospf|dhcp|nd|mpls|pim|arp|igmp|bpdu|ccm|bfd|isis|acl|vxlan)
  (lossless|lossy) (no-monitor|monitor) rate <0-100000>
```

cpu-q-default rate <0-100000>

Attribute Name: rate

Attribute Type: uint32

Attribute Range: 0-100000

Netconf RPC payload

```
<ipi-platform-profile_platform-profile-cpu-q-rate-set xmlns="http://
www.ipinfusion.com/yang/ocnos/ipi-platform">
  <rate>0</rate>
</ipi-platform-profile_platform-profile-cpu-q-rate-set>
```

Command Syntax

```
cpu-q-default rate <0-100000>
```

no cpu-q-default rate

Attribute Name: rate

Attribute Type: empty

Netconf RPC payload

```
<ipi-platform-profile_platform-profile-cpu-q-rate-unset xmlns="http://
www.ipinfusion.com/yang/ocnos/ipi-platform">
  <rate>CML_EMPTY_T</rate>
</ipi-platform-profile_platform-profile-cpu-q-rate-unset>
```

Command Syntax

```
no cpu-q-default rate
```

IPI-PLATFORM-PROFILE-EXTENDED

Configure enable mac ageing timer

Use this command to enable or disable the MAC ageing timer calculation in control plane

Attribute Name: enable-mac-ageing-timer

Attribute Type: empty

Netconf edit-config payload

```
<hardware xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
```

```

<mac-ageing>
<config>
    </enable-mac-ageing-timer><!-- operation="delete"-->
</config>
</mac-ageing>
</hardware>

```

Command Syntax

```
mac-ageing-display
```

Configure soc

Attribute to indicate the SoC running on this platform. This attribute cannot be configured.

Attribute Name: soc

Attribute Type: enum

(qax|qux|qmx|dnx|tomahawk|tomahawk2|tomahawk3|tomahawkplus|trident2|trident2plus|trident3|helix4|saber2|maverick2|hurricane4|unknown)

Netconf edit-config payload

```

<hardware xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
<platform>
<config>
    <soc>qax</soc> <!-- operation="delete"-->
</config>
</platform>
</hardware>

```

Command Syntax

```

platform-extended-soc
(qax|qux|qmx|dnx|tomahawk|tomahawk2|tomahawk3|tomahawkplus|trident2|trident2plus|trident3|helix4|saber2|maverick2|hurricane4|unknown)

```

Configure lpm banks

Use this attribute to set Sets memory allocation profile - Use 'show forwarding profile limit' to check size

This command is supported when following feature are enabled bcm uft feature and following feature are disabled dune feature

Attribute Name: lpm-banks

Attribute Type: enum (2)

Attribute Name: l2-banks

Attribute Type: uint8

Attribute Range: 1-24

Attribute Name: l3-banks

Attribute Type: uint8

Attribute Range: 1-23

Netconf edit-config payload

```
<profiles xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <forwarding-profiles>
    <custom-profile>
      <config>
        <l2-banks>1</l2-banks> <!-- operation="delete"-->
        <l3-banks>1</l3-banks> <!-- operation="delete"-->
        <lpm-banks>2</lpm-banks> <!-- operation="delete"-->
      </config>
    </custom-profile>
  </forwarding-profiles>
</profiles>
```

Command Syntax

```
forwarding custom-profile { l2-banks <1-24>| l3-banks <1-23>| lpm-banks (2) }
```

Configure ep vlan xlate banks

Use this attribute to set Sets memory allocation profile - Use 'show forwarding profile limit' to check size

This command is supported when following feature are enabled bcm uft feature and following feature are disabled dune feature

Attribute Name: ep-vlan-xlate-banks

Attribute Type: uint8

Attribute Range: 1-23

Attribute Name: l2-banks

Attribute Type: uint8

Attribute Range: 1-24

Attribute Name: l3-banks

Attribute Type: uint8

Attribute Range: 1-23

Attribute Name: vlan-xlate-banks

Attribute Type: uint8

Attribute Range: 1-23

Netconf edit-config payload

```
<profiles xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <forwarding-profiles>
    <custom-profile>
      <config>
        <l2-banks>1</l2-banks> <!-- operation="delete"-->
        <l3-banks>1</l3-banks> <!-- operation="delete"-->
        <vlan-xlate-banks>1</vlan-xlate-banks> <!-- operation="delete"-->
        <ep-vlan-xlate-banks>1</ep-vlan-xlate-banks> <!-- operation="delete"-->
      </config>
    </custom-profile>
  </forwarding-profiles>
</profiles>
```

```
</forwarding-profiles>
</profiles>
```

Command Syntax

```
forwarding custom-profile { l2-banks <1-24>| l3-banks <1-23>| vlan-xlate-banks <1-
23>| ep-vlan-xlate-banks <1-23> }
```

Configure mpls banks

Use this attribute to set Sets memory allocation profile - Use 'show forwarding profile limit' to check size

This command is supported when following feature are enabled bcm uft feature and following feature are disabled dune feature

Attribute Name: mpls-banks

Attribute Type: uint8

Attribute Range: 1-23

Attribute Name: l2-banks

Attribute Type: uint8

Attribute Range: 1-24

Attribute Name: l3-banks

Attribute Type: uint8

Attribute Range: 1-23

Attribute Name: vlan-xlate-banks

Attribute Type: uint8

Attribute Range: 1-23

Attribute Name: ep-vlan-xlate-banks

Attribute Type: uint8

Attribute Range: 1-23

Netconf edit-config payload

```
<profiles xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <forwarding-profiles>
    <custom-profile>
      <config>
        <l2-banks>1</l2-banks> <!-- operation="delete"-->
        <l3-banks>1</l3-banks> <!-- operation="delete"-->
        <vlan-xlate-banks>1</vlan-xlate-banks> <!-- operation="delete"-->
        <ep-vlan-xlate-banks>1</ep-vlan-xlate-banks> <!-- operation="delete"-->
        <mpls-banks>1</mpls-banks> <!-- operation="delete"-->
      </config>
    </custom-profile>
  </forwarding-profiles>
</profiles>
```

Command Syntax

```
forwarding custom-profile { l2-banks <1-24>| l3-banks <1-23>| vlan-xlate-banks <1-23>| ep-vlan-xlate-banks <1-23>| mpls-banks <1-23> }
```

Configure outer l3 header

Used to set Load balance tunneled packets based on outer header

This command is supported when following feature are enabled L3 feature and following feature are disabled dune feature

Attribute Name: outer-l3-header

Attribute Type: empty

Netconf edit-config payload

```
<hardware xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <load-balance>
    <tunnel>
      <config>
        </outer-l3-header><!-- operation="delete"-->
      </config>
    </tunnel>
  </load-balance>
</hardware>
```

Command Syntax

```
load-balance rtag7 tunnel outer-l3-header
```

Configure dest mac based

VXLAN Destination MAC address based load balancing

This command is supported when following feature are enabled vxlan feature and following feature are disabled dune feature

Attribute Name: dest-mac-based

Attribute Type: empty

Attribute Name: src-mac-based

Attribute Type: empty

Netconf edit-config payload

```
<hardware xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <load-balance>
    <vxlan>
      <inner-l2>
        <config>
          </src-mac-based><!-- operation="delete"-->
          </dest-mac-based><!-- operation="delete"-->
        </config>
      </inner-l2>
    </vxlan>
  </load-balance>
</hardware>
```

```

</vxlan>
</load-balance>
</hardware>

```

Command Syntax

```
load-balance rtag7 vxlan inner-l2 { dest-mac| src-mac }
```

Configure src ip based

VXLAN Source IP

This command is supported when following feature are enabled vxlan feature and following feature are disabled dune feature

Attribute Name: src-ip-based

Attribute Type: empty

Attribute Name: dest-ip-based

Attribute Type: empty

Attribute Name: src-l4-port-based

Attribute Type: empty

Attribute Name: dest-l4-port-based

Attribute Type: empty

Attribute Name: protocol-id-based

Attribute Type: empty

Netconf edit-config payload

```

<hardware xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <load-balance>
    <vxlan>
      <inner-l3>
        <config>
          </dest-ip-based><!-- operation="delete"-->
          </src-l4-port-based><!-- operation="delete"-->
          </dest-l4-port-based><!-- operation="delete"-->
          </protocol-id-based><!-- operation="delete"-->
          </src-ip-based><!-- operation="delete"-->
        </config>
      </inner-l3>
    </vxlan>
  </load-balance>
</hardware>

```

Command Syntax

```
load-balance rtag7 vxlan inner-l3 { src-ip| dest-ip| srcl4-port| destl4-port|
  protocol-id }
```

Configure dest mac based

mpls destination Mac address based load balancing

This command is supported when following feature are disabled dune feature

Attribute Name: dest-mac-based

Attribute Type: empty

Attribute Name: src-mac-based

Attribute Type: empty

Attribute Name: ether-type-based

Attribute Type: empty

Attribute Name: vlan-based

Attribute Type: empty

Netconf edit-config payload

```
<hardware xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <load-balance>
    <mpls-ler>
      <inner-l2>
        <config>
          </src-mac-based><!-- operation="delete"-->
          </ether-type-based><!-- operation="delete"-->
          </vlan-based><!-- operation="delete"-->
          </dest-mac-based><!-- operation="delete"-->
        </config>
      </inner-l2>
    </mpls-ler>
  </load-balance>
</hardware>
```

Command Syntax

```
load-balance rtag7 mpls-ler inner-l2 { dest-mac| src-mac| ether-type| vlan }
```

Configure src ip address based

Source IP

This command is supported when following feature are disabled dune feature

Attribute Name: src-ip-address-based

Attribute Type: empty

Attribute Name: dest-ip-address-based

Attribute Type: empty

Attribute Name: src-l4-port-based

Attribute Type: empty

Attribute Name: dest-l4-port-based

Attribute Type: empty

Attribute Name: protocol-id-based

Attribute Type: empty

Netconf edit-config payload

```
<hardware xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <load-balance>
    <mpls-ler>
      <inner-l3>
        <config>
          </dest-ip-address-based><!-- operation="delete"-->
          </src-l4-port-based><!-- operation="delete"-->
          </dest-l4-port-based><!-- operation="delete"-->
          </protocol-id-based><!-- operation="delete"-->
          </src-ip-address-based><!-- operation="delete"-->
        </config>
      </inner-l3>
    </mpls-ler>
  </load-balance>
</hardware>
```

Command Syntax

```
load-balance rtag7 mpls-ler inner-l3 { src-ip| dest-ip| srcl4-port| destl4-port|
  protocol-id }
```

Configure disable vxlan

This Object is to disable the control packets to CPU

This command is supported when following feature are enabled vxlan feature and following feature are disabled dune feature

Attribute Name: disable-vxlan

Attribute Type: empty

Netconf edit-config payload

```
<hardware xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <cpu-control>
    <packets>
      <config>
        </disable-vxlan><!-- operation="delete"-->
      </config>
    </packets>
  </cpu-control>
</hardware>
```

Command Syntax

```
l3-protocols-cpu-disable vxlan
```

Configure type

This Object is used to set LACP port-channel load-balancing and set port selection criteria (PSC) on an interface

This command is supported when following feature are enabled lacp feature and following feature are disabled dune feature

Attribute Name: type

Attribute Type: enum (dst-mac|src-mac|src-dst-mac|src-ip|dst-ip|src-dst-ip|rtag7)

Netconf edit-config payload

```
<hardware xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <load-balance>
    <port-channel>
      <interfaces>
        <interface>
          <name>WORD</name>
          <config>
            <name>WORD</name>
            </config>
            <type>dst-mac</type> <!-- operation="delete"-->
          </interface>
        </interfaces>
      </port-channel>
    </load-balance>
  </hardware>
```

Command Syntax

```
port-channel load-balance (dst-mac|src-mac|src-dst-mac|src-ip|dst-ip|src-dst-
ip|rtag7)
```

IPI-PLATFORM-CMIS

Configure fp port

Front port panel number

Attribute Name: fp-port

Attribute Type: uint8

Netconf edit-config payload

```
<qsfp-dds xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <qsfp-dd> <!-- operation="delete"-->
    <fp-port>0</fp-port>
    <config>
      <fp-port>0</fp-port>
    </config>
  </qsfp-dd>
</qsfp-dds>
```

Command Syntax

```
qsfp-dd <0-255>
```

Configure application

Application configuration

Attribute Name: application

Attribute Type: uint8

Attribute Range: 2-15

Netconf edit-config payload

```
<qsfp-dds xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <qsfp-dd>
    <fp-port>0</fp-port>
    <config>
      <fp-port>0</fp-port>
    </config>
    <application>2</application> <!-- operation="delete"-->
  </qsfp-dd>
</qsfp-dds>
```

Command Syntax

```
application <2-15>
```

Configure service disable

To disable the service for a particular port

Attribute Name: service-disable

Attribute Type: empty

Netconf edit-config payload

```
<qsfp-dds xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <qsfp-dd>
    <fp-port>0</fp-port>
    <config>
      <fp-port>0</fp-port>
    </config>
    </service-disable><!-- operation="delete"-->
  </qsfp-dd>
</qsfp-dds>
```

Command Syntax

```
service-disable
```

Configure type

PRBS pattern type for generator/checker

Attribute Name: type

Attribute Type: enum (31q|31|23q|23|15q|15|13q|13|9q|9|7q|7|ssprq)

Netconf edit-config payload

```
<qsfp-dds xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <qsfp-dd>
    <fp-port>0</fp-port>
    <config>
      <fp-port>0</fp-port>
    </config>
  </qsfp-dd>
</qsfp-dds>

<host>
<prbs>
<generator>
<config>
  <type>31q</type> <!-- operation="delete"-->
</config>
</generator>
</prbs>
</host>
</qsfp-dd>
</qsfp-dds>
```

Command Syntax

```
prbs generator type (31q|31|23q|23|15q|15|13q|13|9q|9|7q|7|ssprq) host
```

Configure location

PRBS pattern generator/checker location

Attribute Name: location

Attribute Type: enum (pre-fec|post-fec)

Netconf edit-config payload

```
<qsfp-dds xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <qsfp-dd>
    <fp-port>0</fp-port>
    <config>
      <fp-port>0</fp-port>
    </config>
  </qsfp-dd>
</qsfp-dds>

<host>
<prbs>
<generator>
<config>
  <location>pre-fec</location> <!-- operation="delete"-->
</config>
</generator>
</prbs>
</host>
</qsfp-dd>
</qsfp-dds>
```

Command Syntax

```
prbs generator (pre-fec|post-fec) host
```

Configure type

PRBS pattern type for generator/checker

Attribute Name: type

Attribute Type: enum (31q|31|23q|23|15q|15|13q|13|9q|9|7q|7|ssprq)

Netconf edit-config payload

```
<qsfp-dds xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <qsfp-dd>
    <fp-port>0</fp-port>
    <config>
      <fp-port>0</fp-port>
    </config>
  </qsfp-dd>
  <host>
    <prbs>
      <checker>
        <config>
          <type>31q</type> <!-- operation="delete"-->
        </config>
      </checker>
    </prbs>
  </host>
</qsfp-dds>
```

Command Syntax

```
prbs checker type (31q|31|23q|23|15q|15|13q|13|9q|9|7q|7|ssprq) host
```

Configure location

PRBS pattern generator/checker location

Attribute Name: location

Attribute Type: enum (pre-fec|post-fec)

Netconf edit-config payload

```
<qsfp-dds xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <qsfp-dd>
    <fp-port>0</fp-port>
    <config>
      <fp-port>0</fp-port>
    </config>
  </qsfp-dd>
  <host>
    <prbs>
      <checker>
        <config>
          <location>pre-fec</location>

  <interface-name>IFNAME</interface-name>
  <vlan-id>1</vlan-id>
</ipi-platform-transceiver-tibit_tibit-olt-microplug-set-management-vlan-id>
```

Command Syntax

```
tibit-olt-microplug set interface IFNAME management-vlan-id <1-4094>
```

tibit-olt-microplug set interface IFNAME ethernet-mac-address XX:XX:XX:XX:XX:XX

Attribute Name: interface-name

Attribute Type: string

Attribute Name: mac-address

Attribute Type: yang:mac-address

Netconf RPC payload

```
<ipi-platform-transceiver-tibit_tibit-olt-microplug-set-ethernet-mac-address
xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <interface-name>IFNAME</interface-name>
  <mac-address>XX:XX:XX:XX:XX:XX</mac-address>
</ipi-platform-transceiver-tibit_tibit-olt-microplug-set-ethernet-mac-address>
```

Command Syntax

```
tibit-olt-microplug set interface IFNAME ethernet-mac-address XX:XX:XX:XX:XX:XX
```

tibit-olt-microplug set interface IFNAME next-active-firmware-bank-id <0-3>

Attribute Name: interface-name

Attribute Type: string

Attribute Name: bank-id

Attribute Type: uint8

Attribute Range: 0-3

Netconf RPC payload

```
<ipi-platform-transceiver-tibit_tibit-olt-microplug-set-next-active-firmware-
bank xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <interface-name>IFNAME</interface-name>

</ipi-platform-transceiver-tibit_tibit-olt-microplug-set-next-active-firmware-
bank>
```

Command Syntax

```
tibit-olt-microplug set interface IFNAME next-active-firmware-bank-id <0-3>
```

tibit-olt-microplug reboot interface IFNAME

Attribute Name: interface-name

Attribute Type: string

Netconf RPC payload

```
<ipi-platform-transceiver-tibit_tibit-olt-microplug-reboot xmlns="http://
www.ipinfusion.com/yang/ocnos/ipi-platform">
  <interface-name>IFNAME</interface-name>
</ipi-platform-transceiver-tibit_tibit-olt-microplug-reboot>
```

Command Syntax

```
tibit-olt-microplug reboot interface IFNAME
```

IPI-PLATFORM-TRANSCIVER-SMART-SFP

Configure xcvr loopback remote

Use this attribute to set TX/RX loopback for remote

Attribute Name: xcvr-loopback-remote

Attribute Type: enum (in|out)

Netconf edit-config payload

```
<smart-sfp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform-transceiver-
smart-sfp">
  <interfaces>
    <interface>
      <interface-name>IFNAME</interface-name>
      <config>
        <interface-name>WORD</interface-name>
      </config>
      <xcvr-loopback-remote>in</xcvr-loopback-remote> <!-- operation="delete"-->
    </interface>
  </interfaces>
</smart-sfp>
```

Command Syntax

```
xcvr loopback (in|out) remote
```

xcvr IFNAME tx-disable <1-256> remote

Attribute Name: if-name

Attribute Type: string

Attribute Name: xcvr-tx-disable-duration

Attribute Type: uint16

Attribute Range: 1-256

Netconf RPC payload

```
<smart-sfp-xcvr-txdisable-duration xmlns="http://www.ipinfusion.com/yang/ocnos/
ipi-platform-transceiver-smart-sfp">
  <if-name>IFNAME</if-name>
  <xcvr-tx-disable-duration>1</xcvr-tx-disable-duration>
</smart-sfp-xcvr-txdisable-duration>
```

Command Syntax

```
xcvr IFNAME tx-disable <1-256> remote
```

xcvr IFNAME reset remote

Attribute Name: if-name

Attribute Type: string

Netconf RPC payload

```
<smart-sfp-xcvr-reset-remote xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-
platform-transceiver-smart-sfp">
  <if-name>IFNAME</if-name>
</smart-sfp-xcvr-reset-remote>
```

Command Syntax

```
xcvr IFNAME reset remote
```

IPI-AUTHENTICATION

Configure mac authentication

Use this attribute to enable MAC authentication globally. If MAC authentication is not enabled, other MAC authentication related commands throw an error when issued.

This command is supported when following feature are enabled HAVE_AUTHD feature

Attribute Name: mac-authentication

Attribute Type: empty

Netconf edit-config payload

```
<authentication xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-authentication">
  <global>
    <config>
      </mac-authentication><!-- operation="delete"-->
    </config>
  </global>
</authentication>
```

Command Syntax

```
auth-mac system-auth-ctrl
```

Configure dot1x authentication

Use this attribute to enable globally authentication.

This command is supported when following feature are enabled HAVE_AUTHD feature

Attribute Name: dot1x-authentication

Attribute Type: empty

Netconf edit-config payload

```
<authentication xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-authentication">
  <global>
    <config>
      </dot1x-authentication><!-- operation="delete"-->
    </config>
  </global>
</authentication>
```

Command Syntax

```
dot1x system-auth-ctrl
```

Configure dot1x control

Use this attribute to enable or disable the 802.1X authentication control on an interface.

This command is supported when following feature are enabled HAVE_AUTHD feature

Attribute Name: dot1x-control

Attribute Type: enum (force-unauthorized|force-authorized|auto)

Netconf edit-config payload

```
<authentication xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-authentication">
  <dot1x-interfaces>
    <dot1x-interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      <dot1x-control>force-authorized</dot1x-control>
    </dot1x-interface>
  </dot1x-interfaces>
</authentication>
```

```
</dot1x-interface>
</dot1x-interfaces>
</authentication>
```

Command Syntax

```
dot1x port-control (force-unauthorized|force-authorized|auto)
```

Configure protocol version

Use this attribute to set the protocol version of dot1x to 1 or 2. The protocol version must be synchronized with the Xsupplicant being used in that interface.

This command is supported when following feature are enabled HAVE_AUTHD feature

Attribute Name: protocol-version

Attribute Type: enum (1|2)

Netconf edit-config payload

```
<authentication xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-authentication">
  <dot1x-interfaces>
    <dot1x-interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      <protocol-version>2</protocol-version> <!-- operation="delete"-->
    </dot1x-interface>
  </dot1x-interfaces>
</authentication>
```

Command Syntax

```
dot1x protocol-version (1|2)
```

Configure quiet period

Use this attribute to set the quiet-period time interval. When a switch cannot authenticate a client, the switch remains idle for a quiet-period interval of time, then tries again. By administratively changing the quiet-period interval, by entering a lower number than the default, a faster response time can be provided

This command is supported when following feature are enabled HAVE_AUTHD feature

Attribute Name: quiet-period

Attribute Type: uint16

Attribute Range: 1-65535

Netconf edit-config payload

```
<authentication xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-authentication">
  <dot1x-interfaces>
    <dot1x-interface>
      <name>WORD</name>
      <config>
```

```
        <name>WORD</name>
    </config>
<authenticator-pae>
<config>
    <quiet-period>1</quiet-period> <!-- operation="delete"-->
</config>
</authenticator-pae>
</dot1x-interface>
</dot1x-interfaces>
</authentication>
```

Command Syntax

```
dot1x quiet-period <1-65535>
```

Configure max reauth value

Use this attribute to set the maximum reauthentication value, which sets the maximum number of reauthentication attempts after which the port will be unauthorized.

This command is supported when following feature are enabled HAVE_AUTHD feature

Attribute Name: max-reauth-value

Attribute Type: uint8

Attribute Range: 1-10

Netconf edit-config payload

```
<authentication xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-authentication">
<dot1x-interfaces>
<dot1x-interface>
    <name>WORD</name>
    <config>
        <name>WORD</name>
    </config>
<authenticator-pae>
<config>
    <max-reauth-value>1</max-reauth-value> <!-- operation="delete"-->
</config>
</authenticator-pae>
</dot1x-interface>
</dot1x-interfaces>
</authentication>
```

Command Syntax

```
dot1x reauthMax <1-10>
```

Configure interval period

Use this attribute to set the interval between successive attempts to request an ID.

This command is supported when following feature are enabled HAVE_AUTHD feature

Attribute Name: interval-period

Attribute Type: uint16

Attribute Range: 1-65535

Netconf edit-config payload

```
<authentication xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-authentication">
  <dot1x-interfaces>
    <dot1x-interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
    <authenticator-pae>
      <config>
        <interval-period>1</interval-period> <!-- operation="delete"-->
      </config>
    </authenticator-pae>
  </dot1x-interface>
</dot1x-interfaces>
</authentication>
```

Command Syntax

```
dot1x timeout tx-period <1-65535>
```

Configure reauthentication period

Use this attribute to set the interval between reauthorization attempts.

This command is supported when following feature are enabled HAVE_AUTHD feature

Attribute Name: reauthentication-period

Attribute Type: uint32

Attribute Range: 1-4294967295

Netconf edit-config payload

```
<authentication xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-authentication">
  <dot1x-interfaces>
    <dot1x-interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
    <reauthentication-timer>
      <config>
        <reauthentication-period>1</reauthentication-period> <!-- operation="delete"-->
      </config>
    </reauthentication-timer>
  </dot1x-interface>
</dot1x-interfaces>
```

```
</authentication>
```

Command Syntax

```
dot1x timeout re-authperiod <1-4294967295>
```

Configure enable reauthentication

Use this attribute to enable reauthentication on a port.

This command is supported when following feature are enabled HAVE_AUTHD feature

Attribute Name: enable-reauthentication

Attribute Type: empty

Netconf edit-config payload

```
<authentication xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-authentication">
  <dot1x-interfaces>
    <dot1x-interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
    <reauthentication-timer>
      <config>
        </enable-reauthentication><!-- operation="delete"-->
      </config>
    </reauthentication-timer>
  </dot1x-interface>
</dot1x-interfaces>
</authentication>
```

Command Syntax

```
dot1x reauthentication
```

Configure enable mac auth bypass

Use this attribute to enable/disable mac-auth-bypass on a port.

This command is supported when following feature are enabled HAVE_AUTHD feature

Attribute Name: enable-mac-auth-bypass

Attribute Type: enum (enable|disable)

Netconf edit-config payload

```
<authentication xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-authentication">
  <dot1x-interfaces>
    <dot1x-interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
    </dot1x-interface>
  </dot1x-interfaces>
</authentication>
```

```
<reauthentication-timer>
<config>
  <enable-mac-auth-bypass>enable</enable-mac-auth-bypass> <!--
operation="delete"-->
</config>
</reauthentication-timer>
</dot1x-interface>
</dot1x-interfaces>
</authentication>
```

Command Syntax

```
dot1x mac-auth-bypass (enable|disable)
```

Configure supplicant timeout

Use this attribute to set the interval for a supplicant to respond.

This command is supported when following feature are enabled HAVE_AUTHD feature

Attribute Name: supplicant-timeout

Attribute Type: uint16

Attribute Range: 1-65535

Netconf edit-config payload

```
<authentication xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-authentication">
<dot1x-interfaces>
<dot1x-interface>
  <name>WORD</name>
  <config>
    <name>WORD</name>
  </config>
<authenticator-be>
<config>
  <supplicant-timeout>1</supplicant-timeout> <!-- operation="delete"-->
</config>
</authenticator-be>
</dot1x-interface>
</dot1x-interfaces>
</authentication>
```

Command Syntax

```
dot1x timeout supp-timeout <1-65535>
```

Configure server timeout

Use this attribute to set the authentication server response timeout.

This command is supported when following feature are enabled HAVE_AUTHD feature

Attribute Name: server-timeout

Attribute Type: uint16

Attribute Range: 1-65535

Netconf edit-config payload

```
<authentication xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-authentication">
  <dot1x-interfaces>
    <dot1x-interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
    <authenticator-be>
      <config>
        <server-timeout>1</server-timeout> <!-- operation="delete"-->
      </config>
    </authenticator-be>
  </dot1x-interface>
</dot1x-interfaces>
</authentication>
```

Command Syntax

```
dot1x timeout server-timeout <1-65535>
```

Configure mac control

Use this attribute to enable or disable the MAC authentication control on an interface.

This command is supported when following feature are enabled MAC_AUTH feature,HAVE_AUTHD feature

Attribute Name: mac-control

Attribute Type: empty

Netconf edit-config payload

```
<authentication xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-authentication">
  <mac-interfaces>
    <mac-interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
    </mac-control>
  </mac-interface>
</mac-interfaces>
</authentication>
```

Command Syntax

```
auth-mac
```

Configure mac mode

Use this attribute to enable or disable the MAC authentication mode on an interface.

This command is supported when following feature are enabled MAC_AUTH feature,HAVE_AUTHD feature

Attribute Name: mac-mode

Attribute Type: enum (filter|shutdown)

Netconf edit-config payload

```
<authentication xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-authentication">
  <mac-interfaces>
    <mac-interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      <mac-mode>shutdown</mac-mode> <!-- operation="delete"-->
    </mac-interface>
  </mac-interfaces>
</authentication>
```

Command Syntax

```
auth-mac mode (filter|shutdown)
```

Configure dynamic vlan creation

Use this attribute to enable or disable dynamic VLAN creation after successful MAC authentication.

This command is supported when following feature are enabled MAC_AUTH feature,HAVE_AUTHD feature

Attribute Name: dynamic-vlan-creation

Attribute Type: empty

Netconf edit-config payload

```
<authentication xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-authentication">
  <mac-interfaces>
    <mac-interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      </dynamic-vlan-creation><!-- operation="delete"-->
    </mac-interface>
  </mac-interfaces>
</authentication>
```

Command Syntax

```
auth-mac dynamic-vlan-creation
```

Configure mac address aging

Use this attribute to either enable or disable MAC aging. When enabled, a MAC entry is added to the forwarding database, with aging time equal to the bridge aging time. Otherwise, the MAC entry will not be aged out. If MAC aging is disabled, the MAC entry will not be aged out

This command is supported when following feature are enabled MAC_AUTH feature,HAVE_AUTHD feature

Attribute Name: mac-address-aging

Attribute Type: empty

Netconf edit-config payload

```
<authentication xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-authentication">
  <mac-interfaces>
    <mac-interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
    </mac-interface><!-- operation="delete"-->
  </mac-interfaces>
</authentication>
```

Command Syntax

```
auth-mac mac-aging
```

Configure options

Use this attribute to turn on or turn off 802.1x debugging at various levels.

This command is supported when following feature are enabled HAVE_AUTHD feature

Attribute Name: options

Attribute Type: bits (event|timer|packet|nsm|all)

Netconf edit-config payload

```
<authentication xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-authentication">
  <debug>
    <config>
      <options>event</options> <!-- operation="delete"-->
    </config>
  </debug>
</authentication>
```

Command Syntax

```
debug dot1x (event|timer|packet|nsm|all)
```

dot1x initialize interface IFNAME

Attribute Name: name

Attribute Type: string

Attribute Range: 1-33

Netconf RPC payload

```
<dot1x-authentication-initialize-interface xmlns="http://www.ipinfusion.com/
yang/ocnos/ipi-authentication">
  <name>IFNAME</name>
</dot1x-authentication-initialize-interface>
```

Command Syntax

```
dot1x initialize interface IFNAME
```

snmp restart auth

Netconf RPC payload

```
<dot1x-authentication-snmp-restart xmlns="http://www.ipinfusion.com/yang/ocnos/
ipi-authentication"/>
```

Command Syntax

```
snmp restart auth
```

debug dot1x (event|timer|packet|nsm|all)

Attribute Name: terminal-debug-options

Attribute Type: bits (event|timer|packet|nsm|all)

Netconf RPC payload

```
<dot1x-authentication-terminal-debug-on xmlns="http://www.ipinfusion.com/yang/
ocnos/ipi-authentication">
  <terminal-debug-options>event</terminal-debug-options>
</dot1x-authentication-terminal-debug-on>
```

Command Syntax

```
debug dot1x (event|timer|packet|nsm|all)
```

no debug dot1x (event|timer|packet|nsm|all)

Attribute Name: terminal-debug-options

Attribute Type: bits (event|timer|packet|nsm|all)

Netconf RPC payload

```
<dot1x-authentication-terminal-debug-off xmlns="http://www.ipinfusion.com/yang/
ocnos/ipi-authentication">
  <terminal-debug-options>event</terminal-debug-options>
</dot1x-authentication-terminal-debug-off>
```

Command Syntax

```
no debug dot1x (event|timer|packet|nsm|all)
```

IPI-AUTHENTICATION-RADIUS

Configure port

Specify the radius client port number. The default port number is 1812.

This command is supported when following feature are enabled OpenSSL crypto library available

Attribute Name: port

Attribute Type: uint16

Attribute Range: 0-65535

Attribute Name: source-address

Attribute Type: inet:ipv4-address

Netconf edit-config payload

```
<authentication-radius xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-
authentication-radius">
  <global>
    <config>
      <source-address>A.B.C.D</source-address> <!-- operation="delete"-->
      <port>0</port> <!-- operation="delete"-->
    </config>
  </global>
</authentication-radius>
```

Command Syntax

```
ip radius source-interface A.B.C.D <0-65535>
```

Configure timeout

Use this attribute to set the global timeout which is how long the device waits for a response from a RADIUS server before declaring a timeout failure.

This command is supported when following feature are enabled OpenSSL crypto library available

Attribute Name: timeout

Attribute Type: uint8

Attribute Range: 1-60

Netconf edit-config payload

```
<authentication-radius xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-
authentication-radius">
  <global>
    <config>
      <timeout>1</timeout> <!-- operation="delete"-->
    </config>
  </global>
</authentication-radius>
```

Command Syntax

```
radius-server dot1x timeout <1-60>
```

Configure retransmit max retries

Use this attribute to specify the number of times the router transmits each radius request to the server before giving up

This command is supported when following feature are enabled OpenSSL crypto library available

Attribute Name: retransmit-max-retries

Attribute Type: uint8

Attribute Range: 1-100

Netconf edit-config payload

```
<authentication-radius xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-
authentication-radius">
  <global>
    <config>
      <retransmit-max-retries>1</retransmit-max-retries> <!-- operation="delete"-->
    </config>
  </global>
</authentication-radius>
```

Command Syntax

```
radius-server dot1x retransmit <1-100>
```

Configure key string

Use this attribute to set a global preshared key (shared secret) which is a text string shared between the device and RADIUS servers

This command is supported when following feature are enabled OpenSSL crypto library available

Attribute Name: key-string

Attribute Type: string

Attribute Range: 1-64

Netconf edit-config payload

```
<authentication-radius xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-
authentication-radius">
  <global>
    <config>
      <key-string>WORD</key-string> <!-- operation="delete"-->
    </config>
  </global>
</authentication-radius>
```

Command Syntax

```
radius-server dot1x key-string WORD
```

Configure encryption key

Use this attribute to set a global preshared key (shared secret) which is a text string shared between the device and RADIUS servers

This command is supported when following feature are enabled OpenSSL crypto library available

Attribute Name: encryption-key

Attribute Type: string

Attribute Range: 18-130

Netconf edit-config payload

```
<authentication-radius xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-
authentication-radius">
  <global>
    <config>
      <encryption-key>WORD</encryption-key> <!-- operation="delete"-->
    </config>
  </global>
</authentication-radius>
```

Command Syntax

```
radius-server dot1x key-string encrypted WORD
```

Configure host address

The host-address to configure the radius host.

This command is supported when following feature are enabled OpenSSL crypto library available

Attribute Name: host-address

Attribute Type: inet:ipv4-address

Netconf edit-config payload

```
<authentication-radius xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-
authentication-radius">
  <hosts>
    <host> <!-- operation="delete"-->
      <host-address>A.B.C.D</host-address>
    <config>
      <host-address>A.B.C.D</host-address>
    </config>
  </host>
</hosts>
</authentication-radius>
```

Command Syntax

```
radius-server dot1x host A.B.C.D
```

Configure host port

Specify the radius client port number. The default port number is 1812.

This command is supported when following feature are enabled OpenSSL crypto library available

Attribute Name: host-port

Attribute Type: uint16

Attribute Range: 0-65535

Netconf edit-config payload

```
<authentication-radius xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-
authentication-radius">
  <hosts>
    <host>
      <host-address>A.B.C.D</host-address>
      <config>
        <host-address>A.B.C.D</host-address>
      </config>
      <host-port>0</host-port> <!-- operation="delete"-->
    </host>
  </hosts>
</authentication-radius>
```

Command Syntax

```
auth-port <0-65535>
```

Configure host timeout

Use this attribute to set the timeout which is how long the device waits for a response from a RADIUS server before declaring a timeout failure.

This command is supported when following feature are enabled OpenSSL crypto library available

Attribute Name: host-timeout

Attribute Type: uint8

Attribute Range: 0-60

Netconf edit-config payload

```
<authentication-radius xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-
authentication-radius">
  <hosts>
    <host>
      <host-address>A.B.C.D</host-address>
      <config>
        <host-address>A.B.C.D</host-address>
      </config>
      <host-timeout>0</host-timeout> <!-- operation="delete"-->
    </host>
  </hosts>
</authentication-radius>
```

Command Syntax

```
timeout <0-60>
```

Configure host retransmit max retries

Use this attribute to specify the number of times the router transmits each radius request to the server before giving up.

This command is supported when following feature are enabled OpenSSL crypto library available

Attribute Name: host-retransmit-max-retries

Attribute Type: uint8

Attribute Range: 0-100

Netconf edit-config payload

```
<authentication-radius xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-
authentication-radius">
  <hosts>
    <host>
      <host-address>A.B.C.D</host-address>
      <config>
        <host-address>A.B.C.D</host-address>
      </config>
      <host-retransmit-max-retries>0</host-retransmit-max-retries> <!--
operation="delete"-->
    </host>
  </hosts>
</authentication-radius>
```

Command Syntax

```
retransmit <0-100>
```

Configure key string

Use this attribute to set a key (shared secret) which is a text string shared between the device and RADIUS servers

This command is supported when following feature are enabled OpenSSL crypto library available

Attribute Name: key-string

Attribute Type: string

Attribute Range: 1-64

Netconf edit-config payload

```
<authentication-radius xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-
authentication-radius">
  <hosts>
    <host>
      <host-address>A.B.C.D</host-address>
      <config>
        <host-address>A.B.C.D</host-address>
      </config>
      <key-string>WORD</key-string> <!-- operation="delete"-->
    </host>
  </hosts>
</authentication-radius>
```

```
</host>
</hosts>
</authentication-radius>
```

Command Syntax

```
key-string WORD
```

Configure encryption key

Use this attribute to set a key (shared secret) which is a text string shared between the device and RADIUS servers

This command is supported when following feature are enabled OpenSSL crypto library available

Attribute Name: encryption-key

Attribute Type: string

Attribute Range: 18-130

Netconf edit-config payload

```
<authentication-radius xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-
authentication-radius">
  <hosts>
    <host>
      <host-address>A.B.C.D</host-address>
      <config>
        <host-address>A.B.C.D</host-address>
      </config>
      <encryption-key>WORD</encryption-key> <!-- operation="delete"-->
    </host>
  </hosts>
</authentication-radius>
```

Command Syntax

```
key-string encrypted WORD
```

IPI-ACL

Configure type

Type indicates the fields allowed in the ACL entries belonging to the ACL set (e.g., ip, ipv6, etc.)

Attribute Name: type

Attribute Type: enum (mac|ip|ipv6|arp)

Netconf edit-config payload

```
<acl xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-acl">
  <acl-sets>
    <acl-set> <!-- operation="delete"-->
      <type>ip</type>
```

```
<config>
  <type>ip</type>
  <name>WORD</name>
</config>
<name>NAME</name>
</acl-set>
</acl-sets>
</acl>
```

Command Syntax

```
ip access-list NAME
```

Configure type

Type indicates the fields allowed in the ACL entries belonging to the ACL set (e.g., ip, ipv6, etc.)

Attribute Name: type

Attribute Type: enum (mac|ip|ipv6|arp)

Netconf edit-config payload

```
<acl xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-acl">
  <acl-sets>
    <acl-set> <!-- operation="delete"-->
      <type>ipv6</type>
      <config>
        <type>ipv6</type>
        <name>WORD</name>
      </config>
      <name>NAME</name>
    </acl-set>
  </acl-sets>
</acl>
```

Command Syntax

```
ipv6 access-list NAME
```

Configure type

Type indicates the fields allowed in the ACL entries belonging to the ACL set (e.g., ip, ipv6, etc.)

Attribute Name: type

Attribute Type: enum (mac|ip|ipv6|arp)

Netconf edit-config payload

```
<acl xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-acl">
  <acl-sets>
    <acl-set> <!-- operation="delete"-->
      <type>mac</type>
      <config>
        <type>mac</type>
      </config>
    </acl-set>
  </acl-sets>
</acl>
```

```
        <name>WORD</name>
    </config>
    <name>NAME</name>
</acl-set>
</acl-sets>
</acl>
```

Command Syntax

```
mac access-list NAME
```

Configure type

Type indicates the fields allowed in the ACL entries belonging to the ACL set (e.g., ip, ipv6, etc.)

Attribute Name: type

Attribute Type: enum (mac|ip|ipv6|arp)

Netconf edit-config payload

```
<acl xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-acl">
  <acl-sets>
    <acl-set <!-- operation="delete"-->
      <type>arp</type>
      <config>
        <type>arp</type>
        <name>WORD</name>
      </config>
      <name>NAME</name>
    </acl-set>
  </acl-sets>
</acl>
```

Command Syntax

```
arp access-list NAME
```

Configure description

Description, or comment, for the ACL set

Attribute Name: description

Attribute Type: string

Attribute Range: 1-100

Netconf edit-config payload

```
<acl xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-acl">
  <acl-sets>
    <acl-set>
      <type>mac</type>
      <config>
        <type>mac</type>
```

```

    <name>WORD</name>
  </config>
  <name>NAME</name>
  <description>LINE</description> <!-- operation="delete"-->
</acl-set>
</acl-sets>
</acl>

```

Command Syntax

```
remark LINE
```

Configure ipv6 disable default icmpv6 rule

Use this attribute to inform that the default icmpv6 rule is disable for the IPv6 ACL.

Attribute Name: ipv6-disable-default-icmpv6-rule

Attribute Type: uint8

Netconf edit-config payload

```

<acl xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-acl">
  <acl-sets>
  <acl-set>
    <type>mac</type>
    <config>
      <type>mac</type>
      <name>WORD</name>
    </config>
    <name>NAME</name>
    </ipv6-disable-default-icmpv6-rule><!-- operation="delete"-->
  </acl-set>
</acl-sets>
</acl>

```

Command Syntax

```
no 268435453 permit icmpv6 any any
```

Configure ipv6 disable default icmpv6 rule

Use this attribute to inform that the default icmpv6 rule is disable for the IPv6 ACL.

Attribute Name: ipv6-disable-default-icmpv6-rule

Attribute Type: uint8

Netconf edit-config payload

```

<acl xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-acl">
  <acl-sets>
  <acl-set>
    <type>mac</type>
    <config>
      <type>mac</type>

```

```

        <name>WORD</name>
    </config>
    <name>NAME</name>
    </ipv6-disable-default-icmpv6-rule><!-- operation="delete"-->
</acl-set>
</acl-sets>
</acl>

```

Command Syntax

```
no 268435453
```

Configure starting sequence number

Use this attribute to set starting sequence number for resequencing

Attribute Name: starting-sequence-number

Attribute Type: uint32

Attribute Range: 1-268435453

Attribute Name: increment-steps

Attribute Type: uint32

Attribute Range: 1-268435453

Netconf edit-config payload

```

<acl xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-acl">
  <acl-sets>
    <acl-set>
      <type>mac</type>
      <config>
        <type>mac</type>
        <name>WORD</name>
      </config>
      <name>NAME</name>
    </acl-set>
  </acl-sets>
  <re-sequence>
    <config>
      <increment-steps>1</increment-steps> <!-- operation="delete"-->
      <starting-sequence-number>1</starting-sequence-number> <!--
operation="delete"-->
    </config>
  </re-sequence>
</acl>

```

Command Syntax

```
resequence <1-268435453> <1-268435453>
```

Configure forwarding action default

Use this attribute to set default forwarding action

Attribute Name: forwarding-action-default

Attribute Type: enum (deny-all|permit-all)

Attribute Name: monitor-action-default

Attribute Type: enum (log|sample)

Netconf edit-config payload

```
<acl xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-acl">
  <acl-sets>
    <acl-set>
      <type>mac</type>
      <config>
        <type>mac</type>

```

(<1-268435453>|) (deny|permit) icmp (any) (any) <0-255> fragments (vlan <1-4094>|)
(inner-vlan <1-4094>|) ((log|sample)|) (redirect-to-port IFNAME|)

```

Configure redirect interface name

Use this attribute to set the interface name on which packet to be redirected (in-direction only)

Attribute Name: redirect-interface-name

Attribute Type: string

Attribute Name: forwarding-action

Attribute Type: enum (deny|permit)

Attribute Name: protocol-icmp

Attribute Type: empty

Attribute Name: source-address

Attribute Type: enum (any)

Attribute Name: destination-address

Attribute Type: enum (any)

Attribute Name: icmp-type

Attribute Type: uint8

Attribute Range: 0-255

Attribute Name: fragments

Attribute Type: empty

Attribute Name: dscp

Attribute Type: enum

(default|cs1|af11|af12|af13|cs2|af21|af22|af23|cs3|af31|af32|af33|cs4|af41|af42|af43|cs5|ef|cs6|cs7)

Attribute Name: vlan-id

Attribute Type: uint16

Attribute Range: 1-4094

Attribute Name: inner-vlan-id

Attribute Type: uint16

Attribute Range: 1-4094

Attribute Name: monitor-action

Attribute Type: enum (log|sample)

```

Command Syntax

```
clear arp access-list NAME counters
```

IPI-DHCP-SNOOPING

Configure options

Use this attribute to debug the DHCP snooping feature.

Attribute Name: options

Attribute Type: bits (event|rx|tx|packet|all)

Netconf edit-config payload

```
<dhcp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dhcp">
  <snooping>
    <debug>
      <config>
        <options>event</options> <!-- operation="delete"-->
```

```
</config>
</debug>
</snooping>
</dhcp>
```

Command Syntax

```
debug ip dhcp snooping (event|rx|tx|packet|all)
```

Configure snooping enable

Enable DHCP snooping feature

Attribute Name: snooping-enable

Attribute Type: empty

Netconf edit-config payload

```
<dhcp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dhcp">
  <snooping>
    <snooping-bridges>
      <snooping-bridge>
        <bridge-id>1</bridge-id>
        <config>
          <bridge-id>1</bridge-id>
        </config>
      </snooping-bridge>
    </snooping-bridges>
  </snooping>
</dhcp>
```

Command Syntax

```
ip dhcp snooping bridge <1-32>
```

Configure verify mac address

Use this command to enable MAC address verification.

Attribute Name: verify-mac-address

Attribute Type: empty

Netconf edit-config payload

```
<dhcp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dhcp">
  <snooping>
    <snooping-bridges>
      <snooping-bridge>
        <bridge-id>1</bridge-id>
        <config>
          <bridge-id>1</bridge-id>
          <verify-mac-address><!-- operation="delete"-->
        </config>
      </snooping-bridge>
    </snooping-bridges>
  </snooping>
</dhcp>
```

```
</snooping-bridge>
</snooping-bridges>
</snooping>
</dhcp>
```

Command Syntax

```
ip dhcp snooping verify mac-address bridge <1-32>
```

Configure option 82 enable

Use this command to insert interface and VLAN name in the option 82 field in DHCP packets.

Attribute Name: option-82-enable

Attribute Type: empty

Netconf edit-config payload

```
<dhcp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dhcp">
  <snooping>
    <snooping-bridges>
      <snooping-bridge>
        <bridge-id>1</bridge-id>
        <config>
          <bridge-id>1</bridge-id>
        </config>
        </option-82-enable><!-- operation="delete"-->
      </snooping-bridge>
    </snooping-bridges>
  </snooping>
</dhcp>
```

Command Syntax

```
ip dhcp snooping information option bridge <1-32>
```

Configure write delay

Configure DHCP snooping database write delay in multiples of 10 seconds

Attribute Name: write-delay

Attribute Type: uint32

Default Value: 300

Attribute Range: 20-86400

Netconf edit-config payload

```
<dhcp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dhcp">
  <snooping>
    <snooping-bridges>
      <snooping-bridge>
        <bridge-id>1</bridge-id>
        <config>
```

```

    <bridge-id>1</bridge-id>
  </config>
  <write-delay>20</write-delay> <!-- operation="delete"-->
</snooping-bridge>
</snooping-bridges>
</snooping>
</dhcp>

```

Command Syntax

```
ip dhcp snooping database write-delay <20-86400> bridge <1-32>
```

Configure strict validation

Use this command to enable strict validation of DHCP packets.

Attribute Name: strict-validation

Attribute Type: empty

Netconf edit-config payload

```

<dhcp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dhcp">
  <snooping>
    <snooping-bridges>
      <snooping-bridge>
        <bridge-id>1</bridge-id>
        <config>
          <bridge-id>1</bridge-id>
        </config>
      </strict-validation><!-- operation="delete"-->
    </snooping-bridge>
  </snooping-bridges>
</snooping>
</dhcp>

```

Command Syntax

```
ip dhcp packet strict-validation bridge <1-32>
```

Configure vlan range

Use this command to enable DHCP snooping for the given VLAN.

Attribute Name: vlan-range

Attribute Type: string

Attribute Range: 2-4094

Netconf edit-config payload

```

<dhcp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dhcp">
  <snooping>
    <snooping-bridges>
      <snooping-bridge>

```

```
<bridge-id>1</bridge-id>
<config>
  <bridge-id>1</bridge-id>
</config>
  <vlan-range>VLAN_RANGE</vlan-range> <!-- operation="delete"-->
</snooping-bridge>
</snooping-bridges>
</snooping>
</dhcp>
```

Command Syntax

```
ip dhcp snooping vlan VLAN_RANGE bridge <1-32>
```

Configure enable

Use this command to enable/disable arp-inspection on the bridge.

Attribute Name: enable

Attribute Type: empty

Netconf edit-config payload

```
<dhcp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dhcp">
  <snooping>
    <snooping-bridges>
      <snooping-bridge>
        <bridge-id>1</bridge-id>
        <config>
          <bridge-id>1</bridge-id>
        </config>
        <arp-inspection>
          <config>
            </enable>
          </config>
        </arp-inspection>
      </snooping-bridge>
    </snooping-bridges>
  </snooping>
</dhcp>
```

Command Syntax

```
ip dhcp snooping arp-inspection bridge <1-32>
```

Configure validate

Use this command to enable validation of the source-mac, destination-mac, or IP address field in the ARP packet payload.

Attribute Name: validate

Attribute Type: enum (src-mac|dst-mac|ip)

Netconf edit-config payload

```
<dhcp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dhcp">
  <snooping>
    <snooping-bridges>
      <snooping-bridge>
        <bridge-id>1</bridge-id>
        <config>
          <bridge-id>1</bridge-id>
        </config>
      <arp-inspection>
        <config>
          <validate>src-mac</validate> <!-- operation="delete"-->
        </config>
      </arp-inspection>
    </snooping-bridge>
  </snooping-bridges>
</snooping>
</dhcp>
```

Command Syntax

```
ip dhcp snooping arp-inspection validate (src-mac|dst-mac|ip) bridge <1-32>
```

Configure vlan range

Use this command to enable ARP inspection on the VLAN in a bridge.

Attribute Name: vlan-range

Attribute Type: string

Attribute Range: 2-4094

Netconf edit-config payload

```
<dhcp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dhcp">
  <snooping>
    <snooping-bridges>
      <snooping-bridge>
        <bridge-id>1</bridge-id>
        <config>
          <bridge-id>1</bridge-id>
          </config>
          <arp-inspection>
            <config>
              <vlan-range>VLAN_RANGE</vlan-range> <!-- operation="delete"-->
            </config>
          </arp-inspection>
        </snooping-bridge>
      </snooping-bridges>
    </snooping>
  </dhcp>
```

Command Syntax

```
ip dhcp snooping arp-inspection vlan VLAN_RANGE bridge <1-32>
```

Configure if name

Use this attribute to set the interface name

Attribute Name: if-name

Attribute Type: string

Attribute Name: ipv4-address

Attribute Type: inet:ipv4-address

Netconf edit-config payload

```
<dhcp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dhcp">
  <snooping>
    <snooping-bridges>
      <snooping-bridge>
        <bridge-id>1</bridge-id>
        <config>
          <bridge-id>1</bridge-id>
        </config>
        <vlans>
          <vlan>
            <vlan-id>1</vlan-id>
            <config>
              <vlan-id>1</vlan-id>
            </config>
            <mac-addresses-ipv4>
              <mac-address-ipv4>
                <mac-address>XXXX.XXXX.XXXX</mac-address>
                <config>
                  <mac-address>XXXX.XXXX.XXXX</mac-address>
                  <ipv4-address>A.B.C.D</ipv4-address>
                </config>
              <if-name>IFNAME</if-name>
            </mac-address-ipv4>
          </mac-addresses-ipv4>
        </vlan>
      </vlans>
    </snooping-bridge>
  </snooping-bridges>
</snooping>
</dhcp>
```

Command Syntax

```
ip dhcp snooping binding bridge <1-32> XXXX.XXXX.XXXX <1-4094> ipv4 A.B.C.D IFNAME
```

Configure if name

Use this attribute to set the interface name

This command is supported when following feature are enabled HAVE_IPV6 feature enabled

Attribute Name: if-name

Attribute Type: string

Attribute Name: ipv6-address

Attribute Type: inet:ipv6-address

Netconf edit-config payload

```
<dhcp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dhcp">
  <snooping>
    <snooping-bridges>
      <snooping-bridge>
        <bridge-id>1</bridge-id>
        <config>
          <bridge-id>1</bridge-id>

ip dhcp snooping source database bridge WORD
```

renew ip dhcp snooping source binding database bridge WORD

Attribute Name: bridge-id

Attribute Type: string

Netconf RPC payload

```
<ipi-dhcp-snooping_dhcp-snooping-renew-source-database xmlns="http://  
www.ipinfusion.com/yang/ocnos/ipi-dhcp">  
  <bridge-id>WORD</bridge-id>  
</ipi-dhcp-snooping_dhcp-snooping-renew-source-database>
```

Command Syntax

```
renew ip dhcp snooping source binding database bridge WORD
```

clear ip dhcp snooping source binding bridge WORD

Attribute Name: bridge-id

Attribute Type: string

Netconf RPC payload

```
<ipi-dhcp-snooping_dhcp-snooping-clear-source-binding-database xmlns="http://  
www.ipinfusion.com/yang/ocnos/ipi-dhcp">  
  <bridge-id>WORD</bridge-id>  
</ipi-dhcp-snooping_dhcp-snooping-clear-source-binding-database>
```

Command Syntax

```
clear ip dhcp snooping source binding bridge WORD
```

clear ip dhcp snooping binding bridge WORD

Attribute Name: bridge-id

Attribute Type: string

Netconf RPC payload

```
<ipi-dhcp-snooping_dhcp-snooping-clear-database xmlns="http://  
www.ipinfusion.com/yang/ocnos/ipi-dhcp">  
  <bridge-id>WORD</bridge-id>  
</ipi-dhcp-snooping_dhcp-snooping-clear-database>
```

Command Syntax

```
clear ip dhcp snooping binding bridge WORD
```

debug ip dhcp snooping (event|rx|tx|packet|all)

Attribute Name: terminal-debug-options

Attribute Type: bits (event|rx|tx|packet|all)

Netconf RPC payload

```
<ipi-dhcp-snooping_dhcp-snooping-terminal-debug-on xmlns="http://  
www.ipinfusion.com/yang/ocnos/ipi-dhcp">  
  <terminal-debug-options>event</terminal-debug-options>  
</ipi-dhcp-snooping_dhcp-snooping-terminal-debug-on>
```

Command Syntax

```
debug ip dhcp snooping (event|rx|tx|packet|all)
```

no debug ip dhcp snooping (event|rx|tx|packet|all)

Attribute Name: terminal-debug-options

Attribute Type: bits (event|rx|tx|packet|all)

Netconf RPC payload

```
<ipi-dhcp-snooping_dhcp-snooping-terminal-debug-off xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dhcp">
  <terminal-debug-options>event</terminal-debug-options>
</ipi-dhcp-snooping_dhcp-snooping-terminal-debug-off>
```

Command Syntax

```
no debug ip dhcp snooping (event|rx|tx|packet|all)
```

IPI-DHCP-SNOOPING-INTERFACE

Configure snooping trust

Use this command to enable the snooping trust on the interface level.

Attribute Name: snooping-trust

Attribute Type: empty

Netconf edit-config payload

```
<dhcp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dhcp">
  <snooping>
    <interfaces>
      <interface>
        <name>WORD</name>
        <config>
          <name>WORD</name>
          </config>
          <trust>
            <config>
              </snooping-trust><!-- operation="delete"-->
            </config>
          </trust>
        </interface>
      </interfaces>
    </snooping>
  </dhcp>
```

Command Syntax

```
ip dhcp snooping trust
```

Configure verify snooping vlan

Use this command to enable the IPSG feature at the interface level.

Attribute Name: verify-snooping-vlan

Attribute Type: empty

Netconf edit-config payload

```
<dhcp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dhcp">
  <snooping>
    <interfaces>
      <interface>
        <name>WORD</name>
        <config>
          <name>WORD</name>
        </config>
        <verify>
          <config>
            </verify-snooping-vlan>
          </config>
        </verify>
      </interface>
    </interfaces>
  </snooping>
</dhcp>
```

Command Syntax

```
ip verify source dhcp-snooping-vlan
```

Configure verify access group mode

Use this command to enable the snooping access-group on the interface level.

Attribute Name: verify-access-group-mode

Attribute Type: empty

Netconf edit-config payload

```
<dhcp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dhcp">
  <snooping>
    <interfaces>
      <interface>
        <name>WORD</name>
        <config>
          <name>WORD</name>
        </config>
        <verify>
          <config>
            </verify-access-group-mode><!-- operation="delete"-->
          </config>
        </verify>
      </interface>
    </interfaces>
  </snooping>
</dhcp>
```

Command Syntax

```
ip verify source access-group mode merge
```

clear hsl ipc-stat VALUE VALUE

Attribute Name: start-value

Attribute Type: uint16

Attribute Name: end-value

Attribute Type: uint16

Netconf RPC payload

```
<platform-clear-hsl-ipc-stat-values xmlns="http://www.ipinfusion.com/yang/ocnos/
ipi-ras">
  <start-value>VALUE</start-value>
  <end-value>VALUE</end-value>
</platform-clear-hsl-ipc-stat-values>
```

Command Syntax

```
clear hsl ipc-stat VALUE VALUE
```

clear hsl ipc-stat

Netconf RPC payload

```
<platform-clear-hsl-ipc-stat xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-
ras"/>
```

Command Syntax

```
clear hsl ipc-stat
```

clear hsl mlag mac-sync-count

Netconf RPC payload

```
<platform-clear-hsl-mlag-mac-sync xmlns="http://www.ipinfusion.com/yang/ocnos/
ipi-ras"/>
```

Command Syntax

```
clear hsl mlag mac-sync-count
```

clear hardware-discard-counters

Netconf RPC payload

```
<platform-clear-hardware-discard-counters xmlns="http://www.ipinfusion.com/yang/
ocnos/ipi-ras"/>
```

Command Syntax

```
clear hardware-discard-counters
```

clear hsl fdb debug-counters

Netconf RPC payload

```
<platform-clear-hsl-fdb-debug-counters xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ras"/>
```

Command Syntax

```
clear hsl fdb debug-counters
```

IPI-UNICAST-RPF

Configure enable route lookup

Use this attribute to enable uRPF globally on the system

This command is supported when following feature are enabled Unicast Reverse Path Forwarding feature

Attribute Name: enable-route-lookup

Attribute Type: empty

Netconf edit-config payload

```
<unicast-rpf xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-unicast-rpf">
  <global>
    <config>
      </enable-route-lookup><!-- operation="delete"-->
    </config>
  </global>
</unicast-rpf>
```

Command Syntax

```
ip urpf enable
```

Configure source reachability mode

Use this attribute to enable uRPF for an interface with specified reachability mode

Attribute Name: source-reachability-mode

Attribute Type: enum (any|rx|any allow-default)

Netconf edit-config payload

```
<unicast-rpf xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-unicast-rpf">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
    </interface>
  </interfaces>
</unicast-rpf>
```

```
<source-reachability-mode>any</source-reachability-mode> <!--
operation="delete"-->
</interface>
</interfaces>
</unicast-rpf>
```

Command Syntax

```
ip verify unicast source reachable-via (any|rx|any allow-default)
```

IPI-OSPF-INTERFACE-TRACKING

Configure event name

Attribute used to specify the event-name for OSPF interface tracking.

Attribute Name: event-name

Attribute Type: string

Attribute Name: event-match-criteria

Attribute Type: enum (all|any)

Netconf edit-config payload

```
<ospf-interfaces-events-tracking xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-
ospf-interface-tracking">
  <ospf-interface-events-tracking> <!-- operation="delete"-->
    <event-name>NAME</event-name>
    <config>
      <event-name>NAME</event-name>
      <event-match-criteria>all</event-match-criteria>
    </config>
  </ospf-interface-events-tracking>
</ospf-interfaces-events-tracking>
```

Command Syntax

```
if-event-track ospf event NAME match (all|any)
```

Configure event neighbor ip address

Attribute used to specify the event neighbor IP address for OSPF interface tracking event.

Attribute Name: event-neighbor-ip-address

Attribute Type: inet:ipv4-address

Netconf edit-config payload

```
<ospf-interfaces-events-tracking xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-
ospf-interface-tracking">
  <ospf-interface-events-tracking>
    <event-name>NAME</event-name>
    <config>
```

```

        <event-name>NAME</event-name>
    </config>
    <event-neighbor-ip-address>A.B.C.D</event-neighbor-ip-address> <!--
operation="delete"-->
</ospf-interface-events-tracking>
</ospf-interfaces-events-tracking>

```

Command Syntax

```
event nbr A.B.C.D down
```

Configure name

Attribute used to specify the interface name for OSPF interface tracking event action.

Attribute Name: name

Attribute Type: string

Attribute Name: cost

Attribute Type: uint32

Attribute Range: 1-65535

Netconf edit-config payload

```

<ospf-interfaces-events-tracking xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-
ospf-interface-tracking">
  <ospf-interface-events-tracking>
    <event-name>NAME</event-name>
  <config>
    <event-name>NAME</event-name>
  </config>
</actions>
</interfaces>
<interface> <!-- operation="delete"-->
  <name>IFNAME</name>
  <config>
    <name>IFNAME</name>
    <cost>1</cost>
  </config>
</interface>
</interfaces>
</actions>
</ospf-interface-events-tracking>
</ospf-interfaces-events-tracking>

```

Command Syntax

```
action interface IFNAME cost <1-65535>
```

IPI-PORT-MIRROR

Configure id

Port mirror session index

Attribute Name: id

Attribute Type: uint32

Attribute Range: 1-18

Attribute Name: type

Attribute Type: enum (local|remote)

Netconf edit-config payload

```
<port-mirror xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-port-mirror">
  <sessions>
    <session> <!-- operation="delete"-->
      <id>1</id>
      <config>
        <id>1</id>
        <type>local</type>
      </config>
    </session>
  </sessions>
</port-mirror>
```

Command Syntax

```
monitor session <1-18> (type (local|remote)|)
```

Configure enabled

Use this attribute to shut/unshut a port-mirror session

Attribute Name: enabled

Attribute Type: uint8

Netconf edit-config payload

```
<port-mirror xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-port-mirror">
  <sessions>
    <session>
      <id>1</id>
      <config>
        <id>1</id>
      </config>
      </enabled><!-- operation="delete"-->
    </session>
  </sessions>
</port-mirror>
```

Command Syntax

no shut

Configure enabled

Use this attribute to shut/unshut a port-mirror session

Attribute Name: enabled

Attribute Type: uint8

Netconf edit-config payload

```
<port-mirror xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-port-mirror">
  <sessions>
    <session>
      <id>1</id>
      <config>
        <id>1</id>
      </config>
      </enabled><!-- operation="delete"-->
    </session>
  </sessions>
</port-mirror>
```

Command Syntax

no monitor session <1-18> shut

Configure description

Use this attribute to add a description to port-mirror session

This command is supported when following feature are enabled advance mirror feature

Attribute Name: description

Attribute Type: string

Attribute Range: 1-32

Netconf edit-config payload

```
<port-mirror xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-port-mirror">
  <sessions>
    <session>
      <id>1</id>
      <config>
        <id>1</id>
      </config>
      <description>LINE</description> <!-- operation="delete"-->
    </session>
  </sessions>
</port-mirror>
```

Command Syntax

description LINE

Configure source vlan

use this attribute to configure source-vlan

This command is supported when following feature are enabled advance mirror feature

Attribute Name: source-vlan

Attribute Type: string

Attribute Range: 2-4094

Netconf edit-config payload

```
<port-mirror xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-port-mirror">
  <sessions>
    <session>
      <id>1</id>
      <config>
        <id>1</id>
      </config>
      <source-vlan>VLAN_RANGE</source-vlan> <!-- operation="delete"-->
    </session>
  </sessions>
</port-mirror>
```

Command Syntax

source vlan VLAN_RANGE

Configure interface name

Use this attribute to configure port mirror local interface

This command is supported when following feature are enabled advance mirror feature

Attribute Name: interface-name

Attribute Type: string

Netconf edit-config payload

```
<port-mirror xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-port-mirror">
  <sessions>
    <session>
      <id>1</id>
      <config>
        <id>1</id>
      </config>
    <destination>
      <local>
        <config>
          <interface-name>IFNAME</interface-name> <!-- operation="delete"-->
        </config>
      </local>
    </destination>
  </sessions>
</port-mirror>
```

```

</config>
</local>
</destination>
</session>
</sessions>
</port-mirror>

```

Command Syntax

```
destination interface IFNAME
```

Configure reflector interface name

Use this attribute to configure port mirror remote reflector interface

This command is supported when following feature are enabled advance mirror feature

Attribute Name: reflector-interface-name

Attribute Type: string

Attribute Name: vlan-id

Attribute Type: uint16

Attribute Range: 2-4094

Netconf edit-config payload

```

<port-mirror xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-port-mirror">
  <sessions>
    <session>
      <id>1</id>
      <config>
        <id>1</id>
      </config>
    </session>
  </sessions>
  <destination>
    <remote>
      <config>
        <vlan-id>2</vlan-id>
        <reflector-interface-name>IFNAME</reflector-interface-name>
      </config>
    </remote>
  </destination>
</port-mirror>

```

Command Syntax

```
destination remote vlan <2-4094> reflector-port IFNAME
```

Configure direction

Source interface direction

This command is supported when following feature are enabled advance mirror feature

Attribute Name: direction

Attribute Type: enum (rx|tx|both)

Netconf edit-config payload

```
<port-mirror xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-port-mirror">
  <sessions>
    <session>
      <id>1</id>
      <config>
        <id>1</id>
      </config>
      <source-interfaces>
        <source-interface>
          <name>IFNAME</name>
          <config>
            <name>IFNAME</name>
            <direction>both</direction>
          </config>
        </source-interface>
      </source-interfaces>
    </session>
  </sessions>
</port-mirror>
```

Command Syntax

```
source interface IFNAME ((rx|tx|both)|)
```

IPI-RIPNG

Configure options

This attribute enables debugging for RIPng

Attribute Name: options

Attribute Type: bits (all|events|packet send|packet recv|packet|packet detail|nsm|rib)

Netconf edit-config payload

```
<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
  <debug>
    <config>
      <options>all</options> <!-- operation="delete"-->
    </config>
  </debug>
</ripng>
```

Command Syntax

```
debug ipv6 rip (all|events|packet send|packet recv|packet|packet detail|nsm|rib|)
```

Configure split horizon

Use this attribute to perform the split-horizon action on the interface. Deleting this attribute would set the split-horizon to poisoned reverse which is the default value.

Attribute Name: split-horizon

Attribute Type: boolean

Netconf edit-config payload

```
<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      <split-horizon>true</split-horizon> <!-- operation="delete"-->
    </interface>
  </interfaces>
</ripng>
```

Command Syntax

```
ipv6 rip split-horizon
```

Configure split horizon

Use this attribute to perform the split-horizon action on the interface. Deleting this attribute would set the split-horizon to poisoned reverse which is the default value.

Attribute Name: split-horizon

Attribute Type: boolean

Netconf edit-config payload

```
<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      <split-horizon>true</split-horizon> <!-- operation="delete"-->
    </interface>
  </interfaces>
</ripng>
```

Command Syntax

```
no ipv6 rip split-horizon
```

Configure enabled

Use this attribute to perform the router rip action on the interface

Attribute Name: enabled

Attribute Type: empty

Netconf edit-config payload

```
<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      </enabled><!-- operation="delete"-->
    </interface>
  </interfaces>
</ripng>
```

Command Syntax

```
ipv6 router rip
```

Configure metric offset

Use this attribute to perform the metric-offset action on the interface

Attribute Name: metric-offset

Attribute Type: uint8

Attribute Range: 1-16

Netconf edit-config payload

```
<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      <metric-offset>1</metric-offset> <!-- operation="delete"-->
    </interface>
  </interfaces>
</ripng>
```

Command Syntax

```
ipv6 rip metric-offset <1-16>
```

Configure ripng enabled

Use this attribute to enable the router instance

Attribute Name: ripng-enabled

Attribute Type: uint8

Netconf edit-config payload

```
<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
  <instance>
    <config>
      </ripng-enabled>
    </config>
  </instance>
</ripng>
```

Command Syntax

```
router ipv6 rip
```

Configure enable cisco metric behavior

Use this attribute to enable the metric update consistent with Cisco

Attribute Name: enable-cisco-metric-behavior

Attribute Type: boolean

Netconf edit-config payload

```
<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
  <instance>
    <config>
      <enable-cisco-metric-behavior>true</enable-cisco-metric-behavior> <!--
operation="delete"-->
    </config>
  </instance>
</ripng>
```

Command Syntax

```
cisco-metric-behavior enable
```

Configure enable cisco metric behavior

Use this attribute to enable the metric update consistent with Cisco

Attribute Name: enable-cisco-metric-behavior

Attribute Type: boolean

Netconf edit-config payload

```
<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
  <instance>
    <config>
```

```
<enable-cisco-metric-behavior>true</enable-cisco-metric-behavior> <!--
operation="delete"-->
</config>
</instance>
</ripng>
```

Command Syntax

```
cisco-metric-behavior disable
```

Configure passive interfaces

Use this attribute to block RIP broadcast on the interface

Attribute Name: passive-interfaces

Attribute Type: string

Netconf edit-config payload

```
<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
<instance>
<config>
  <passive-interfaces>IFNAME</passive-interfaces> <!-- operation="delete"-->
</config>
</instance>
</ripng>
```

Command Syntax

```
passive-interface IFNAME
```

Configure distance

Use this attribute to set the administrative distance. The administrative distance is a feature used by the routers to select the path when there are two or more different routes to the same destination from two different routing protocols. A smaller administrative distance indicating a more reliable protocol

Attribute Name: distance

Attribute Type: uint8

Default Value: 120

Attribute Range: 1-255

Netconf edit-config payload

```
<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
<instance>
<config>
  <distance>1</distance> <!-- operation="delete"-->
</config>
</instance>
</ripng>
```

Command Syntax

distance <1-255>

Configure static routes

Use this attribute to configure static RIP routes

Attribute Name: static-routes

Attribute Type: string

Netconf edit-config payload

```
<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
  <instance>
    <config>
      <static-routes>X:X::X:X/M</static-routes> <!-- operation="delete"-->
    </config>
  </instance>
</ripng>
```

Command Syntax

route X:X::X:X/M

Configure aggregate prefixes

Use this attribute to configure aggregate prefixes

Attribute Name: aggregate-prefixes

Attribute Type: string

Netconf edit-config payload

```
<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
  <instance>
    <config>
      <aggregate-prefixes>X:X::X:X/M</aggregate-prefixes> <!-- operation="delete"-->
    </config>
  </instance>
</ripng>
```

Command Syntax

aggregate-address X:X::X:X/M

Configure default metric

Use this attribute to specify the metrics to be assigned to redistributed routers

Attribute Name: default-metric

Attribute Type: uint8

Default Value: 1

Attribute Range: 1-15

Netconf edit-config payload

```
<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
  <instance>
    <config>
      <default-metric>1</default-metric> <!-- operation="delete"-->
    </config>
  </instance>
</ripng>
```

Command Syntax

```
default-metric <1-15>
```

Configure originate default route

Use this attribute to add default routes to the RIP updates

Attribute Name: originate-default-route

Attribute Type: empty

Netconf edit-config payload

```
<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
  <instance>
    <config>
      </originate-default-route><!-- operation="delete"-->
    </config>
  </instance>
</ripng>
```

Command Syntax

```
default-information originate
```

Configure receive buffer size

Use this attribute to run-time configure the RIP UDP receive-buffer size

Attribute Name: receive-buffer-size

Attribute Type: uint32

Default Value: 8192

Attribute Range: 8192-2147483647

Netconf edit-config payload

```
<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
  <instance>
    <config>
      <receive-buffer-size>8192</receive-buffer-size> <!-- operation="delete"-->
    </config>
  </instance>
</ripng>
```

Command Syntax

```
recv-buffer-size <8192-2147483647>
```

Configure route type

Use this attribute to redistribute information from other routing protocols

Attribute Name: route-type

Attribute Type: enum (kernel|connected|static|ospf6|isis|bgp)

Netconf edit-config payload

```
<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
  <instance>
    <redistribute-policies>
      <redistribute-policy> <!-- operation="delete"-->
        <route-type>kernel</route-type>
      <config>
        <route-type>kernel</route-type>
      </config>
    </redistribute-policy>
  </redistribute-policies>
</instance>
</ripng>
```

Command Syntax

```
redistribute (kernel|connected|static|ospf6|isis|bgp)
```

Configure route map

Use this attribute to redistribute route-map from other routing protocols

Attribute Name: route-map

Attribute Type: string

Attribute Name: metric

Attribute Type: uint8

Attribute Range: 0-16

Netconf edit-config payload

```
<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
  <instance>
    <redistribute-policies>
      <redistribute-policy>
        <route-type>kernel</route-type>
      <config>
        <route-type>kernel</route-type>
        <metric>0</metric>
      </config>
    <route-map>WORD</route-map>
  </instance>
</ripng>
```

```
</redistribute-policy>
</redistribute-policies>
</instance>
</ripng>
```

Command Syntax

```
redistribute (kernel|connected|static|ospf6|isis|bgp) metric <0-16> route-map WORD
```

Configure metric

Use this attribute to redistribute metric information from other routing protocols

Attribute Name: metric

Attribute Type: uint8

Attribute Range: 0-16

Netconf edit-config payload

```
<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
  <instance>
    <redistribute-policies>
      <redistribute-policy>
        <route-type>kernel</route-type>
        <config>
          <route-type>kernel</route-type>
        </config>
        <metric>0</metric>
      </redistribute-policy>
    </redistribute-policies>
  </instance>
</ripng>
```

Command Syntax

```
redistribute (kernel|connected|static|ospf6|isis|bgp) metric <0-16>
```

Configure route map

Use this attribute to redistribute route-map from other routing protocols

Attribute Name: route-map

Attribute Type: string

Netconf edit-config payload

```
<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
  <instance>
    <redistribute-policies>
      <redistribute-policy>
        <route-type>kernel</route-type>
        <config>
          <route-type>kernel</route-type>
        </config>
      </redistribute-policy>
    </redistribute-policies>
  </instance>
</ripng>
```

```

    </config>
    <route-map>WORD</route-map>
</redistribute-policy>
</redistribute-policies>
</instance>
</ripng>

```

Command Syntax

```
redistribute (kernel|connected|static|ospf6|isis|bgp) route-map WORD
```

Configure route table update interval

Use this attribute to adjust basic routing protocol update timer interval

Attribute Name: route-table-update-interval

Attribute Type: uint32

Attribute Range: 5-2147483647

Attribute Name: route-info-timeout-interval

Attribute Type: uint32

Attribute Range: 5-2147483647

Attribute Name: garbage-collection-interval

Attribute Type: uint32

Attribute Range: 5-2147483647

Netconf edit-config payload

```

<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
  <instance>
    <timers>
      <config>
        <route-info-timeout-interval>5</route-info-timeout-interval>
        <garbage-collection-interval>5</garbage-collection-interval>
        <route-table-update-interval>5</route-table-update-interval>
      </config>
    </timers>
  </instance>
</ripng>

```

Command Syntax

```
timers basic <5-2147483647> <5-2147483647> <5-2147483647>
```

Configure address

Use this attribute to specify a link local address of neighbor router. It is used for each connected point-to-point link. This command exchanges non-broadcast routing information. It can be used multiple times for additional neighbors

Attribute Name: address

Attribute Type: inet:ipv6-address

Attribute Name: if-name

Attribute Type: string

Netconf edit-config payload

```
<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
  <instance>
    <neighbors>
      <neighbor> <!-- operation="delete"-->
        <address>X:X::X:X</address>
        <config>
          <address>X:X::X:X</address>
          <if-name>IFNAME</if-name>
        </config>
      </neighbor>
    </neighbors>
  </instance>
</ripng>
```

Command Syntax

```
neighbor X:X::X:X IFNAME
```

Configure type

Use this attribute to decide the type of packets to which the filtering is applied

Attribute Name: type

Attribute Type: enum (in|out)

Attribute Name: route-map-name

Attribute Type: string

Attribute Range: 1-63

Netconf edit-config payload

```
<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
  <instance>
    <interfaces>
      <interface>
        <name>IFNAME</name>
        <config>
          <name>WORD</name>
        </config>
      <filtering-route-maps>
        <filtering-route-map>
          <type>in</type>
          <config>
            <type>in</type>
            <route-map-name>WORD</route-map-name>
          </config>
        </filtering-route-map>
      </filtering-route-maps>
    </interface>
  </instance>
</ripng>
```

```
</filtering-route-maps>
</interface>
</interfaces>
</instance>
</ripng>
```

Command Syntax

```
route-map WORD (in|out) IFNAME
```

Configure metric

This attribute describes the metric used for offset list

Attribute Name: metric

Attribute Type: uint8

Attribute Range: 0-16

Attribute Name: access-list-name

Attribute Type: string

Netconf edit-config payload

```
<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
  <instance>
    <interfaces>
      <interface>
        <name>IFNAME</name>
        <config>
          <name>WORD</name>
        </config>
      <offset-lists>
        <offset-list>
          <direction>in</direction>
          <config>
            <direction>in</direction>
            <access-list-name>WORD</access-list-name>
          </config>
          <metric>0</metric>
        </offset-list>
      </offset-lists>
    </interface>
  </interfaces>
</instance>
</ripng>
```

Command Syntax

```
offset-list WORD (in|out) <0-16> IFNAME
```

Configure direction

Use this attribute to decide the type of packets to which the distribute list is applied

Attribute Name: direction

Attribute Type: enum (in|out)

Attribute Name: access-list-name

Attribute Type: string

Netconf edit-config payload

```
<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
  <instance>
    <interfaces>
      <interface>
        <name>IFNAME</name>
        <config>
          <name>WORD</name>
        </config>
      </interface>
    </interfaces>
    <distributed-lists>
      <distributed-list>
        <direction>in</direction>
        <config>
          <direction>in</direction>
          <access-list-name>WORD</access-list-name>
        </config>
      </distributed-list>
    </distributed-lists>
  </instance>
</ripng>
```

Command Syntax

```
distribute-list WORD (in|out) IFNAME
```

Configure direction

Use this attribute to decide the type of packets to which the distribute list prefix is applied

Attribute Name: direction

Attribute Type: enum (in|out)

Attribute Name: list-name

Attribute Type: string

Netconf edit-config payload

```
<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
  <instance>
    <interfaces>
      <interface>
        <name>IFNAME</name>
        <config>
          <name>WORD</name>
        </config>
      </interface>
    </interfaces>
  </instance>
</ripng>
```

```

    </config>
  <distributed-prefix-lists>
  <distributed-prefix-list>
    <direction>in</direction>
    <config>
      <direction>in</direction>
      <list-name>WORD</list-name>
    </config>
  </distributed-prefix-list>
</distributed-prefix-lists>
</interface>
</interfaces>
</instance>
</ripng>

```

Command Syntax

```
distributed-list prefix WORD (in|out) IFNAME
```

Configure metric

This attribute describes the metric used for offset list

Attribute Name: metric

Attribute Type: uint8

Attribute Range: 0-16

Attribute Name: access-list-name

Attribute Type: string

Netconf edit-config payload

```

<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
  <instance>
    <offset-lists>
    <offset-list>
      <direction>in</direction>
      <config>
        <direction>in</direction>
        <access-list-name>WORD</access-list-name>
      </config>
      <metric>0</metric>
    </offset-list>
  </offset-lists>
</instance>
</ripng>

```

Command Syntax

```
offset-list WORD (in|out) <0-16>
```

Configure direction

Use this attribute to decide the type of packets to which the distribute list is applied

Attribute Name: direction

Attribute Type: enum (in|out)

Attribute Name: access-list-name

Attribute Type: string

Netconf edit-config payload

```
<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
  <instance>
    <distribute-lists>
      <distribute-list>
        <direction>in</direction>
        <config>
          <direction>in</direction>
          <access-list-name>WORD</access-list-name>
        </config>
      </distribute-list>
    </distribute-lists>
  </instance>
</ripng>
```

Command Syntax

```
distribute-list WORD (in|out)
```

Configure direction

Use this attribute to decide the type of packets to which the distribute list prefix is applied

Attribute Name: direction

Attribute Type: enum (in|out)

Attribute Name: list-name

Attribute Type: string

Netconf edit-config payload

```
<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
  <instance>
    <distribute-prefix-lists>
      <distribute-prefix-list>
        <direction>in</direction>
        <config>
          <direction>in</direction>
          <list-name>WORD</list-name>
        </config>
      </distribute-prefix-list>
    </distribute-prefix-lists>
  </instance>
</ripng>
```

```
</instance>
</ripng>
```

Command Syntax

```
distribute-list prefix WORD (in|out)
```

debug ipv6 rip (all|events|packet send|packet rcv|packet|packet detail|nsm|rib)

Attribute Name: terminal-debug-options

Attribute Type: bits (all|events|packet send|packet rcv|packet|packet detail|nsm|rib)

Netconf RPC payload

```
<ripng-terminal-debug-on xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
  <terminal-debug-options>all</terminal-debug-options>
</ripng-terminal-debug-on>
```

Command Syntax

```
debug ipv6 rip (all|events|packet send|packet rcv|packet|packet detail|nsm|rib)
```

no debug ipv6 rip (all|events|packet send|packet rcv|packet|packet detail|nsm|rib)

Attribute Name: terminal-debug-options

Attribute Type: bits (all|events|packet send|packet rcv|packet|packet detail|nsm|rib)

Netconf RPC payload

```
<ripng-terminal-debug-off xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
  <terminal-debug-options>all</terminal-debug-options>
</ripng-terminal-debug-off>
```

Command Syntax

```
no debug ipv6 rip (all|events|packet send|packet rcv|packet|packet detail|nsm|rib)
```

clear ipv6 rip route (kernel|connected|static|isis|ospf6|bgp|rip|all)

Attribute Name: type

Attribute Type: enum (kernel|connected|static|isis|ospf6|bgp|rip|all)

Netconf RPC payload

```
<ripng-clear-route xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
  <type>kernel</type>
</ripng-clear-route>
```

Command Syntax

```
clear ipv6 rip route (kernel|connected|static|isis|ospf6|bgp|rip|all)
```

clear ipv6 rip route X:X::X:X/M

Attribute Name: prefix

Attribute Type: string

Netconf RPC payload

```
<ripng-clear-route-prefix xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
  <prefix>X:X::X:X/M</prefix>
</ripng-clear-route-prefix>
```

Command Syntax

```
clear ipv6 rip route X:X::X:X/M
```

IPI-RIPNG-VRF

Configure vrf name

VRF Name

Attribute Name: vrf-name

Attribute Type: string

Netconf edit-config payload

```
<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
  <instance>
    <vrfs>
      <vrf> <!-- operation="delete"-->
        <vrf-name>NAME</vrf-name>
        <config>
          <vrf-name>WORD</vrf-name>
        </config>
      </vrf>
    </vrfs>
  </instance>
</ripng>
```

Command Syntax

```
address-family ipv6 vrf NAME
```

Configure enable cisco metric behavior

Use this attribute to enable the metric update consistent with Cisco

Attribute Name: enable-cisco-metric-behavior

Attribute Type: boolean

Netconf edit-config payload

```
<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
  <instance>
    <vrfs>
      <vrf>
        <vrf-name>NAME</vrf-name>
        <config>
          <vrf-name>WORD</vrf-name>
        </config>
        <enable-cisco-metric-behavior>true</enable-cisco-metric-behavior> <!--
operation="delete"-->
      </vrf>
    </vrfs>
  </instance>
</ripng>
```

Command Syntax

```
cisco-metric-behavior enable
```

Configure enable cisco metric behavior

Use this attribute to enable the metric update consistent with Cisco

Attribute Name: enable-cisco-metric-behavior

Attribute Type: boolean

Netconf edit-config payload

```
<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
  <instance>
    <vrfs>
      <vrf>
        <vrf-name>NAME</vrf-name>
        <config>
          <vrf-name>WORD</vrf-name>
        </config>
        <enable-cisco-metric-behavior>true</enable-cisco-metric-behavior> <!--
operation="delete"-->
      </vrf>
    </vrfs>
  </instance>
</ripng>
```

Command Syntax

```
cisco-metric-behavior disable
```

Configure passive interfaces

Use this attribute to block RIP broadcast on the interface

Attribute Name: passive-interfaces

Attribute Type: string

Netconf edit-config payload

```
<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
  <instance>
    <vrfs>
      <vrf>
        <vrf-name>NAME</vrf-name>
        <config>
          <vrf-name>WORD</vrf-name>
        </config>
        <passive-interfaces>IFNAME</passive-interfaces> <!-- operation="delete"-->
      </vrf>
    </vrfs>
  </instance>
</ripng>
```

Command Syntax

```
passive-interface IFNAME
```

Configure distance

Use this attribute to set the administrative distance. The administrative distance is a feature used by the routers to select the path when there are two or more different routes to the same destination from two different routing protocols. A smaller administrative distance indicating a more reliable protocol

Attribute Name: distance

Attribute Type: uint8

Default Value: 120

Attribute Range: 1-255

Netconf edit-config payload

```
<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
  <instance>
    <vrfs>
      <vrf>
        <vrf-name>NAME</vrf-name>
        <config>
          <vrf-name>WORD</vrf-name>
          <distance>1</distance> <!-- operation="delete"-->
        </config>
      </vrf>
    </vrfs>
  </instance>
</ripng>
```

Command Syntax

```
distance <1-255>
```

Configure static routes

Use this attribute to configure static RIP routes

Attribute Name: static-routes

Attribute Type: string

Netconf edit-config payload

```
<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
  <instance>
    <vrfs>
      <vrf>
        <vrf-name>NAME</vrf-name>
        <config>
          <vrf-name>WORD</vrf-name>
        </config>
        <static-routes>X:X::X:X/M</static-routes> <!-- operation="delete"-->
      </vrf>
    </vrfs>
  </instance>
</ripng>
```

Command Syntax

```
route X:X::X:X/M
```

Configure aggregate prefixes

Use this attribute to configure aggregate prefixes

Attribute Name: aggregate-prefixes

Attribute Type: string

Netconf edit-config payload

```
<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
  <instance>
    <vrfs>
      <vrf>
        <vrf-name>NAME</vrf-name>
        <config>
          <vrf-name>WORD</vrf-name>
        </config>
        <aggregate-prefixes>X:X::X:X/M</aggregate-prefixes> <!--
operation="delete"-->
      </vrf>
    </vrfs>
  </instance>
</ripng>
```

Command Syntax

```
aggregate-address X:X::X:X/M
```

Configure default metric

Use this attribute to specify the metrics to be assigned to redistributed routers

Attribute Name: default-metric

Attribute Type: uint8

Default Value: 1

Attribute Range: 1-15

Netconf edit-config payload

```
<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
  <instance>
    <vrfs>
      <vrf>
        <vrf-name>NAME</vrf-name>
        <config>
          <vrf-name>WORD</vrf-name>
        </config>
        <default-metric>1</default-metric> <!-- operation="delete"-->
      </vrf>
    </vrfs>
  </instance>
</ripng>
```

Command Syntax

```
default-metric <1-15>
```

Configure originate default route

Use this attribute to add default routes to the RIP updates

Attribute Name: originate-default-route

Attribute Type: empty

Netconf edit-config payload

```
<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
  <instance>
    <vrfs>
      <vrf>
        <vrf-name>NAME</vrf-name>
        <config>
          <vrf-name>WORD</vrf-name>
        </config>
        </originate-default-route><!-- operation="delete"-->
      </vrf>
    </vrfs>
  </instance>
</ripng>
```

Command Syntax

```
default-information originate
```

Configure receive buffer size

Use this attribute to run-time configure the RIP UDP receive-buffer size

Attribute Name: receive-buffer-size

Attribute Type: uint32

Default Value: 8192

Attribute Range: 8192-2147483647

Netconf edit-config payload

```
<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
  <instance>
    <vrfs>
      <vrf>
        <vrf-name>NAME</vrf-name>
        <config>
          <vrf-name>WORD</vrf-name>
        </config>
        <receive-buffer-size>8192</receive-buffer-size> <!-- operation="delete"-->
      </vrf>
    </vrfs>
  </instance>
</ripng>
```

Command Syntax

```
recv-buffer-size <8192-2147483647>
```

Configure route type

Use this attribute to redistribute information from other routing protocols

Attribute Name: route-type

Attribute Type: enum (connected|static|ospf6|bgp)

Netconf edit-config payload

```
<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
  <instance>
    <vrfs>
      <vrf>
        <vrf-name>NAME</vrf-name>
        <config>
          <vrf-name>WORD</vrf-name>
        </config>
        <redistribute-policies>
          <redistribute-policy> <!-- operation="delete"-->

```

```
        <route-type>connected</route-type>
        <config>
            <route-type>connected</route-type>
        </config>
    </redistribute-policy>
</redistribute-policies>
</vrf>
</vrfs>
</instance>
</ripng>
```

Command Syntax

```
redistribute (connected|static|ospf6|bgp)
```

Configure route map

Use this attribute to redistribute route-map from other routing protocols

Attribute Name: route-map

Attribute Type: string

Attribute Name: metric

Attribute Type: uint8

Attribute Range: 0-16

Netconf edit-config payload

```
<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
  <instance>
    <vrfs>
      <vrf>
        <vrf-name>NAME</vrf-name>
        <config>
          <vrf-name>WORD</vrf-name>
        </config>
        <redistribute-policies>
          <redistribute-policy>
            <route-type>connected</route-type>
            <config>
              <route-type>connected</route-type>
              <metric>0</metric>
            </config>
            <route-map>WORD</route-map>
          </redistribute-policy>
        </redistribute-policies>
      </vrf>
    </vrfs>
  </instance>
</ripng>
```

Command Syntax

```
redistribute (connected|static|ospf6|bgp) metric <0-16> route-map WORD
```

Configure metric

Use this attribute to redistribute metric information from other routing protocols

Attribute Name: metric

Attribute Type: uint8

Attribute Range: 0-16

Netconf edit-config payload

```
<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
  <instance>
    <vrfs>
      <vrf>
        <vrf-name>NAME</vrf-name>
        <config>
          <vrf-name>WORD</vrf-name>
        </config>
        <redistribute-policies>
          <redistribute-policy>
            <route-type>connected</route-type>
            <config>
              <route-type>connected</route-type>
            </config>
            <metric>0</metric>
          </redistribute-policy>
        </redistribute-policies>
      </vrf>
    </vrfs>
  </instance>
</ripng>
```

Command Syntax

```
redistribute (connected|static|ospf6|bgp) metric <0-16>
```

Configure route map

Use this attribute to redistribute route-map from other routing protocols

Attribute Name: route-map

Attribute Type: string

Netconf edit-config payload

```
<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
  <instance>
    <vrfs>
      <vrf>
```

```
<vrf-name>NAME</vrf-name>
<config>
  <vrf-name>WORD</vrf-name>
</config>
<redistribute-policies>
<redistribute-policy>
  <route-type>connected</route-type>
  <config>
    <route-type>connected</route-type>
  </config>
  <route-map>WORD</route-map>
</redistribute-policy>
</redistribute-policies>
</vrf>
</vrfs>
</instance>
</ripng>
```

Command Syntax

```
redistribute (connected|static|ospf6|bgp) route-map WORD
```

Configure route table update interval

Use this attribute to adjust basic routing protocol update timer interval

Attribute Name: route-table-update-interval

Attribute Type: uint32

Attribute Range: 5-2147483647

Attribute Name: route-info-timeout-interval

Attribute Type: uint32

Attribute Range: 5-2147483647

Attribute Name: garbage-collection-interval

Attribute Type: uint32

Attribute Range: 5-2147483647

Netconf edit-config payload

```
<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
<instance>
  <vrfs>
  <vrf>
    <vrf-name>NAME</vrf-name>
    <config>
      <vrf-name>WORD</vrf-name>
    </config>
    <timers>
    <config>
      <route-info-timeout-interval>5</route-info-timeout-interval>
    </config>
  </vrf>
  </vrfs>
</instance>
</ripng>
```

```

        <garbage-collection-interval>5</garbage-collection-interval>
        <route-table-update-interval>5</route-table-update-interval>
    </config>
</timers>
</vrf>
</vrfs>
</instance>
</ripng>

```

Command Syntax

```
timers basic <5-2147483647> <5-2147483647> <5-2147483647>
```

Configure address

Use this attribute to specify a link local address of neighbor router. It is used for each connected point-to-point link. This command exchanges non-broadcast routing information. It can be used multiple times for additional neighbors

Attribute Name: address

Attribute Type: inet:ipv6-address

Attribute Name: if-name

Attribute Type: string

Netconf edit-config payload

```

<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
  <instance>
    <vrfs>
      <vrf>
        <vrf-name>NAME</vrf-name>
        <config>
          <vrf-name>WORD</vrf-name>
        </config>
        <neighbors>
          <neighbor> <!-- operation="delete"-->
            <address>X:X::X:X</address>
            <config>
              <address>X:X::X:X</address>
              <if-name>IFNAME</if-name>
            </config>
          </neighbor>
        </neighbors>
      </vrf>
    </vrfs>
  </instance>
</ripng>

```

Command Syntax

```
neighbor X:X::X:X IFNAME
```

Configure type

Use this attribute to decide the type of packets to which the filtering is applied

Attribute Name: type

Attribute Type: enum (in|out)

Attribute Name: route-map-name

Attribute Type: string

Attribute Range: 1-63

Netconf edit-config payload

```
<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
  <instance>
    <vrfs>
      <vrf>
        <vrf-name>NAME</vrf-name>
        <config>
          <vrf-name>WORD</vrf-name>
        </config>
        <interfaces>
          <interface>
            <name>IFNAME</name>
            <config>
              <name>WORD</name>
            </config>
            <filtering-route-maps>
              <filtering-route-map>
                <type>in</type>
                <config>
                  <type>in</type>
                  <route-map-name>WORD</route-map-name>
                </config>
              </filtering-route-map>
            </filtering-route-maps>
          </interface>
        </interfaces>
      </vrf>
    </vrfs>
  </instance>
</ripng>
```

Command Syntax

```
route-map WORD (in|out) IFNAME
```

Configure metric

This attribute describes the metric used for offset list

Attribute Name: metric

Attribute Type: uint8

Attribute Range: 0-16

Attribute Name: access-list-name

Attribute Type: string

Netconf edit-config payload

```

<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
  <instance>
    <vrfs>
      <vrf>
        <vrf-name>NAME</vrf-name>
        <config>
          <vrf-name>WORD</vrf-name>
        </config>
        <interfaces>
          <interface>
            <name>IFNAME</name>
            <config>
              <name>WORD</name>
            </config>
            <offset-lists>
              <offset-list>
                <direction>in</direction>
                <config>
                  <direction>in</direction>
                  <access-list-name>WORD</access-list-name>
                </config>
                <metric>0</metric>
              </offset-list>
            </offset-lists>
          </interface>
        </interfaces>
      </vrf>
    </vrfs>
  </instance>
</ripng>

```

Command Syntax

```
offset-list WORD (in|out) <0-16> IFNAME
```

Configure direction

Use this attribute to decide the type of packets to which the distribute list is applied

Attribute Name: direction

Attribute Type: enum (in|out)

Attribute Name: access-list-name

Attribute Type: string

Netconf edit-config payload

```
<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
  <instance>
    <vrfs>
      <vrf>
        <vrf-name>NAME</vrf-name>
        <config>
          <vrf-name>WORD</vrf-name>
        </config>
        <interfaces>
          <interface>
            <name>IFNAME</name>
            <config>
              <name>WORD</name>
            </config>
            <distribute-lists>
              <distribute-list>
                <direction>in</direction>
                <config>
                  <direction>in</direction>
                  <access-list-name>WORD</access-list-name>
                </config>
              </distribute-list>
            </distribute-lists>
          </interface>
        </interfaces>
      </vrf>
    </vrfs>
  </instance>
</ripng>
```

Command Syntax

```
distribute-list WORD (in|out) IFNAME
```

Configure direction

Use this attribute to decide the type of packets to which the distribute list prefix is applied

Attribute Name: direction

Attribute Type: enum (in|out)

Attribute Name: list-name

Attribute Type: string

Netconf edit-config payload

```
<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
  <instance>
    <vrfs>
      <vrf>
        <vrf-name>NAME</vrf-name>
```

```

<config>
  <vrf-name>WORD</vrf-name>
</config>
<interfaces>
<interface>
  <name>IFNAME</name>
  <config>
    <name>WORD</name>
  </config>
  <distributed-prefix-lists>
  <distributed-prefix-list>
    <direction>in</direction>
    <config>
      <direction>in</direction>
      <list-name>WORD</list-name>
    </config>
  </distributed-prefix-list>
</distributed-prefix-lists>
</interface>
</interfaces>
</vrf>
</vrfs>
</instance>
</ripng>

```

Command Syntax

```
distributed-list prefix WORD (in|out) IFNAME
```

Configure metric

This attribute describes the metric used for offset list

Attribute Name: metric

Attribute Type: uint8

Attribute Range: 0-16

Attribute Name: access-list-name

Attribute Type: string

Netconf edit-config payload

```

<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
  <instance>
    <vrfs>
    <vrf>
      <vrf-name>NAME</vrf-name>
      <config>
        <vrf-name>WORD</vrf-name>
      </config>
      <offset-lists>
      <offset-list>

```

```
        <direction>in</direction>
    </config>
    <direction>in</direction>
    <access-list-name>WORD</access-list-name>
</config>
    <metric>0</metric>
</offset-list>
</offset-lists>
</vrf>
</vrfs>
</instance>
</ripng>
```

Command Syntax

```
offset-list WORD (in|out) <0-16>
```

Configure direction

Use this attribute to decide the type of packets to which the distribute list is applied

Attribute Name: direction

Attribute Type: enum (in|out)

Attribute Name: access-list-name

Attribute Type: string

Netconf edit-config payload

```
<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
  <instance>
    <vrfs>
      <vrf>
        <vrf-name>NAME</vrf-name>
        <config>
          <vrf-name>WORD</vrf-name>
        </config>
        <distribute-lists>
          <distribute-list>
            <direction>in</direction>
            <config>
              <direction>in</direction>
              <access-list-name>WORD</access-list-name>
            </config>
          </distribute-list>
        </distribute-lists>
      </vrf>
    </vrfs>
  </instance>
</ripng>
```

Command Syntax

```
distributed-list WORD (in|out)
```

Configure direction

Use this attribute to decide the type of packets to which the distributed list prefix is applied

Attribute Name: direction

Attribute Type: enum (in|out)

Attribute Name: list-name

Attribute Type: string

Netconf edit-config payload

```
<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
  <instance>
    <vrfs>
      <vrf>
        <vrf-name>NAME</vrf-name>
        <config>
          <vrf-name>WORD</vrf-name>
        </config>
        <distributed-prefix-lists>
          <distributed-prefix-list>
            <direction>in</direction>
            <config>
              <direction>in</direction>
              <list-name>WORD</list-name>
            </config>
          </distributed-prefix-list>
        </distributed-prefix-lists>
      </vrf>
    </vrfs>
  </instance>
</ripng>
```

Command Syntax

```
distributed-list prefix WORD (in|out)
```

IPI-ARP

Configure ip address

Use this attribute to create a static ARP entry

Attribute Name: ip-address

Attribute Type: inet:ipv4-address

Attribute Name: mac-address

Attribute Type: string

Netconf edit-config payload

```
<arp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-arp">
  <entries>
    <entry> <!-- operation="delete"-->
      <ip-address>A.B.C.D</ip-address>
      <config>
        <ip-address>A.B.C.D</ip-address>
        <vrf-name>NAME</vrf-name>
        <mac-address>XXXX.XXXX.XXXX</mac-address>
      </config>
      <vrf-name>NAME</vrf-name>
    </entry>
  </entries>
</arp>
```

Command Syntax

```
ip arp (vrf NAME|) A.B.C.D XXXX.XXXX.XXXX
```

Configure respond to arp request

Use this attribute to set the response to ARP requests for the IP address

Attribute Name: respond-to-arp-request

Attribute Type: empty

Attribute Name: mac-address

Attribute Type: string

Netconf edit-config payload

```
<arp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-arp">
  <entries>
    <entry>
      <ip-address>A.B.C.D</ip-address>
      <config>
        <ip-address>A.B.C.D</ip-address>
        <vrf-name>NAME</vrf-name>
        <mac-address>XXXX.XXXX.XXXX</mac-address>
      </config>
      <vrf-name>NAME</vrf-name>
      </respond-to-arp-request>
    </entry>
  </entries>
</arp>
```

Command Syntax

```
ip arp (vrf NAME|) A.B.C.D XXXX.XXXX.XXXX alias
```

Configure enable

Enable/Disable arp event debug

Attribute Name: enable

Attribute Type: empty

Netconf edit-config payload

```
<arp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-arp">
  <debug>
    <config>
      </enable><!-- operation="delete"-->
    </config>
  </debug>
</arp>
```

Command Syntax

```
debug ip arp event
```

Configure enable proxy arp

Use this attribute to enable the proxy ARP feature

Attribute Name: enable-proxy-arp

Attribute Type: empty

Netconf edit-config payload

```
<arp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-arp">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
        </enable-proxy-arp><!-- operation="delete"-->
      </config>
    </interface>
  </interfaces>
</arp>
```

Command Syntax

```
ip proxy-arp
```

Configure enable local proxy arp

Use this attribute to enable the local proxy ARP feature

Attribute Name: enable-local-proxy-arp

Attribute Type: empty

Netconf edit-config payload

```
<arp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-arp">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
    </enable-local-proxy-arp><!-- operation="delete"-->
  </interface>
</interfaces>
</arp>
```

Command Syntax

```
ip local-proxy-arp
```

Configure enable ip redirects

Use this attribute to enable ICMP redirects in kernel

Attribute Name: enable-ip-redirects

Attribute Type: empty

Netconf edit-config payload

```
<arp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-arp">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
    </enable-ip-redirects><!-- operation="delete"-->
  </interface>
</interfaces>
</arp>
```

Command Syntax

```
ip redirects
```

Configure arp ageing timeout

Use this attribute to set the ARP aging timeout. The bridge aging time affects the ARP entries which are dependent upon the MAC addresses in hardware. If a MAC address ages out, it causes the corresponding ARP entry to refresh.

Attribute Name: arp-ageing-timeout

Attribute Type: uint16

Default Value: 1500

Attribute Range: 60-28800

Netconf edit-config payload

```
<arp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-arp">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      <arp-ageing-timeout>60</arp-ageing-timeout> <!-- operation="delete"-->
    </interface>
  </interfaces>
</arp>
```

Command Syntax

```
arp-ageing-timeout <60-28800>
```

Configure arp reachable time

Use this attribute to set the ARP reachable time.

Attribute Name: arp-reachable-time

Attribute Type: uint16

Default Value: 60

Attribute Range: 10-3600

Netconf edit-config payload

```
<arp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-arp">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      <arp-reachable-time>10</arp-reachable-time> <!-- operation="delete"-->
    </interface>
  </interfaces>
</arp>
```

Command Syntax

```
arp-reachable-time <10-3600>
```

debug ip arp event

Netconf RPC payload

```
<arp-terminal-debug-on xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-arp"/>
```

Command Syntax

```
debug ip arp event
```

no debug ip arp event

Netconf RPC payload

```
<arp-terminal-debug-off xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-arp"/>
```

Command Syntax

```
no debug ip arp event
```

clear arp (A.B.C.D|) (vrf (all|VRFNAME|default)|)

Attribute Name: ip-address

Attribute Type: inet:ipv4-address

Attribute Name: vrf-name

Attribute Type: string

Netconf RPC payload

```
<clear-arp-entry xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-arp">
  <ip-address>A.B.C.D</ip-address>
  <vrf-name>all</vrf-name>
</clear-arp-entry>
```

Command Syntax

```
clear arp (A.B.C.D|) (vrf (all|VRFNAME|default)|)
```

clear arp IFNAME (vrf (all|VRFNAME|default)|)

Attribute Name: if-name

Attribute Type: string

Attribute Name: vrf-name

Attribute Type: string

Netconf RPC payload

```
<clear-arp-entry-per-interface xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-arp">
  <if-name>IFNAME</if-name>
  <vrf-name>all</vrf-name>
</clear-arp-entry-per-interface>
```

Command Syntax

```
clear arp IFNAME (vrf (all|VRFNAME|default)|)
```

IPI-NEIGHBOR-DISCOVERY

Configure interface name

Use this attribute to add a static neighbor entry of the interface name

Attribute Name: interface-name

Attribute Type: string

Attribute Name: mac-address

Attribute Type: string

Netconf edit-config payload

```
<neighbor-discovery xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-neighbor-
discovery">
  <entry> <!-- operation="delete"-->
    <interface-name>IFNAME</interface-name>
    <config>
      <interface-name>IFNAME</interface-name>
      <ipv6-address>X:X::X:X</ipv6-address>
      <mac-address>XXXX.XXXX.XXXX</mac-address>
    </config>
    <ipv6-address>X:X::X:X</ipv6-address>
  </entry>
</neighbor-discovery>
```

Command Syntax

```
ipv6 neighbor X:X::X:X IFNAME XXXX.XXXX.XXXX
```

Configure interface name

Configure interface name

Use this attribute to add a static neighbor entry of the interface name

Attribute Name: interface-name

Attribute Type: string

Netconf edit-config payload

```
<neighbor-discovery xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-neighbor-
discovery">
  <entry>
    <interface-name>IFNAME</interface-name>
    <config>
      <interface-name>IFNAME</interface-name>
      <ipv6-address>X:X::X:X</ipv6-address>
    </config>
    <ipv6-address>X:X::X:X</ipv6-address>
  </entry>
</neighbor-discovery>
```

```
</entry>
</neighbor-discovery>
```

Command Syntax

```
ipv6 neighbor X:X::X:X IFNAME IFNAME
```

Configure enable

Use this attribute to enable debugging for neighbor events.

Attribute Name: enable

Attribute Type: empty

Netconf edit-config payload

```
<neighbor-discovery xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-neighbor-
discovery">
  <debug>
    <config>
      </enable><!-- operation="delete"-->
    </config>
  </debug>
</neighbor-discovery>
```

Command Syntax

```
debug ipv6 nd event
```

Configure nd ageing timeout

Use this attribute to set the neighbor ageing timeout value.

Attribute Name: nd-ageing-timeout

Attribute Type: uint16

Default Value: 1500

Attribute Range: 60-28800

Netconf edit-config payload

```
<neighbor-discovery xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-neighbor-
discovery">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
        </config>
        <nd-ageing-timeout>60</nd-ageing-timeout> <!-- operation="delete"-->
      </interface>
    </interfaces>
  </neighbor-discovery>
```

Command Syntax

```
nd-ageing-timeout <60-28800>
```

Configure nd reachable time

Use this attribute to set neighbor reachable time value.

Attribute Name: nd-reachable-time

Attribute Type: uint32

Default Value: 60

Attribute Range: 10-3600

Netconf edit-config payload

```
<neighbor-discovery xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-neighbor-
discovery">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      <nd-reachable-time>10</nd-reachable-time> <!-- operation="delete"-->
    </interface>
  </interfaces>
</neighbor-discovery>
```

Command Syntax

```
nd-reachable-time <10-3600>
```

debug ipv6 nd event

Netconf RPC payload

```
<nd-terminal-debug-on xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-neighbor-
discovery"/>
```

Command Syntax

```
debug ipv6 nd event
```

no debug ipv6 nd event

Netconf RPC payload

```
<nd-terminal-debug-off xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-neighbor-
discovery"/>
```

Command Syntax

```
no debug ipv6 nd event
```

clear ipv6 neighbors (X:X::X:X/M|) (vrf (all|VRFNAME|default|))

Attribute Name: ipv6-address

Attribute Type: string

Attribute Name: vrf-name

Attribute Type: string

Netconf RPC payload

```
<clear-ipv6-nd-entry xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-neighbor-
discovery">
  <ipv6-address>X:X::X:X/M</ipv6-address>
  <vrf-name>all</vrf-name>
</clear-ipv6-nd-entry>
```

Command Syntax

```
clear ipv6 neighbors (X:X::X:X/M|) (vrf (all|VRFNAME|default|))
```

clear ipv6 neighbors IFNAME (vrf (all|VRFNAME|default|))

Attribute Name: if-name

Attribute Type: string

Attribute Name: vrf-name

Attribute Type: string

Netconf RPC payload

```
<clear-ipv6-nd-entry-per-interface xmlns="http://www.ipinfusion.com/yang/ocnos/
ipi-neighbor-discovery">
  <if-name>IFNAME</if-name>
  <vrf-name>all</vrf-name>
</clear-ipv6-nd-entry-per-interface>
```

Command Syntax

```
clear ipv6 neighbors IFNAME (vrf (all|VRFNAME|default|))
```

IPI-USER-SESSION-MANAGEMENT

Configure console id

Attribute used to set line console identification.

Attribute Name: console-id

Attribute Type: enum (0)

Netconf edit-config payload

```
<user-session xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-user-session-
management">
```

```

<line-console>
<console> <!-- operation="delete"-->
  <console-id>0</console-id>
  <config>
    <console-id>0</console-id>
  </config>
</console>
</line-console>
</user-session>

```

Command Syntax

```
line console <0-0>
```

Configure privilege level

Attribute used to set line privilege level.

Attribute Name: privilege-level

Attribute Type: uint8

Attribute Range: 1-16

Netconf edit-config payload

```

<user-session xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-user-session-
management">
  <line-console>
    <console>
      <console-id>0</console-id>
      <config>
        <console-id>0</console-id>
      </config>
      <privilege-level>1</privilege-level> <!-- operation="delete"-->
    </console>
  </line-console>
</user-session>

```

Command Syntax

```
privilege level <1-16>
```

Configure command history max limit

Attribute used to set line maximum limit to history commands.

Attribute Name: command-history-max-limit

Attribute Type: uint32

Attribute Range: 0-2147483647

Netconf edit-config payload

```

<user-session xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-user-session-
management">
  <line-console>

```

```
<console>
  <console-id>0</console-id>
  <config>
    <console-id>0</console-id>
  </config>
  <command-history-max-limit>0</command-history-max-limit> <!--
operation="delete"-->
</console>
</line-console>
</user-session>
```

Command Syntax

```
history max <0-2147483647>
```

Configure seconds

Attribute used to set line timeout in seconds. The default is 0.

Attribute Name: seconds

Attribute Type: uint32

Attribute Range: 0-2147483

Attribute Name: minutes

Attribute Type: uint32

Attribute Range: 0-35791

Netconf edit-config payload

```
<user-session xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-user-session-
management">
  <line-console>
    <console>
      <console-id>0</console-id>
      <config>
        <console-id>0</console-id>
      </config>
    </console>
  </line-console>
  <timeout>
    <config>
      <minutes>0</minutes> <!-- operation="delete"-->
      <seconds>0</seconds> <!-- operation="delete"-->
    </config>
  </timeout>
</user-session>
```

Command Syntax

```
exec-timeout <0-35791> <0-2147483>
```

Configure minutes

Attribute used to set line timeout in minutes. The default is 10 minutes.

Attribute Name: minutes

Attribute Type: uint32

Attribute Range: 0-35791

Netconf edit-config payload

```
<user-session xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-user-session-
management">
  <line-console>
    <console>
      <console-id>0</console-id>
      <config>
        <console-id>0</console-id>
      </config>
    <timeout>
      <config>
        <minutes>0</minutes>
      </config>
    </timeout>
  </console>
</line-console>
</user-session>
```

Command Syntax

```
exec-timeout <0-35791>
```

Configure privilege level

Attribute used to set line privilege level.

Attribute Name: privilege-level

Attribute Type: uint8

Attribute Range: 1-16

Netconf edit-config payload

```
<user-session xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-user-session-
management">
  <line-vty>
    <vty>
      <vty-id>0</vty-id>
      <config>
        <vty-id>0</vty-id>
        <privilege-level>1</privilege-level> <!-- operation="delete"-->
      </config>
    </vty>
  </line-vty>
</user-session>
```

Command Syntax

```
privilege level <1-16>
```

Configure command history max limit

Attribute used to set line maximum limit to history commands.

Attribute Name: command-history-max-limit

Attribute Type: uint32

Attribute Range: 0-2147483647

Netconf edit-config payload

```
<user-session xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-user-session-
management">
  <line-vty>
    <vty>
      <vty-id>0</vty-id>
      <config>
        <vty-id>0</vty-id>
        </config>
        <command-history-max-limit>0</command-history-max-limit> <!--
operation="delete"-->
      </vty>
    </line-vty>
  </user-session>
```

Command Syntax

```
history max <0-2147483647>
```

Configure seconds

Attribute used to set line timeout in seconds. The default is 0.

Attribute Name: seconds

Attribute Type: uint32

Attribute Range: 0-2147483

Attribute Name: minutes

Attribute Type: uint32

Attribute Range: 0-35791

Netconf edit-config payload

```
<user-session xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-user-session-
management">
  <line-vty>
    <vty>
      <vty-id>0</vty-id>
      <config>
        <vty-id>0</vty-id>
```

```
    </config>
  <timeout>
    <config>
      <minutes>0</minutes> <!-- operation="delete"-->
      <seconds>0</seconds> <!-- operation="delete"-->
    </config>
  </timeout>
</vty>
</line-vty>
</user-session>
```

Command Syntax

```
exec-timeout <0-35791> <0-2147483>
```

Configure minutes

Attribute used to set line timeout in minutes. The default is 10 minutes.

Attribute Name: minutes

Attribute Type: uint32

Attribute Range: 0-35791

Netconf edit-config payload

```
<user-session xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-user-session-
management">
  <line-vty>
    <vty>
      <vty-id>0</vty-id>
      <config>
        <vty-id>0</vty-id>
      </config>
    <timeout>
      <config>
        <minutes>0</minutes>
      </config>
    </timeout>
  </vty>
</line-vty>
</user-session>
```

Command Syntax

```
exec-timeout <0-35791>
```

clear line WORD

Attribute Name: line-name

Attribute Type: string

Attribute Range: 1-64

Netconf RPC payload

```
<clear-line xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-user-session-management">
  <line-name>WORD</line-name>
</clear-line>
```

Command Syntax

```
clear line WORD
```

mem-info imi monitor-start

Attribute Name: mem-info-imi

Attribute Type: boolean

Netconf RPC payload

```
<mem-info-monitor-start xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-user-session-management">
  <mem-info-imi>true</mem-info-imi/>
</mem-info-monitor-start>
```

Command Syntax

```
mem-info imi monitor-start
```

mem-info imi monitor-stop

Attribute Name: mem-info-imi

Attribute Type: boolean

Netconf RPC payload

```
<mem-info-monitor-stop xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-user-session-management">
  <mem-info-imi>true</mem-info-imi/>
</mem-info-monitor-stop>
```

Command Syntax

```
mem-info imi monitor-stop
```

IPI-IPV6-ROUTER-ADV

Configure suppress ra

Use this attribute to suppress IPv6 Router Advertisements

Attribute Name: suppress-ra

Attribute Type: uint8

Netconf edit-config payload

```
<router-advertisement xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ipv6-router-adv">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
    </suppress-ra><!-- operation="delete"-->
  </interface>
</interfaces>
</router-advertisement>
```

Command Syntax

```
ipv6 nd suppress-ra
```

Configure suppress ra mtu

Use this attribute to disable sending MTU in Router Advertisement messages

Attribute Name: suppress-ra-mtu

Attribute Type: uint8

Netconf edit-config payload

```
<router-advertisement xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ipv6-router-adv">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
    </suppress-ra-mtu><!-- operation="delete"-->
  </interface>
</interfaces>
</router-advertisement>
```

Command Syntax

```
ipv6 nd suppress-ra mtu
```

Configure managed flag

Use this attribute to use DHCP for address config by host

This command is supported when following feature are enabled IPv6 Router Advertisement

Attribute Name: managed-flag

Attribute Type: empty

Netconf edit-config payload

```
<router-advertisement xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ipv6-router-adv">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
    </managed-flag><!-- operation="delete"-->
  </interface>
</interfaces>
</router-advertisement>
```

Command Syntax

```
ipv6 nd managed-config-flag
```

Configure other config flag

Use this attribute to use DHCP for non-address config by host

This command is supported when following feature are enabled IPv6 Router Advertisement

Attribute Name: other-config-flag

Attribute Type: empty

Netconf edit-config payload

```
<router-advertisement xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ipv6-router-adv">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
    </other-config-flag><!-- operation="delete"-->
  </interface>
</interfaces>
</router-advertisement>
```

Command Syntax

```
ipv6 nd other-config-flag
```

Configure current hop limit

Use this attribute to set advertised current hop limit

This command is supported when following feature are enabled IPv6 Router Advertisement

Attribute Name: current-hop-limit

Attribute Type: uint8

Default Value: 64

Attribute Range: 0-255

Netconf edit-config payload

```
<router-advertisement xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ipv6-router-adv">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      <current-hop-limit>0</current-hop-limit> <!-- operation="delete"-->
    </interface>
  </interfaces>
</router-advertisement>
```

Command Syntax

```
ipv6 nd current-hoplimit <0-255>
```

Configure link mtu

Use this attribute to set advertised link-mtu option

This command is supported when following feature are enabled IPv6 Router Advertisement

Attribute Name: link-mtu

Attribute Type: uint32

Default Value: 1500

Attribute Range: 1280-65535

Netconf edit-config payload

```
<router-advertisement xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ipv6-router-adv">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      <link-mtu>1280</link-mtu> <!-- operation="delete"-->
    </interface>
  </interfaces>
</router-advertisement>
```

Command Syntax

```
ipv6 nd link-mtu <1280-65535>
```

Configure dad attempts

Use this attribute to set number of attempts for duplicate address detection

This command is supported when following feature are enabled IPv6 Router Advertisement

Attribute Name: dad-attempts

Attribute Type: uint16

Default Value: 1

Attribute Range: 0-600

Netconf edit-config payload

```
<router-advertisement xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ipv6-router-adv">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      <dad-attempts>0</dad-attempts> <!-- operation="delete"-->
    </interface>
  </interfaces>
</router-advertisement>
```

Command Syntax

```
ipv6 nd dad attempts <0-600>
```

Configure off link

The IPV6 Router Advertisement prefix off-link flag

This command is supported when following feature are enabled IPv6 Router Advertisement

Attribute Name: off-link

Attribute Type: empty

Netconf edit-config payload

```
<router-advertisement xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ipv6-router-adv">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      <ipv6-prefixes>
        <config>
          </off-link><!-- operation="delete"-->
        </config>
      </ipv6-prefixes>
    </interface>
  </interfaces>
</router-advertisement>
```

```
</interface>
</interfaces>
</router-advertisement>
```

Command Syntax

```
ipv6 nd prefix offlink
```

Configure no auto configuration

The IPV6 Router Advertisement prefix no auto-configuration flag

This command is supported when following feature are enabled IPv6 Router Advertisement

Attribute Name: no-auto-configuration

Attribute Type: empty

Netconf edit-config payload

```
<router-advertisement xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ipv6-router-adv">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
    <ipv6-prefixes>
      <config>
        </no-auto-configuration><!-- operation="delete"-->
      </config>
    </ipv6-prefixes>
  </interface>
</interfaces>
</router-advertisement>
```

Command Syntax

```
ipv6 nd prefix no-autoconf
```

Configure valid lifetime

The IPV6 Router Advertisement prefix valid lifetime

This command is supported when following feature are enabled IPv6 Router Advertisement

Attribute Name: valid-lifetime

Attribute Type: uint32

Default Value: 2592000

Attribute Range: 0-4294967295

Netconf edit-config payload

```
<router-advertisement xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ipv6-router-adv">
```

```
<interfaces>
<interface>
  <name>WORD</name>
  <config>
    <name>WORD</name>
  </config>
</interface>
</interfaces>
</router-advertisement>
```

Command Syntax

```
ipv6 nd prefix valid-lifetime <0-4294967295>
```

Configure preferred lifetime

The IPV6 Router Advertisement prefix preferred lifetime

This command is supported when following feature are enabled IPv6 Router Advertisement

Attribute Name: preferred-lifetime

Attribute Type: uint32

Default Value: 604800

Attribute Range: 0-4294967295

Netconf edit-config payload

```
<router-advertisement xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ipv6-router-adv">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
    </interface>
  </interfaces>
  <ipv6-prefixes>
    <config>
      <preferred-lifetime>0</preferred-lifetime> <!-- operation="delete"-->
    </config>
  </ipv6-prefixes>
</router-advertisement>
```

Command Syntax

```
ipv6 nd prefix preferred-lifetime <0-4294967295>
```

Configure ipv6 address

The IPV6 Router Advertisement prefix address

This command is supported when following feature are enabled IPv6 Router Advertisement

Attribute Name: ipv6-address

Attribute Type: string

Netconf edit-config payload

```
<router-advertisement xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ipv6-router-adv">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
    <ipv6-prefixes>
      <ipv6-prefix> <!-- operation="delete"-->
        <ipv6-address>X:X::X:X/M</ipv6-address>
        <config>
          <ipv6-address>X:X::X:X/M</ipv6-address>
        </config>
      </ipv6-prefix>
    </ipv6-prefixes>
  </interface>
</interfaces>
</router-advertisement>
```

Command Syntax

```
ipv6 nd prefix X:X::X:X/M
```

Configure preferred lifetime

The IPV6 Router Advertisement prefix address preferred lifetime

This command is supported when following feature are enabled IPv6 Router Advertisement

Attribute Name: preferred-lifetime

Attribute Type: uint32

Default Value: 604800

Attribute Range: 0-4294967295

Attribute Name: valid-lifetime

Attribute Type: uint32

Default Value: 2592000

Attribute Range: 0-4294967295

Netconf edit-config payload

```
<router-advertisement xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ipv6-router-adv">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
    </interface>
  </interfaces>
  <ipv6-prefixes>
    <ipv6-prefix>
      <ipv6-address>X:X::X:X/M</ipv6-address>
      <config>
        <ipv6-address>X:X::X:X/M</ipv6-address>
        <valid-lifetime>0</valid-lifetime>
        <preferred-lifetime>0</preferred-lifetime>
      </config>
    </ipv6-prefix>
  </ipv6-prefixes>
</router-advertisement>
```

Command Syntax

```
ipv6 nd prefix X:X::X:X/M <0-4294967295> <0-4294967295>
```

Configure off link

The IPV6 Router Advertisement prefix off-link flag

This command is supported when following feature are enabled IPv6 Router Advertisement

Attribute Name: off-link

Attribute Type: empty

Attribute Name: valid-lifetime

Attribute Type: uint32

Default Value: 2592000

Attribute Range: 0-4294967295

Attribute Name: preferred-lifetime

Attribute Type: uint32

Default Value: 604800

Attribute Range: 0-4294967295

Netconf edit-config payload

```
<router-advertisement xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ipv6-router-adv">
  <interfaces>
    <interface>
```

```

    <name>WORD</name>
  <config>
    <name>WORD</name>
  </config>
<ipv6-prefixes>
<ipv6-prefix>
  <ipv6-address>X:X::X:X/M</ipv6-address>
  <config>
    <ipv6-address>X:X::X:X/M</ipv6-address>
    <valid-lifetime>0</valid-lifetime>
    <preferred-lifetime>0</preferred-lifetime>
  </config>
  </off-link>
</ipv6-prefix>
</ipv6-prefixes>
</interface>
</interfaces>
</router-advertisement>

```

Command Syntax

```
ipv6 nd prefix X:X::X:X/M <0-4294967295> <0-4294967295> off-link
```

Configure no auto configuration

The IPV6 Router Advertisement prefix no auto-configuration flag

This command is supported when following feature are enabled IPv6 Router Advertisement

Attribute Name: no-auto-configuration

Attribute Type: empty

Attribute Name: valid-lifetime

Attribute Type: uint32

Default Value: 2592000

Attribute Range: 0-4294967295

Attribute Name: preferred-lifetime

Attribute Type: uint32

Default Value: 604800

Attribute Range: 0-4294967295

Netconf edit-config payload

```

<router-advertisement xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ipv6-router-adv">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
    
```

```
<ipv6-prefixes>
<ipv6-prefix>
  <ipv6-address>X:X::X:X/M</ipv6-address>
  <config>
    <ipv6-address>X:X::X:X/M</ipv6-address>
    <valid-lifetime>0</valid-lifetime>
    <preferred-lifetime>0</preferred-lifetime>
  </config>
</no-auto-configuration>
</ipv6-prefix>
</ipv6-prefixes>
</interface>
</interfaces>
</router-advertisement>
```

Command Syntax

```
ipv6 nd prefix X:X::X:X/M <0-4294967295> <0-4294967295> no-autoconfig
```

Configure no auto configuration

The IPV6 Router Advertisement prefix no auto-configuration flag

This command is supported when following feature are enabled IPv6 Router Advertisement

Attribute Name: no-auto-configuration

Attribute Type: empty

Attribute Name: valid-lifetime

Attribute Type: uint32

Default Value: 2592000

Attribute Range: 0-4294967295

Attribute Name: preferred-lifetime

Attribute Type: uint32

Default Value: 604800

Attribute Range: 0-4294967295

Attribute Name: off-link

Attribute Type: empty

Netconf edit-config payload

```
<router-advertisement xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ipv6-router-adv">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
    </interface>
  </interfaces>
```

```

<ipv6-prefix>
  <ipv6-address>X:X::X:X/M</ipv6-address>
  <config>
    <ipv6-address>X:X::X:X/M</ipv6-address>
    <valid-lifetime>0</valid-lifetime>
    <preferred-lifetime>0</preferred-lifetime>
    </off-link>
  </config>
</no-auto-configuration>
</ipv6-prefix>
</ipv6-prefixes>
</interface>
</interfaces>
</router-advertisement>

```

Command Syntax

```
ipv6 nd prefix X:X::X:X/M <0-4294967295> <0-4294967295> off-link no-autoconfig
```

Configure reachable time

Use this attribute to set advertised reachability time

This command is supported when following feature are enabled IPv6 Router Advertisement

Attribute Name: reachable-time

Attribute Type: uint32

Default Value: 0

Attribute Range: 0-3600000

Netconf edit-config payload

```

<router-advertisement xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ipv6-router-adv">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
    </interface>
  </interfaces>
  <timers>
    <config>
      <reachable-time>0</reachable-time> <!-- operation="delete"-->
    </config>
  </timers>
</router-advertisement>

```

Command Syntax

```
ipv6 nd reachable-time <0-3600000>
```

Configure retransmission time

Use this attribute to set advertised retransmission timer

This command is supported when following feature are enabled IPv6 Router Advertisement

Attribute Name: retransmission-time

Attribute Type: uint32

Default Value: 0

Attribute Range: 0-4294967295

Netconf edit-config payload

```
<router-advertisement xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ipv6-router-adv">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
    </interface>
  </interfaces>
  <timers>
    <config>
      <retransmission-time>0</retransmission-time> <!-- operation="delete"-->
    </config>
  </timers>
</router-advertisement>
```

Command Syntax

```
ipv6 nd retransmission-time <0-4294967295>
```

Configure router lifetime

Use this attribute to set IPv6 router advertisement lifetime

This command is supported when following feature are enabled IPv6 Router Advertisement

Attribute Name: router-lifetime

Attribute Type: uint16

Default Value: 1800

Attribute Range: 0-9000

Netconf edit-config payload

```
<router-advertisement xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ipv6-router-adv">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
```

```

        <name>WORD</name>
    </config>
</timers>
<config>
    <router-lifetime>0</router-lifetime> <!-- operation="delete"-->
</config>
</timers>
</interface>
</interfaces>
</router-advertisement>

```

Command Syntax

```
ipv6 nd ra-lifetime <0-9000>
```

Configure max ra interval

Use this attribute to set maximum IPv6 router advertisement interval (min-ra-interval must be no greater than 0.75*max-ra-interval)

This command is supported when following feature are enabled IPv6 Router Advertisement

Attribute Name: max-ra-interval

Attribute Type: uint32

Attribute Range: 4-1800

Attribute Name: min-ra-interval

Attribute Type: uint32

Attribute Range: 3-1350

Netconf edit-config payload

```

<router-advertisement xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ipv6-router-adv">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
    </interface>
  </interfaces>
  <ra-interval>
    <config>
      <min-ra-interval>3</min-ra-interval>
      <max-ra-interval>4</max-ra-interval>
    </config>
  </ra-interval>
</router-advertisement>

```

Command Syntax

```
ipv6 nd ra-interval <4-1800> (<3-1350>|)
```

IPI-ERPSV2

Configure ring name

G.8032 ring name. This attribute uniquely identifies a ring on the network device.

This command is supported when following feature are enabled ERPS V2 feature

Attribute Name: ring-name

Attribute Type: string

Attribute Range: 1-255

Netconf edit-config payload

```
<erpsv2 xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-erpsv2">
  <rings>
    <ring> <!-- operation="delete"-->
      <ring-name>RINGNAME</ring-name>
      <config>
        <ring-name>RINGNAME</ring-name>
      </config>
    </ring>
  </rings>
</erpsv2>
```

Command Syntax

```
g8032 ring RINGNAME
```

Configure east interface

East port associated to the protection ring

This command is supported when following feature are enabled ERPS V2 feature

Attribute Name: east-interface

Attribute Type: string

Attribute Range: 1-33

Netconf edit-config payload

```
<erpsv2 xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-erpsv2">
  <rings>
    <ring>
      <ring-name>RINGNAME</ring-name>
      <config>
        <ring-name>RINGNAME</ring-name>
      </config>
    </ring>
  </rings>
</erpsv2>
```

```
<east-interface>IFNAME</east-interface> <!-- operation="delete"-->
</ring>
</rings>
</erpsv2>
```

Command Syntax

```
east-interface IFNAME
```

Configure west interface

West port associated to the protection ring

This command is supported when following feature are enabled ERPS V2 feature

Attribute Name: west-interface

Attribute Type: string

Attribute Range: 1-33

Netconf edit-config payload

```
<erpsv2 xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-erpsv2">
<rings>
<ring>
  <ring-name>RINGNAME</ring-name>
  <config>
    <ring-name>RINGNAME</ring-name>
  </config>
  <west-interface>IFNAME</west-interface> <!-- operation="delete"-->
</ring>
</rings>
</erpsv2>
```

Command Syntax

```
west-interface IFNAME
```

Configure description

Textual description of the ring.

This command is supported when following feature are enabled ERPS V2 feature

Attribute Name: description

Attribute Type: string

Attribute Range: 1-255

Netconf edit-config payload

```
<erpsv2 xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-erpsv2">
<rings>
<ring>
  <ring-name>RINGNAME</ring-name>
  <config>
```

```

        <ring-name>RINGNAME</ring-name>
    </config>
    <description>1</description> <!-- operation="delete"-->
</ring>
</rings>
</erpsv2>

```

Command Syntax

description LINE

Configure profile name

G.8032 ring profile name

This command is supported when following feature are enabled ERPS V2 feature

Attribute Name: profile-name

Attribute Type: string

Attribute Range: 1-32

Netconf edit-config payload

```

<erpsv2 xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-erpsv2">
  <profiles>
    <profile> <!-- operation="delete"-->
      <profile-name>PROFILENAME</profile-name>
    <config>
      <profile-name>PROFILENAME</profile-name>
    </config>
  </profile>
</profiles>
</erpsv2>

```

Command Syntax

g8032 profile PROFILENAME

Configure wait to restore timer

In revertive mode the 'wait to restore' (WTR) timer is used to prevent frequent operation of the protection switching due to intermittent signal failure defects. When recovering from a Signal fail, the delay timer must be long enough to allow the recovering network to become stable. WTR timer is activated on RPL owner node. When WTR timer is expired RPL owner node initiates the reversion process by transmitting an R-APS (NR, RB) message.

This command is supported when following feature are enabled ERPS V2 feature

Attribute Name: wait-to-restore-timer

Attribute Type: uint8

Default Value: 5

Attribute Range: 1-12

Netconf edit-config payload

```
<erpsv2 xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-erpsv2">
  <profiles>
    <profile>
      <profile-name>PROFILENAME</profile-name>
      <config>
        <profile-name>PROFILENAME</profile-name>
      </config>
      <wait-to-restore-timer>1</wait-to-restore-timer> <!-- operation="delete"-->
    </profile>
  </profiles>
</erpsv2>
```

Command Syntax

```
timer wait-to-restore <1-12>
```

Configure hold off timer

The hold-off timer is used to coordinate the timing of protection switches. When a new defect or more severe defect occurs (new SF), this event is not to be reported immediately to protection switching if the provisioned hold-off timer value is non-zero. Instead, the hold-off timer is started. When the hold-off timer expires, the trail that started the timer is checked as to whether a defect still exists. If one does exist, that defect is reported to protection switching. Hold off timer values SHOULD be specified in multiple of 100.

This command is supported when following feature are enabled ERPS V2 feature

Attribute Name: hold-off-timer

Attribute Type: uint16

Default Value: 0

Attribute Range: 0-10000

Netconf edit-config payload

```
<erpsv2 xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-erpsv2">
  <profiles>
    <profile>
      <profile-name>PROFILENAME</profile-name>
      <config>
        <profile-name>PROFILENAME</profile-name>
      </config>
      <hold-off-timer>0</hold-off-timer> <!-- operation="delete"-->
    </profile>
  </profiles>
</erpsv2>
```

Command Syntax

```
timer hold-off <0-10000>
```

Configure guard time

The guard time is used to prevent Ethernet ring nodes from acting upon outdated R-APS messages and prevents the possibility of forming a closed loop. This timer period SHOULD be greater than the maximum expected forwarding delay in which an R-APS message traverses the entire ring. The period of the guard timer MAY be configured by the operator in 10 ms steps between 10 ms and 2 seconds.

This command is supported when following feature are enabled ERPS V2 feature

Attribute Name: guard-time

Attribute Type: uint16

Default Value: 500

Attribute Range: 10-2000

Netconf edit-config payload

```
<erpsv2 xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-erpsv2">
  <profiles>
    <profile>
      <profile-name>PROFILENAME</profile-name>
      <config>
        <profile-name>PROFILENAME</profile-name>
      </config>
      <guard-time>10</guard-time> <!-- operation="delete"-->
    </profile>
  </profiles>
</erpsv2>
```

Command Syntax

```
timer guard-time <10-2000>
```

Configure protection mode

This leaf defines G.8032 ring protection mode. A ring may operate in revertive or non-revertive mode. In revertive operation, after the condition(s) causing a switch has cleared, the traffic channel is restored to the working transport entity, i.e., blocked on the RPL. In non-revertive operation, the traffic channel continues to use the RPL, if it has not failed, after a switch condition has cleared.

This command is supported when following feature are enabled ERPS V2 feature

Attribute Name: protection-mode

Attribute Type: enum (revertive|non-revertive)

Default Value: revertive

Netconf edit-config payload

```
<erpsv2 xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-erpsv2">
  <profiles>
    <profile>
      <profile-name>PROFILENAME</profile-name>
      <config>
        <profile-name>PROFILENAME</profile-name>
      </config>
    </profile>
  </profiles>
</erpsv2>
```

```
<protection-mode>revertive</protection-mode> <!-- operation="delete"-->
</profile>
</profiles>
</erpsv2>
```

Command Syntax

```
switching mode (revertive|non-revertive)
```

Configure name

ERPS instance identifier

This command is supported when following feature are enabled ERPS V2 feature

Attribute Name: name

Attribute Type: string

Attribute Range: 1-255

Netconf edit-config payload

```
<erpsv2 xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-erpsv2">
<erp-instances>
<erp-instance> <!-- operation="delete"-->
  <name>INSTANCENAME</name>
  <config>
    <name>INSTANCENAME</name>
  </config>
</erp-instance>
</erp-instances>
</erpsv2>
```

Command Syntax

```
g8032 erp-instance INSTANCENAME
```

Configure ring name

This parameter specifies the ring instance to associated with the ERPS instance

This command is supported when following feature are enabled ERPS V2 feature

Attribute Name: ring-name

Attribute Type: string

Attribute Range: 1-255

Netconf edit-config payload

```
<erpsv2 xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-erpsv2">
<erp-instances>
<erp-instance>
  <name>INSTANCENAME</name>
  <config>
    <name>INSTANCENAME</name>
```

```
</config>
<ring-name>RINGNAME</ring-name> <!-- operation="delete"-->
</erp-instance>
</erp-instances>
</erpsv2>
```

Command Syntax

```
ring RINGNAME
```

Configure mapped profile name

G.8032 ring profile name. If this profile exists in the profile configuration list, profile parameters will be imported from it, default values will be used otherwise.

This command is supported when following feature are enabled ERPS V2 feature

Attribute Name: mapped-profile-name

Attribute Type: string

Attribute Range: 1-32

Netconf edit-config payload

```
<erpsv2 xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-erpsv2">
  <erp-instances>
    <erp-instance>
      <name>INSTANCENAME</name>
      <config>
        <name>INSTANCENAME</name>
      </config>
      <mapped-profile-name>PROFILENAME</mapped-profile-name> <!-- operation="delete"-->
    </erp-instance>
  </erp-instances>
</erpsv2>
```

Command Syntax

```
g8032-profile PROFILENAME
```

Configure ring type

Defines type of a ethernet ring. A ring can be configured as major ring where ring nodes are connected in closed loop or as a sub-ring when a ring may not have a complete closed loop

This command is supported when following feature are enabled ERPS V2 feature

Attribute Name: ring-type

Attribute Type: enum (major-ring|sub-ring|sub-ring-vc)

Default Value: major-ring

Netconf edit-config payload

```
<erpsv2 xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-erpsv2">
  <erp-instances>
```

```

<erp-instance>
  <name>INSTANCENAME</name>
  <config>
    <name>INSTANCENAME</name>
  </config>
  <ring-type>major-ring</ring-type> <!-- operation="delete"-->
</erp-instance>
</erp-instances>
</erpsv2>

```

Command Syntax

```
ring-type (major-ring|sub-ring|sub-ring-vc)
```

Configure enable tcn propagation

Allows topology change notification (TCN) propagation to the ERPS ring if it is enabled

This command is supported when following feature are enabled ERPS V2 feature

Attribute Name: enable-tcn-propagation

Attribute Type: empty

Netconf edit-config payload

```

<erpsv2 xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-erpsv2">
  <erp-instances>
    <erp-instance>
      <name>INSTANCENAME</name>
      <config>
        <name>INSTANCENAME</name>
      </config>
      </enable-tcn-propagation><!-- operation="delete"-->
    </erp-instance>
  </erp-instances>
</erpsv2>

```

Command Syntax

```
enable-tcn-propagation
```

Configure tcn to instances

List of Instance that are to be notified when TCN occurs for this instance if topology change notification (TCN) propagation is enabled

This command is supported when following feature are enabled ERPS V2 feature

Attribute Name: tcn-to-instances

Attribute Type: string

Attribute Range: 1-255

Netconf edit-config payload

```
<erpsv2 xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-erpsv2">
```

```
<erp-instances>
<erp-instance>
  <name>INSTANCENAME</name>
  <config>
    <name>INSTANCENAME</name>
  </config>
  <tcn-to-instances>INSTANCENAME</tcn-to-instances> <!-- operation="delete"-->
</erp-instance>
</erp-instances>
</erpsv2>
```

Command Syntax

```
tcn-to-instance INSTANCENAME
```

Configure non virtual channel

Creates a non-virtual channel

This command is supported when following feature are enabled ERPS V2 feature

Attribute Name: non-virtual-channel

Attribute Type: empty

Netconf edit-config payload

```
<erpsv2 xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-erpsv2">
<erp-instances>
<erp-instance>
  <name>INSTANCENAME</name>
  <config>
    <name>INSTANCENAME</name>
  </config>
  </non-virtual-channel><!-- operation="delete"-->
</erp-instance>
</erp-instances>
</erpsv2>
```

Command Syntax

```
non-virtual-channel
```

Configure ring id

G.8032 ring instance identifier (Ring ID).

This command is supported when following feature are enabled ERPS V2 feature

Attribute Name: ring-id

Attribute Type: uint8

Attribute Range: 1-239

Netconf edit-config payload

```
<erpsv2 xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-erpsv2">
```

```

<erp-instances>
<erp-instance>
  <name>INSTANCENAME</name>
  <config>
    <name>INSTANCENAME</name>
  </config>
  <ring-id>1</ring-id> <!-- operation="delete"-->
</erp-instance>
</erp-instances>
</erpsv2>

```

Command Syntax

```
ring-id <1-239>
```

Configure description

Textual description of the erps-instance.

This command is supported when following feature are enabled ERPS V2 feature

Attribute Name: description

Attribute Type: string

Attribute Range: 1-255

Netconf edit-config payload

```

<erpsv2 xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-erpsv2">
<erp-instances>
<erp-instance>
  <name>INSTANCENAME</name>
  <config>
    <name>INSTANCENAME</name>
  </config>
  <description>1</description> <!-- operation="delete"-->
</erp-instance>
</erp-instances>
</erpsv2>

```

Command Syntax

```
description LINE
```

Configure owner port id

This identifies the ring port for which role is configured

This command is supported when following feature are enabled ERPS V2 feature

Attribute Name: owner-port-id

Attribute Type: enum (east-interface|west-interface)

Netconf edit-config payload

```
<erpsv2 xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-erpsv2">
```

```
<erp-instances>
<erp-instance>
  <name>INSTANCENAME</name>
  <config>
    <name>INSTANCENAME</name>
  </config>
</instance-role>
<config>
  <owner-port-id>east-interface</owner-port-id> <!-- operation="delete"-->
</config>
</instance-role>
</erp-instance>
</erp-instances>
</erpsv2>
```

Command Syntax

```
rpl role owner (east-interface|west-interface)
```

Configure neighbor port id

This identifies the ring port for which role is configured

This command is supported when following feature are enabled ERPS V2 feature

Attribute Name: neighbor-port-id

Attribute Type: enum (east-interface|west-interface)

Netconf edit-config payload

```
<erpsv2 xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-erpsv2">
<erp-instances>
<erp-instance>
  <name>INSTANCENAME</name>
  <config>
    <name>INSTANCENAME</name>
  </config>
<instance-role>
<config>
  <neighbor-port-id>east-interface</neighbor-port-id> <!-- operation="delete"-->
>
  </config>
</instance-role>
</erp-instance>
</erp-instances>
</erpsv2>
```

Command Syntax

```
rpl role neighbor (east-interface|west-interface)
```

Configure next neighbor port id

This identifies the ring port for which role is configured

This command is supported when following feature are enabled ERPS V2 feature

Attribute Name: next-neighbor-port-id

Attribute Type: enum (east-interface|west-interface)

Netconf edit-config payload

```
<erpsv2 xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-erpsv2">
  <erp-instances>
    <erp-instance>
      <name>INSTANCENAME</name>
      <config>
        <name>INSTANCENAME</name>
      </config>
      <instance-role>
        <config>
          <next-neighbor-port-id>east-interface</next-neighbor-port-id> <!--
operation="delete"-->
        </config>
      </instance-role>
    </erp-instance>
  </erp-instances>
</erpsv2>
```

Command Syntax

```
rpl role next-neighbor (east-interface|west-interface)
```

Configure non owner

This identifies the ring port for which role is configured

This command is supported when following feature are enabled ERPS V2 feature

Attribute Name: non-owner

Attribute Type: empty

Netconf edit-config payload

```
<erpsv2 xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-erpsv2">
  <erp-instances>
    <erp-instance>
      <name>INSTANCENAME</name>
      <config>
        <name>INSTANCENAME</name>
      </config>
      <instance-role>
        <config>
          </non-owner><!-- operation="delete"-->
        </config>
      </instance-role>
    </erp-instance>
  </erp-instances>
</erpsv2>
```

Command Syntax

```
rpl role non-owner
```

Configure level

Maintenance Endpoint Level (MEL) at which R-APS PDU is transmitted. All nodes in the ring must be configured with same APS level value.

This command is supported when following feature are enabled ERPS V2 feature

Attribute Name: level

Attribute Type: uint8

Attribute Range: 0-7

Netconf edit-config payload

```
<erpsv2 xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-erpsv2">
  <erp-instances>
    <erp-instance>
      <name>INSTANCENAME</name>
      <config>
        <name>INSTANCENAME</name>
      </config>
    <aps-channel>
      <config>
        <level>0</level> <!-- operation="delete"-->
      </config>
    </aps-channel>
  </erp-instance>
</erp-instances>
</erpsv2>
```

Command Syntax

```
aps-channel level <0-7>
```

Configure aps channel vlan

Ring wide control vlan-id used by ERPS instance to send and receive the RAPS messages in the ring

This command is supported when following feature are enabled ERPS V2 feature

Attribute Name: aps-channel-vlan

Attribute Type: uint16

Attribute Range: 2-4094

Netconf edit-config payload

```
<erpsv2 xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-erpsv2">
  <erp-instances>
    <erp-instance>
      <name>INSTANCENAME</name>
      <config>
```

```

        <name>INSTANCENAME</name>
    </config>
</aps-channel>
<config>
    <aps-channel-vlan>2</aps-channel-vlan> <!-- operation="delete"-->
</config>
</aps-channel>
</erp-instance>
</erp-instances>
</erpsv2>

```

Command Syntax

```
aps-channel vlan <2-4094>
```

Configure data vlan

List of VLAN-IDs, protected by ring instance. For example '2, 3-7, 9, 10-100' VLAN-IDs MUST not overlap with VLAN-IDs of any other instance of the same ring.

This command is supported when following feature are enabled ERPS V2 feature

Attribute Name: data-vlan

Attribute Type: string

Attribute Range: 2-4094

Netconf edit-config payload

```

<erpsv2 xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-erpsv2">
  <erp-instances>
    <erp-instance>
      <name>INSTANCENAME</name>
      <config>
        <name>INSTANCENAME</name>
      </config>
    </erp-instance>
  </erp-instances>
  <data>
    <config>
      <data-vlan>VLAN_RANGE</data-vlan> <!-- operation="delete"-->
    </config>
  </data>
</erpsv2>

```

Command Syntax

```
data vlan VLAN_RANGE
```

Configure attached instance

This parameter specifies the ERPS instance on major ring which allows the RAPS messages of Sub-ring, so RAPS message will be sent to other nodes in the sub-ring

This command is supported when following feature are enabled ERPS V2 feature

Attribute Name: attached-instance

Attribute Type: string

Attribute Range: 1-31

Attribute Name: channel-id

Attribute Type: uint16

Attribute Range: 2-4094

Netconf edit-config payload

```
<erpsv2 xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-erpsv2">
  <erp-instances>
    <erp-instance>
      <name>INSTANCENAME</name>
      <config>
        <name>INSTANCENAME</name>
      </config>
    <virtual-channel>
      <config>
        <channel-id>2</channel-id>
        <attached-instance>INSTANCENAME</attached-instance>
      </config>
    </virtual-channel>
  </erp-instance>
</erp-instances>
</erpsv2>
```

Command Syntax

```
virtual-channel (<2-4094>|) attached-to-instance INSTANCENAME
```

Configure options

Supported debug options for G.8032

This command is supported when following feature are enabled ERPS V2 feature

Attribute Name: options

Attribute Type: bits (all|tx|rx|fsm|timers|events|external|hal)

Netconf edit-config payload

```
<erpsv2 xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-erpsv2">
  <debug>
    <config>
      <options>all</options> <!-- operation="delete"-->
    </config>
  </debug>
</erpsv2>
```

Command Syntax

```
debug g8032 (all|tx|rx|fsm|timers|events|external|hal)
```

g8032 erp-instance INSTANCENAME (force-switch|manual-switch) (east-interface|west-interface)

Attribute Name: instance-name

Attribute Type: string

Attribute Range: 1-255

Attribute Name: operation

Attribute Type: enum (force-switch|manual-switch)

Attribute Name: port-id

Attribute Type: enum (east-interface|west-interface)

Netconf RPC payload

```
<erpsv2-switch-erp-instance xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-erpsv2">
  <instance-name>INSTANCENAME</instance-name>
  <operation>force-switch</operation>
  <port-id>east-interface</port-id>
</erpsv2-switch-erp-instance>
```

Command Syntax

```
g8032 erp-instance INSTANCENAME (force-switch|manual-switch) (east-interface|west-interface)
```

clear g8032 erp-instance INSTANCENAME

Attribute Name: instance-name

Attribute Type: string

Attribute Range: 1-255

Netconf RPC payload

```
<erpsv2-clear-ring-erp-instance xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-erpsv2">
  <instance-name>INSTANCENAME</instance-name>
</erpsv2-clear-ring-erp-instance>
```

Command Syntax

```
clear g8032 erp-instance INSTANCENAME
```

clear g8032 aps-statistics INSTANCENAME

Attribute Name: instance-name

Attribute Type: string

Attribute Range: 1-255

Netconf RPC payload

```
<erpsv2-clear-aps-statistics xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-erpsv2">
  <instance-name>INSTANCENAME</instance-name>
</erpsv2-clear-aps-statistics>
```

Command Syntax

```
clear g8032 aps-statistics INSTANCENAME
```

debug g8032 (all|tx|rx|fsm|timers|events|external|hal)

Attribute Name: terminal-debug-options

Attribute Type: bits (all|tx|rx|fsm|timers|events|external|hal)

Netconf RPC payload

```
<erpsv2-terminal-debug-on xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-erpsv2">
  <terminal-debug-options>all</terminal-debug-options>
</erpsv2-terminal-debug-on>
```

Command Syntax

```
debug g8032 (all|tx|rx|fsm|timers|events|external|hal)
```

no debug g8032 (all|tx|rx|fsm|timers|events|external|hal)

Attribute Name: terminal-debug-options

Attribute Type: bits (all|tx|rx|fsm|timers|events|external|hal)

Netconf RPC payload

```
<erpsv2-terminal-debug-off xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-erpsv2">
  <terminal-debug-options>all</terminal-debug-options>
</erpsv2-terminal-debug-off>
```

Command Syntax

```
no debug g8032 (all|tx|rx|fsm|timers|events|external|hal)
```

IPI-CFM

Configure cache enable

This attribute specifies the cache enable

Attribute Name: cache-enable

Attribute Type: uint8

Netconf edit-config payload

```
<cfm xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-cfm">
  <global>
    <linktrace>
      <cache>
        <config>
          </cache-enable>
        </config>
      </cache>
    </linktrace>
  </global>
</cfm>
```

Command Syntax

```
ethernet cfm traceroute cache
```

Configure cache size

This attribute specifies the cache size

Attribute Name: cache-size

Attribute Type: uint16

Default Value: 100

Attribute Range: 1-4095

Attribute Name: cache-enable

Attribute Type: empty

Netconf edit-config payload

```
<cfm xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-cfm">
  <global>
    <linktrace>
      <cache>
        <config>
          </cache-enable><!-- operation="delete"-->
          <cache-size>1</cache-size> <!-- operation="delete"-->
        </config>
      </cache>
    </linktrace>
  </global>
</cfm>
```

Command Syntax

```
ethernet cfm traceroute cache size <1-4095>
```

Configure options

This attribute enables debugging for CFM

This command is supported when following feature are enabled CFM feature

Attribute Name: options

Attribute Type: bits (events|rx|tx|loopback|traceroute|all)

Netconf edit-config payload

```
<cfm xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-cfm">
<debug>
<config>
  <options>events</options> <!-- operation="delete"-->
</config>
</debug>
</cfm>
```

Command Syntax

```
debug ethernet cfm (events|rx|tx|loopback|traceroute|all)
```

Configure type

Type discriminator for the value union described in the 'md-name' leaf

Attribute Name: type

Attribute Type: enum (no-name|character-string)

Attribute Name: level

Attribute Type: uint8

Attribute Range: 0-7

Attribute Name: mip-creation

Attribute Type: enum (none|default|explicit|static)

Netconf edit-config payload

```
<cfm xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-cfm">
<maintenance-domains>
<maintenance-domain>
  <md-name>DOMAIN_NAME</md-name>
  <config>
    <md-name>DOMAIN_NAME</md-name>
    <level>0</level>
    <mip-creation>none</mip-creation>
  </config>
  <type>no-name</type>
</maintenance-domain>
</maintenance-domains>
</cfm>
```

Command Syntax

```
ethernet cfm domain-type (no-name|character-string) domain-name DOMAIN_NAME level
<0-7> (mip-creation (none|default|explicit|static) |)
```

Configure ma name

The value union for the Maintenance Association Name.

Attribute Name: ma-name

Attribute Type: string

Attribute Range: 1-6

Attribute Name: type

Attribute Type: enum (string|integer|itu-t)

Netconf edit-config payload

```
<cfm xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-cfm">
<maintenance-domains>
<maintenance-domain>
  <md-name>DOMAIN_NAME</md-name>
  <config>
    <md-name>DOMAIN_NAME</md-name>
  </config>
</maintenance-domain>
</maintenance-domains>
<maintenance-associations>
<maintenance-association> <!-- operation="delete"-->
  <ma-name>MA_NAME</ma-name>
  <config>
    <ma-name>MA_NAME</ma-name>
    <type>string</type>
  </config>
</maintenance-association>
</maintenance-associations>
</maintenance-domain>
</maintenance-domains>
</cfm>
```

Command Syntax

```
service ma-type (string|integer|itu-t) ma-name MA_NAME
```

Configure bridge id

This parameter indicates which bridge this maintenance association will be augmented to.

This command is supported when following feature are enabled CFM feature

Attribute Name: bridge-id

Attribute Type: string

Attribute Name: vlan-id

Attribute Type: uint16

Attribute Range: 1-4094

Netconf edit-config payload

```
<cfm xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-cfm">
```

```
<maintenance-domains>
<maintenance-domain>
  <md-name>DOMAIN_NAME</md-name>
  <config>
    <md-name>DOMAIN_NAME</md-name>
  </config>
</maintenance-domains>
<maintenance-associations>
<maintenance-association>
  <ma-name>MA_NAME</ma-name>
  <config>
    <ma-name>MA_NAME</ma-name>
    <vlan-id>1</vlan-id> <!-- operation="delete"-->
  </config>
    <bridge-id>1</bridge-id> <!-- operation="delete"-->
</maintenance-association>
</maintenance-associations>
</maintenance-domain>
</maintenance-domains>
</cfm>
```

Command Syntax

```
vlan <1-4094> (bridge <1-32>|)
```

Configure bridge id

This parameter indicates which bridge this maintenance association will be augmented to.

This command is supported when following feature are enabled CFM feature

Attribute Name: bridge-id

Attribute Type: string

Attribute Name: link-level-ma

Attribute Type: empty

Netconf edit-config payload

```
<cfm xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-cfm">
<maintenance-domains>
<maintenance-domain>
  <md-name>DOMAIN_NAME</md-name>
  <config>
    <md-name>DOMAIN_NAME</md-name>
  </config>
</maintenance-domains>
<maintenance-associations>
<maintenance-association>
  <ma-name>MA_NAME</ma-name>
  <config>
    <ma-name>MA_NAME</ma-name>
    </link-level-ma><!-- operation="delete"-->
  </config>
    <bridge-id>1</bridge-id> <!-- operation="delete"-->
</maintenance-association>
</maintenance-associations>
</cfm>
```

```

</maintenance-association>
</maintenance-associations>
</maintenance-domain>
</maintenance-domains>
</cfm>

```

Command Syntax

```
link-level (bridge <1-32>|)
```

Configure mip creation

This parameter indicates whether the management entity can create MIPs for this MA

This command is supported when following feature are enabled CFM feature

Attribute Name: mip-creation

Attribute Type: enum (none|default|explicit|defer)

Netconf edit-config payload

```

<cfm xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-cfm">
<maintenance-domains>
<maintenance-domain>
  <md-name>DOMAIN_NAME</md-name>
  <config>
    <md-name>DOMAIN_NAME</md-name>
  </config>
</maintenance-domain>
</maintenance-domains>
<maintenance-associations>
<maintenance-association>
  <ma-name>MA_NAME</ma-name>
  <config>
    <ma-name>MA_NAME</ma-name>
    <mip-creation>none</mip-creation> <!-- operation="delete"-->
  </config>
</maintenance-association>
</maintenance-associations>
</maintenance-domain>
</maintenance-domains>
</cfm>

```

Command Syntax

```
(mip-creation (none|default|explicit|defer) |)
```

Configure inner vlan id

The inner VLAN ID monitored by this MA

This command is supported when following feature are enabled CFM feature

Attribute Name: inner-vlan-id

Attribute Type: uint16

Attribute Range: 1-4094

Attribute Name: vlan-id

Attribute Type: uint16

Attribute Range: 1-4094

Netconf edit-config payload

```
<cfm xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-cfm">
  <maintenance-domains>
    <maintenance-domain>
      <md-name>DOMAIN_NAME</md-name>
      <config>
        <md-name>DOMAIN_NAME</md-name>
      </config>
    </maintenance-domain>
  </maintenance-domains>
  <maintenance-associations>
    <maintenance-association>
      <ma-name>MA_NAME</ma-name>
      <config>
        <ma-name>MA_NAME</ma-name>
        <vlan-id>1</vlan-id> <!-- operation="delete"-->
      </config>
      <inner-vlan-id>1</inner-vlan-id> <!-- operation="delete"-->
    </maintenance-association>
  </maintenance-associations>
</cfm>
```

Command Syntax

```
vlan <1-4094> (inner-vlan <1-4094>|)
```

Configure link level ma

Use this attribute to set the Service as Link Level MA

This command is supported when following feature are enabled CFM feature

Attribute Name: link-level-ma

Attribute Type: empty

Netconf edit-config payload

```
<cfm xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-cfm">
  <maintenance-domains>
    <maintenance-domain>
      <md-name>DOMAIN_NAME</md-name>
      <config>
        <md-name>DOMAIN_NAME</md-name>
      </config>
    </maintenance-domain>
  </maintenance-domains>
  <maintenance-associations>
    <maintenance-association>
      <ma-name>MA_NAME</ma-name>
      <config>
```

```

    <ma-name>MA_NAME</ma-name>
  </config>
  </link-level-ma><!-- operation="delete"-->
</maintenance-association>
</maintenance-associations>
</maintenance-domain>
</maintenance-domains>
</cfm>

```

Command Syntax

```
link-level
```

Configure mip interface name

A list of static MIPs configured on the specified interfaces

This command is supported when following feature are enabled CFM feature

Attribute Name: mip-interface-name

Attribute Type: string

Netconf edit-config payload

```

<cfm xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-cfm">
  <maintenance-domains>
    <maintenance-domain>
      <md-name>DOMAIN_NAME</md-name>
      <config>
        <md-name>DOMAIN_NAME</md-name>
      </config>
    </maintenance-domain>
  </maintenance-domains>
  <maintenance-associations>
    <maintenance-association>
      <ma-name>MA_NAME</ma-name>
      <config>
        <ma-name>MA_NAME</ma-name>
      </config>
      <mip-interface-name>IFNAME</mip-interface-name> <!-- operation="delete"-->
    </maintenance-association>
  </maintenance-associations>
</cfm>

```

Command Syntax

```
ethernet ethernet cfm cfm mip interface IFNAME
```

Configure ccm interval

The interval between CCM transmissions to be used by all MEPs in the MA

This command is supported when following feature are enabled CFM feature

Attribute Name: ccm-interval

Attribute Type: enum (10ms|100ms|1s|10s|1min|10min)

Netconf edit-config payload

```
<cfm xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-cfm">
<maintenance-domains>
<maintenance-domain>
  <md-name>DOMAIN_NAME</md-name>
  <config>
    <md-name>DOMAIN_NAME</md-name>
  </config>
</maintenance-domain>
</maintenance-domains>
<maintenance-associations>
<maintenance-association>
  <ma-name>MA_NAME</ma-name>
  <config>
    <ma-name>MA_NAME</ma-name>
    <ccm-interval>10ms</ccm-interval> <!-- operation="delete"-->
  </config>
</maintenance-association>
</maintenance-associations>
</maintenance-domain>
</maintenance-domains>
</cfm>
```

Command Syntax

```
cc interval (10ms|100ms|1s|10s|1min|10min)
```

Configure static rmep identifiers

A list of static remote MEPs in a specified MA.

This command is supported when following feature are enabled CFM feature

Attribute Name: static-rmep-identifiers

Attribute Type: uint16

Attribute Range: 1-8191

Netconf edit-config payload

```
<cfm xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-cfm">
<maintenance-domains>
<maintenance-domain>
  <md-name>DOMAIN_NAME</md-name>
  <config>
    <md-name>DOMAIN_NAME</md-name>
  </config>
</maintenance-domain>
</maintenance-domains>
<maintenance-associations>
<maintenance-association>
  <ma-name>MA_NAME</ma-name>
  <config>
    <ma-name>MA_NAME</ma-name>
  </config>
</maintenance-association>
</maintenance-associations>
</cfm>
```

```

->      <static-rmep-identifiers>1</static-rmep-identifiers> <!-- operation="delete"-
      </maintenance-association>
      </maintenance-associations>
      </maintenance-domain>
      </maintenance-domains>
    </cfm>

```

Command Syntax

```
mep crosscheck mpid <1-8191>
```

Configure mep id

Integer that is unique among all the MEPs in the same MA. Other definition is: a small integer, unique over a given Maintenance Association, identifying a specific Maintenance association End Point

Attribute Name: mep-id

Attribute Type: uint16

Attribute Range: 1-8191

Attribute Name: direction

Attribute Type: enum (down|up)

Attribute Name: administrative-state

Attribute Type: enum (false|true)

Attribute Name: interface-name

Attribute Type: string

Netconf edit-config payload

```

<cfm xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-cfm">
  <maintenance-domains>
    <maintenance-domain>
      <md-name>DOMAIN_NAME</md-name>
      <config>
        <md-name>DOMAIN_NAME</md-name>
      </config>
    </maintenance-domains>
    <maintenance-association>
      <ma-name>MA_NAME</ma-name>
      <config>
        <ma-name>MA_NAME</ma-name>
      </config>
    </maintenance-association>
    <maintenance-end-points>
      <maintenance-end-point> <!-- operation="delete"-->
        <mep-id>1</mep-id>
        <config>
          <mep-id>1</mep-id>
          <direction>down</direction>
          <administrative-state>>false</administrative-state>
          <interface-name>IFNAME</interface-name>
        </config>
      </maintenance-end-point>
    </maintenance-end-points>
  </maintenance-domains>
</cfm>

```

```

    </config>
  </maintenance-end-point>
</maintenance-end-points>
</maintenance-association>
</maintenance-associations>
</maintenance-domain>
</maintenance-domains>
</cfm>

```

Command Syntax

```
ethernet cfm mep (down|up) mpid <1-8191> active (false|true) IFNAME
```

Configure bw mapped interface

This attribute specifies interface where the bandwidth shapers are to be applied

This command is supported when following feature are enabled CFM feature

Attribute Name: bw-mapped-interface

Attribute Type: string

Netconf edit-config payload

```

<cfm xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-cfm">
  <maintenance-domains>
    <maintenance-domain>
      <md-name>DOMAIN_NAME</md-name>
      <config>
        <md-name>DOMAIN_NAME</md-name>
      </config>
    </maintenance-domain>

      </config>
    </maintenance-association>
  </maintenance-associations>
  <maintenance-end-points>
    <maintenance-end-point>
      <mep-id>1</mep-id>
      <config>
        <mep-id>1</mep-id>
      </config>
    </maintenance-end-point>
  </maintenance-end-points>
  <bw-mapped-interface>IFNAME</bw-mapped-interface> <!--
operation="delete"-->
</maintenance-end-point>
</maintenance-end-points>
</maintenance-association>
</maintenance-associations>
</maintenance-domain>
</maintenance-domains>
</cfm>

```

Command Syntax

```
bw-mapped-interface IFNAME
```

Configure mep id

Integer that is unique among all the MEPs in the same MA. Other definition is: a small integer, unique over a given Maintenance Association, identifying a specific Maintenance association End Point

Attribute Name: mep-id

Attribute Type: uint16

Attribute Name: enable-cc-multicast

Attribute Type: empty

Netconf edit-config payload

```
<cfm xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-cfm">
<maintenance-domains>
<maintenance-domain>
  <md-name>DOMAIN_NAME</md-name>
  <config>
    <md-name>DOMAIN_NAME</md-name>
  </config>
</maintenance-domain>
</maintenance-domains>

    </continuity-check>
  </maintenance-end-point>
</maintenance-end-points>
</maintenance-association>
</maintenance-associations>
</maintenance-domain>
</maintenance-domains>
</cfm>
```

Command Syntax

```
cc multicast state enable
```

Configure lowest fault priority defect

The lowest priority defect that is allowed to generate a Fault Alarm. The non-existence of this leaf means that no defects are to be reported

This command is supported when following feature are enabled CFM feature

Attribute Name: lowest-fault-priority-defect

Attribute Type: enum (defRDICCM|defMACstatus|defRemoteCCM|defErrorCCM|defXconCCM)

Default Value: defMACstatus

Netconf edit-config payload

```
<cfm xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-cfm">
  <maintenance-domains>
    <maintenance-domain>
      <md-name>DOMAIN_NAME</md-name>

```

Command Syntax

```
clear ethernet cfm statistics mep <1-8191> domain DOMAIN_NAME ma MA_NAME
```

cfm snmp restart

Netconf RPC payload

```
<cfm-snmp-restart xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-cfm"/>
```

Command Syntax

```
cfm snmp restart
```

debug ethernet cfm (events|rx|tx|loopback|traceroute|all)

Attribute Name: terminal-debug-options

Attribute Type: bits (events|rx|tx|loopback|traceroute|all)

Netconf RPC payload

```
<cfm-terminal-debug-on xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-cfm">
  <terminal-debug-options>events</terminal-debug-options>
</cfm-terminal-debug-on>
```

Command Syntax

```
debug ethernet cfm (events|rx|tx|loopback|traceroute|all)
```

no debug ethernet cfm (events|rx|tx|loopback|traceroute|all)

Attribute Name: terminal-debug-options

Attribute Type: bits (events|rx|tx|loopback|traceroute|all)

Netconf RPC payload

```
<cfm-terminal-debug-off xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-cfm">
  <terminal-debug-options>events</terminal-debug-options>
</cfm-terminal-debug-off>
```

Command Syntax

```
no debug ethernet cfm (events|rx|tx|loopback|traceroute|all)
```

clear ethernet cfm traceroute-cache

Netconf RPC payload

```
<cfm-l2-clear-linktrace-cache xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-cfm"/>
```

Command Syntax

```
clear ethernet cfm traceroute-cache
```

IPI-CFM-Y1731

Configure enable status

This attribute specifies whether ETH-AIS transmission is enabled

Attribute Name: enable-status

Attribute Type: uint8

Attribute Name: client-md-level

Attribute Type: uint8

Attribute Range: 0-7

Netconf edit-config payload

```
<cfm xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-cfm">
  <maintenance-domains>
    <maintenance-domain>
      <md-name>DOMAIN_NAME</md-name>
      <config>
        <md-name>DOMAIN_NAME</md-name>
      </config>
      <maintenance-associations>
        <maintenance-association>
          <ma-name>MA_NAME</ma-name>
          <config>
            <ma-name>MA_NAME</ma-name>
          </config>
          <maintenance-end-points>
            <maintenance-end-point>
              <mep-id>1</mep-id>
              <config>
                <mep-id>1</mep-id>
              </config>
              <ethernet-alarm-indication-signal>
                <config>
                  <client-md-level>0</client-md-level>
                  </enable-status>
                </config>
              </ethernet-alarm-indication-signal>
            </maintenance-end-point>
          </maintenance-end-points>
        </maintenance-association>
      </maintenance-associations>
    </maintenance-domain>
  </maintenance-domains>
</cfm>
```

Command Syntax

```
ais status enable level <0-7>
```

Configure interval

This attribute specifies the ETH-AIS transmission period

This command is supported when following feature are enabled CFM Y1731 feature

Attribute Name: interval

Attribute Type: enum (1s|1min)

Default Value: 1s

Netconf edit-config payload

```
<cfm xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-cfm">
<maintenance-domains>
  <maintenance-domain>
    <md-name>DOMAIN_NAME</md-name>
    <config>
      <md-name>DOMAIN_NAME</md-name>
    </config>
    <maintenance-associations>
      <maintenance-association>
        <ma-name>MA_NAME</ma-name>
        <config>
          <ma-name>MA_NAME</ma-name>
        </config>
        <maintenance-end-points>
          <maintenance-end-point>
            <mep-id>1</mep-id>
            <config>
              <mep-id>1</mep-id>
            </config>
            <ethernet-alarm-indication-signal>
              <config>
                <interval>1s</interval> <!-- operation="delete"-->
              </config>
            </ethernet-alarm-indication-signal>
          </maintenance-end-point>
        </maintenance-end-points>
      </maintenance-association>
    </maintenance-associations>
  </maintenance-domain>
</maintenance-domains>
</cfm>
```

Command Syntax

```
ais interval (1s|1min)
```

IPI-UDLD

Configure enable

Use this attribute to enable UDLD

Attribute Name: enable

Attribute Type: empty

Netconf edit-config payload

```
<udld xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-udld">
  <global>
    <config>
      </enable><!-- operation="delete"-->
    </config>
  </global>
</udld>
```

Command Syntax

```
udld enable
```

Configure message time

Use this attribute to set UDLD message interval value

Attribute Name: message-time

Attribute Type: uint8

Attribute Range: 7-90

Netconf edit-config payload

```
<udld xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-udld">
  <global>
    <config>
      <message-time>7</message-time> <!-- operation="delete"-->
    </config>
  </global>
</udld>
```

Command Syntax

```
udld message-time <7-90>
```

Configure options

Use this attribute to enable or disable UDLD debugging at various levels

Attribute Name: options

Attribute Type: bits (event|packet|timer|nsm|hal|all)

Netconf edit-config payload

```
<udld xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-udld">
  <debug>
    <config>
      <options>event</options> <!-- operation="delete"-->
    </config>
  </debug>
</udld>
```

Command Syntax

```
debug udld (event|packet|timer|nsm|hal|all)
```

Configure mode

Use this attribute to configure UDLD mode for an interface

Attribute Name: mode

Attribute Type: enum (normal|aggressive)

Netconf edit-config payload

```
<udld xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-udld">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      <mode>normal</mode> <!-- operation="delete"-->
    </interface>
  </interfaces>
</udld>
```

Command Syntax

```
udld mode (normal|aggressive)
```

Configure administrative state

Use this attribute configure UDLD administrative state for an interface

Attribute Name: administrative-state

Attribute Type: enum (disable|enable)

Netconf edit-config payload

```
<udld xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-udld">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
    </interface>
  </interfaces>
</udld>
```

```

    <administrative-state>disable</administrative-state> <!-- operation="delete"-->
  </interface>
</interfaces>
</udld>

```

Command Syntax

```
udld state (disable|enable)
```

debug udld (event|packet|timer|nsm|hal|all)

Attribute Name: terminal-debug-options

Attribute Type: bits (event|packet|timer|nsm|hal|all)

Netconf RPC payload

```

<udld-terminal-debug-on xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-udld">
  <terminal-debug-options>event</terminal-debug-options>
</udld-terminal-debug-on>

```

Command Syntax

```
debug udld (event|packet|timer|nsm|hal|all)
```

no debug udld (event|packet|timer|nsm|hal|all)

Attribute Name: terminal-debug-options

Attribute Type: bits (event|packet|timer|nsm|hal|all)

Netconf RPC payload

```

<udld-terminal-debug-off xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-udld">
  <terminal-debug-options>event</terminal-debug-options>
</udld-terminal-debug-off>

```

Command Syntax

```
no debug udld (event|packet|timer|nsm|hal|all)
```

IPI-EFM

Configure link monitor off

Ethernet OAM link monitoring on the interface

Attribute Name: link-monitor-off

Attribute Type: uint8

Netconf edit-config payload

```

<ethernet-oam xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-efm">
  <interfaces>
    <interface>

```

```
<name>WORD</name>
<config>
  <name>WORD</name>
</config>
</link-monitor-off><!-- operation="delete"-->
</interface>
</interfaces>
</ethernet-oam>
```

Command Syntax

```
no ethernet oam link-monitor on
```

Configure remote loopback start

Ethernet OAM remote loopback trigger on interface

Attribute Name: remote-loopback-start

Attribute Type: uint8

Netconf edit-config payload

```
<ethernet-oam xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-efm">
<interfaces>
<interface>
  <name>WORD</name>
  <config>
    <name>WORD</name>
  </config>
  </remote-loopback-start><!-- operation="delete"-->
</interface>
</interfaces>
</ethernet-oam>
```

Command Syntax

```
ethernet oam remote-loopback start
```

Configure enable

Enable Ethernet OAM on the interface

Attribute Name: enable

Attribute Type: empty

Netconf edit-config payload

```
<ethernet-oam xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-efm">
<interfaces>
<interface>
  <name>WORD</name>
  <config>
    <name>WORD</name>
  </config>
</interface>
```

```
    </enable><!-- operation="delete"-->
</interface>
</interfaces>
</ethernet-oam>
```

Command Syntax

```
ethernet oam enable
```

Configure mode

Ethernet OAM mode on the interface

Attribute Name: mode

Attribute Type: enum (active|passive)

Netconf edit-config payload

```
<ethernet-oam xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-efm">
<interfaces>
<interface>
    <name>WORD</name>
    <config>
        <name>WORD</name>
    </config>
    <mode>active</mode> <!-- operation="delete"-->
</interface>
</interfaces>
</ethernet-oam>
```

Command Syntax

```
ethernet oam mode (active|passive)
```

Configure link lost timeout

Ethernet OAM link lost timer related configs

Attribute Name: link-lost-timeout

Attribute Type: uint8

Attribute Range: 2-30

Netconf edit-config payload

```
<ethernet-oam xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-efm">
<interfaces>
<interface>
    <name>WORD</name>
    <config>
        <name>WORD</name>
    </config>
    <link-lost-timeout>2</link-lost-timeout> <!-- operation="delete"-->
</interface>
```

```
</interfaces>
</ethernet-oam>
```

Command Syntax

```
ethernet oam timeout <2-30>
```

Configure pdu min rate

OAMPDU minimum rate per second

Attribute Name: pdu-min-rate

Attribute Type: uint8

Attribute Range: 1-10

Netconf edit-config payload

```
<ethernet-oam xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-efm">
<interfaces>
<interface>
  <name>WORD</name>
  <config>
    <name>WORD</name>
  </config>
  <pdu-min-rate>1</pdu-min-rate> <!-- operation="delete"-->
</interface>
</interfaces>
</ethernet-oam>
```

Command Syntax

```
ethernet oam min-rate <1-10>
```

Configure pdu max rate

OAMPDU maximum rate per second

Attribute Name: pdu-max-rate

Attribute Type: uint8

Attribute Range: 1-10

Netconf edit-config payload

```
<ethernet-oam xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-efm">
<interfaces>
<interface>
  <name>WORD</name>
  <config>
    <name>WORD</name>
  </config>
  <pdu-max-rate>1</pdu-max-rate> <!-- operation="delete"-->
</interface>
</interfaces>
```

```
</ethernet-oam>
```

Command Syntax

```
ethernet oam max-rate <1-10>
```

Configure unidirectional link support

Ethernet OAM unidirectional link support on the interface

Attribute Name: unidirectional-link-support

Attribute Type: empty

Netconf edit-config payload

```
<ethernet-oam xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-efm">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      </unidirectional-link-support><!-- operation="delete"-->
    </interface>
  </interfaces>
</ethernet-oam>
```

Command Syntax

```
ethernet oam unidirectional-link supported
```

Configure remote loopback support

Ethernet OAM remote loopback support on the interface

Attribute Name: remote-loopback-support

Attribute Type: empty

Netconf edit-config payload

```
<ethernet-oam xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-efm">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      </remote-loopback-support><!-- operation="delete"-->
    </interface>
  </interfaces>
</ethernet-oam>
```

Command Syntax

```
ethernet oam remote-loopback supported
```

Configure remote loopback timeout

Ethernet OAM remote loopback timeout on the interface

Attribute Name: remote-loopback-timeout

Attribute Type: uint8

Attribute Range: 1-10

Netconf edit-config payload

```
<ethernet-oam xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-efm">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      <remote-loopback-timeout>1</remote-loopback-timeout> <!-- operation="delete"-->
    </interface>
  </interfaces>
</ethernet-oam>
```

Command Syntax

```
ethernet oam remote-loopback timeout <1-10>
```

Configure link monitor support

Ethernet OAM link monitor support on the interface

Attribute Name: link-monitor-support

Attribute Type: empty

Netconf edit-config payload

```
<ethernet-oam xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-efm">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      </link-monitor-support><!-- operation="delete"-->
    </interface>
  </interfaces>
</ethernet-oam>
```

Command Syntax

```
ethernet oam link-monitor supported
```

Configure link monitor event log size

Ethernet OAM maximum event log entries on interface

Attribute Name: link-monitor-event-log-size

Attribute Type: uint8

Attribute Range: 1-100

Netconf edit-config payload

```
<ethernet-oam xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-efm">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      <link-monitor-event-log-size>1</link-monitor-event-log-size> <!--
operation="delete"-->
    </interface>
  </interfaces>
</ethernet-oam>
```

Command Syntax

```
ethernet oam link-monitor event-log-size <1-100>
```

Configure disable port on remote failure events

Ethernet OAM remote failure action on interface

Attribute Name: disable-port-on-remote-failure-events

Attribute Type: bits (dying-gasp|link-fault|critical-event)

Netconf edit-config payload

```
<ethernet-oam xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-efm">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      <disable-port-on-remote-failure-events>dying-gasp</disable-port-on-remote-
failure-events> <!-- operation="delete"-->
    </interface>
  </interfaces>
</ethernet-oam>
```

Command Syntax

```
ethernet oam remote-failure {dying-gasp|link-fault|critical-event} action error-
  disable-interface
```

Configure options

Debugging enable configuration for Ethernet OAM

Attribute Name: options

Attribute Type: bits (event|rx|tx|all)

Netconf edit-config payload

```
<ethernet-oam xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-efm">
  <debug>
    <config>
      <options>event</options> <!-- operation="delete"-->
    </config>
  </debug>
</ethernet-oam>
```

Command Syntax

```
debug ethernet oam (event|rx|tx|all)
```

debug ethernet oam (event|rx|tx|all)

Attribute Name: terminal-debug-status

Attribute Type: bits (event|rx|tx|all)

Netconf RPC payload

```
<efm-terminal-debug-on xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-efm">
  <terminal-debug-status>event</terminal-debug-status>
</efm-terminal-debug-on>
```

Command Syntax

```
debug ethernet oam (event|rx|tx|all)
```

no debug ethernet oam (event|rx|tx|all)

Attribute Name: terminal-debug-status

Attribute Type: bits (event|rx|tx|all)

Netconf RPC payload

```
<efm-terminal-debug-off xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-efm">
  <terminal-debug-status>event</terminal-debug-status>
</efm-terminal-debug-off>
```

Command Syntax

```
no debug ethernet oam (event|rx|tx|all)
```

clear ethernet oam statistics interface IFNAME

Attribute Name: name

Attribute Type: string

Netconf RPC payload

```
<clear-interface-oam-counters xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-efm">
  <name>IFNAME</name>
</clear-interface-oam-counters>
```

Command Syntax

```
clear ethernet oam statistics interface IFNAME
```

IPI-EVPN-MPLS

Configure enable evpn mpls

Use this attribute to enable EVPN-MPLS module. Without this attribute evpn mpls functionality can not be achieved

Attribute Name: enable-evpn-mpls

Attribute Type: empty

Netconf edit-config payload

```
<evpn-mpls xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-evpn-mpls">
  <global>
    <config>
      </enable-evpn-mpls>
    </config>
  </global>
</evpn-mpls>
```

Command Syntax

```
evpn mpls enable
```

Configure vtep ipv4

Use this attribute to set source vtep global ip address. This will be treated at evpn mpls tunnel source address

Attribute Name: vtep-ipv4

Attribute Type: inet:ipv4-address

Netconf edit-config payload

```
<evpn-mpls xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-evpn-mpls">
  <global>
    <config>
      <vtep-ipv4>A.B.C.D</vtep-ipv4> <!-- operation="delete"-->
    </config>
  </global>
</evpn-mpls>
```

Command Syntax

```
evpn mpls vtep-ip-global A.B.C.D
```

Configure mac ageing timer

Use this attribute to set the time till a learned mac address will persist after last update

Attribute Name: mac-ageing-timer

Attribute Type: uint32

Attribute Range: 10-572

Netconf edit-config payload

```
<evpn-mpls xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-evpn-mpls">
  <global>
    <config>
      <mac-ageing-timer>10</mac-ageing-timer> <!-- operation="delete"-->
    </config>
  </global>
</evpn-mpls>
```

Command Syntax

```
evpn mpls mac-ageing-time <10-572>
```

Configure arp nd refresh time

Use this attribute to configure aging out the arp-cache and nd-cache entries

Attribute Name: arp-nd-refresh-time

Attribute Type: uint32

Attribute Range: 3-190

Netconf edit-config payload

```
<evpn-mpls xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-evpn-mpls">
  <arp-nd-global>
    <config>
      <arp-nd-refresh-time>3</arp-nd-refresh-time> <!-- operation="delete"-->
    </config>
  </arp-nd-global>
</evpn-mpls>
```

Command Syntax

```
evpn mpls arp-nd refresh-timer <3-190>
```

Configure tenant identifier

Tenant Identifier

Attribute Name: tenant-identifier

Attribute Type: uint32

Attribute Range: 1-16777215

Netconf edit-config payload

```
<evpn-mpls xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-evpn-mpls">
  <mpls-tenants>
    <mpls-tenant> <!-- operation="delete"-->
      <tenant-identifier>1</tenant-identifier>
      <config>
        <tenant-identifier>1</tenant-identifier>
      </config>
    </mpls-tenant>
  </mpls-tenants>
</evpn-mpls>
```

Command Syntax

```
evpn mpls id <1-16777215>
```

Configure tenant identifier

Tenant Identifier

Attribute Name: tenant-identifier

Attribute Type: uint32

Attribute Range: 1-16777215

Attribute Name: control-word

Attribute Type: uint8

Netconf edit-config payload

```
<evpn-mpls xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-evpn-mpls">
  <mpls-tenants>
    <mpls-tenant>
      <tenant-identifier>1</tenant-identifier>
      <config>
        <tenant-identifier>1</tenant-identifier>
        </control-word>
      </config>
    </mpls-tenant>
  </mpls-tenants>
</evpn-mpls>
```

Command Syntax

```
evpn mpls id <1-16777215> control-word
```

Configure vrf name

Use this attribute to map vrf to carry EVPN routes

Attribute Name: vrf-name

Attribute Type: string

Attribute Range: 1-32

Netconf edit-config payload

```
<evpn-mpls xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-evpn-mpls">
  <mpls-tenants>
    <mpls-tenant>
      <tenant-identifier>1</tenant-identifier>
      <config>
        <tenant-identifier>1</tenant-identifier>
      </config>
      <vrf-name>VRF-NAME</vrf-name> <!-- operation="delete"-->
    </mpls-tenant>
  </mpls-tenants>
</evpn-mpls>
```

Command Syntax

```
host-reachability-protocol evpn-bgp VRF-NAME
```

Configure mac holdtime

Use this attribute to set the time a host mac entry will persist after unconfig

Attribute Name: mac-holdtime

Attribute Type: int32

Default Value: 0

Attribute Range: -1-300

Netconf edit-config payload

```
<evpn-mpls xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-evpn-mpls">
  <mpls-tenants>
    <mpls-tenant>
      <tenant-identifier>1</tenant-identifier>
      <config>
        <tenant-identifier>1</tenant-identifier>
        <mac-holdtime>-1</mac-holdtime> <!-- operation="delete"-->
      </config>
    </mpls-tenant>
  </mpls-tenants>
</evpn-mpls>
```

Command Syntax

```
mac-holdtime <-1-300>
```

Configure tenant description

Use this attribute to set evpn-mpls tenant identifier name

Attribute Name: tenant-description

Attribute Type: string

Netconf edit-config payload

```
<evpn-mpls xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-evpn-mpls">
  <mpls-tenants>
    <mpls-tenant>
      <tenant-identifier>1</tenant-identifier>
      <config>
        <tenant-identifier>1</tenant-identifier>
      </config>
      <tenant-description>WORD</tenant-description> <!-- operation="delete"-->
    </mpls-tenant>
  </mpls-tenants>
</evpn-mpls>
```

Command Syntax

```
evi-name WORD
```

Configure irb name

Use this attribute to provide default gateway behavior on a VTEP for particular VNID.

Attribute Name: irb-name

Attribute Type: string

Netconf edit-config payload

```
<evpn-mpls xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-evpn-mpls">
  <mpls-tenants>
    <mpls-tenant>
      <tenant-identifier>1</tenant-identifier>
      <config>
        <tenant-identifier>1</tenant-identifier>
      </config>
      <irb-name>NAME</irb-name> <!-- operation="delete"-->
    </mpls-tenant>
  </mpls-tenants>
</evpn-mpls>
```

Command Syntax

```
evpn irb NAME
```

Configure irb advertise host route

Use this attribute to set advertise host to route

Attribute Name: irb-advertise-host-route

Attribute Type: empty

Netconf edit-config payload

```
<evpn-mpls xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-evpn-mpls">
  <mpls-tenants>
    <mpls-tenant>
```

```
<tenant-identifier>1</tenant-identifier>
<config>
  <tenant-identifier>1</tenant-identifier>
</config>
<irb>
<config>
  </irb-advertise-host-route><!-- operation="delete"-->
</config>
</irb>
</mpls-tenant>
</mpls-tenants>
</evpn-mpls>
```

Command Syntax

```
evpn irb-advertise-host-route
```

IPI-ROLE-BASED-ACCESS-CONTROL

Configure policy name

Use this attribute to create a TACACS+ Role-Based Authorization (RBAC) policy and enter RBAC policy mode.

Attribute Name: policy-name

Attribute Type: string

Attribute Range: 2-16

Netconf edit-config payload

```
<role-based-access-control xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-role-
based-access-control">
  <policies>
    <policy> <!-- operation="delete"-->
      <policy-name>POLICY-NAME</policy-name>
      <config>
        <policy-name>POLICY-NAME</policy-name>
      </config>
    </policy>
  </policies>
</role-based-access-control>
```

Command Syntax

```
policy POLICY-NAME
```

Configure command mode

Attribute to specify the mode in which CLI should be allowed/denied. Command prompt string such as 'config-router' or 'config-if', deny/Permit access to the command only in this mode.

Attribute Name: command-mode

Attribute Type: string

Attribute Name: rule-type

Attribute Type: enum (deny|permit)

Netconf edit-config payload

```
<role-based-access-control xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-role-
based-access-control">
  <policies>
    <policy>
      <policy-name>POLICY-NAME</policy-name>
      <config>
        <policy-name>POLICY-NAME</policy-name>
      </config>
    </policy>
  </policies>
  <rules>
    <rule>
      <rule-name>RULE-STRING</rule-name>
      <config>
        <rule-name>RULE-STRING</rule-name>
        <rule-type>deny</rule-type> <!-- operation="delete"-->
      </config>
      <command-mode>MODE-NAME</command-mode> <!-- operation="delete"-->
    </rule>
  </rules>
</role-based-access-control>
```

Command Syntax

```
(deny|permit) RULE-STRING mode MODE-NAME
```

Configure rule name

This attribute specifies rule string configured as regex-expression for cli authorization

Attribute Name: rule-name

Attribute Type: string

Attribute Range: 3-255

Attribute Name: rule-type

Attribute Type: enum (deny|permit)

Netconf edit-config payload

```
<role-based-access-control xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-role-
based-access-control">
  <policies>
    <policy>
      <policy-name>POLICY-NAME</policy-name>
      <config>
        <policy-name>POLICY-NAME</policy-name>
      </config>
    </policy>
  </policies>
</role-based-access-control>
```

```
<rules>
<rule>
  <rule-name>RULE-STRING</rule-name>
  <config>
    <rule-name>RULE-STRING</rule-name>
    <rule-type>deny</rule-type>
  </config>
</rule>
</rules>
</policy>
</policies>
</role-based-access-control>
```

Command Syntax

(deny|permit) RULE-STRING

Configure command mode

Attribute to specify the mode in which CLI should be allowed/denied. Command prompt string such as 'config-router' or 'config-if', deny/Permit access to the command only in this mode.

Attribute Name: command-mode

Attribute Type: string

Attribute Name: rule-type

Attribute Type: enum (deny|permit)

Netconf edit-config payload

```
<role-based-access-control xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-role-
based-access-control">
  <policies>
    <policy>
      <policy-name>POLICY-NAME</policy-name>
      <config>
        <policy-name>POLICY-NAME</policy-name>
      </config>
    </policy>
  </policies>
  <rules>
    <rule>
      <rule-name>RULE-STRING</rule-name>
      <config>
        <rule-name>RULE-STRING</rule-name>
        <rule-type>deny</rule-type>
      </config>
      <command-mode>MODE-NAME</command-mode>
    </rule>
  </rules>
</role-based-access-control>
```

Command Syntax

```
(deny|permit) RULE-STRING mode MODE-NAME
```

Configure role name

Use this attribute to create a TACACS+ Role-Based Authorization (RBAC) role and to switch to RBAC role mode. End-user cannot specify one of these roles already defined in OcNOS: network-admin network-user network-operator network-engineer For more about these built-in roles, see 'username' CLI configuration

Attribute Name: role-name

Attribute Type: string

Attribute Range: 2-16

Netconf edit-config payload

```
<role-based-access-control xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-role-based-access-control">
  <roles>
    <role> <!-- operation="delete"-->
      <role-name>ROLE-NAME</role-name>
      <config>
        <role-name>ROLE-NAME</role-name>
      </config>
    </role>
  </roles>
</role-based-access-control>
```

Command Syntax

```
role ROLE-NAME
```

Configure default policy

Use this attribute to set the default rule for a TACACS+ Role-Based Access Control (RBAC) role.

Attribute Name: default-policy

Attribute Type: enum (deny-all|permit-all)

Default Value: deny-all

Netconf edit-config payload

```
<role-based-access-control xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-role-based-access-control">
  <roles>
    <role>
      <role-name>ROLE-NAME</role-name>
      <config>
        <role-name>ROLE-NAME</role-name>
      </config>
      <default-policy>deny-all</default-policy> <!-- operation="delete"-->
    </role>
  </roles>
```

```
</role-based-access-control>
```

Command Syntax

```
default (deny-all|permit-all)
```

Configure policy name

Use this attribute to add a policy to a TACACS+ Role-based Access Control (RBAC) role

Attribute Name: policy-name

Attribute Type: string

Attribute Range: 2-16

Netconf edit-config payload

```
<role-based-access-control xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-role-based-access-control">
  <roles>
    <role>
      <role-name>ROLE-NAME</role-name>
      <config>
        <role-name>ROLE-NAME</role-name>
      </config>
    </role>
  </roles>
  <policies>
    <policy> <!-- operation="delete"-->
      <policy-name>POLICY-NAME</policy-name>
      <config>
        <policy-name>POLICY-NAME</policy-name>
      </config>
    </policy>
  </policies>
</role-based-access-control>
```

Command Syntax

```
add policy POLICY-NAME
```

Configure enable

Enable or disable the TACAS+ Role-Based Access Control of RBAC feature

Attribute Name: enable

Attribute Type: empty

Netconf edit-config payload

```
<role-based-access-control xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-role-based-access-control">
  <config>
    </enable><!-- operation="delete"-->
  </config>
```

```
</role-based-access-control>
```

Command Syntax

```
feature dynamic-rbac
```

IPI-PORT-BREAKOUT

Configure port number

Use this attribute to set the port number associated with this instance

This command is supported when following feature are disabled DUNE feature

Attribute Name: port-number

Attribute Type: uint8

Attribute Range: 1-128

Attribute Name: mode

Attribute Type: enum (4X10g|4X25g|2X50g)

Netconf edit-config payload

```
<port-breakout xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-port-breakout">
  <breakouts>
    <breakout> <!-- operation="delete"-->
      <port-number>1</port-number>
    <config>
      <port-number>0</port-number>
      <mode>4X10g</mode>
    </config>
  </breakout>
</breakouts>
</port-breakout>
```

Command Syntax

```
port <1-128> breakout (4X10g|4X25g|2X50g)
```

Configure port group

Use this attribute to set the port group associated with this instance

This command is supported when following feature are disabled DUNE feature

Attribute Name: port-group

Attribute Type: uint8

Attribute Range: 1-64

Attribute Name: speed

Attribute Type: enum (10g)

Netconf edit-config payload

```
<port-breakout xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-port-breakout">
  <groups-speed>
    <group-speed> <!-- operation="delete"-->
      <port-group>1</port-group>
      <config>
        <port-group>0</port-group>
        <speed>10g</speed>
      </config>
    </group-speed>
  </groups-speed>
</port-breakout>
```

Command Syntax

```
port-group <1-64> speed (10g)
```

Configure mode

Use this attribute to configure Port-breakout mode for an interface

Attribute Name: mode

Attribute Type: enum (4X10g|4X25g|2X50g)

Netconf edit-config payload

```
<port-breakout xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-port-breakout">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      <mode>4X10g</mode> <!-- operation="delete"-->
    </interface>
  </interfaces>
</port-breakout>
```

Command Syntax

```
port breakout enable (4X10g|4X25g|2X50g)
```

Configure if name

Name of the interface to breakout

Attribute Name: if-name

Attribute Type: string

Attribute Name: mode

Attribute Type: enum (4X10g|4X25g|2X50g)

Netconf edit-config payload

```

<port-breakout xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-port-breakout">
<breakouts-dune>
<breakout-dune> <!-- operation="delete"-->
  <if-name>IFNAME</if-name>
  <config>
    <if-name>WORD</if-name>
    <mode>4X10g</mode>
  </config>
</breakout-dune>
</breakouts-dune>
</port-breakout>

```

Command Syntax

```
port IFNAME breakout (4X10g|4X25g|2X50g)
```

IPI-SOURCE-INTERFACE

Configure protocol type

Protocol type to apply the source-interface.

This command is supported when following feature are enabled hostp feature

Attribute Name: protocol-type

Attribute Type: enum (tacacs+|ntp|snmp|syslog|radius)

Attribute Name: port-number

Attribute Type: union

Attribute Name: vrf-name

Attribute Type: string

Netconf edit-config payload

```

<source-interface xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-source-
interface">
<address-family-ipv4>
<source-nat-mappings>
<source-nat-mapping> <!-- operation="delete"-->
  <protocol-type>tacacs+</protocol-type>
  <config>
    <protocol-type>tacacs+</protocol-type>
    <interface-name>WORD</interface-name>
    <port-number>0</port-number>
    <vrf-name>VRF_NAME</vrf-name>
  </config>
  <interface-name>IFNAME</interface-name>
</source-nat-mapping>
</source-nat-mappings>

```

```
</address-family-ipv4>
</source-interface>
```

Command Syntax

```
ip source-interface IFNAME (tacacs+|ntp|snmp|syslog|radius) (port (0|<1025-
65535>)|) (vrf VRF_NAME|)
```

Configure protocol type

Protocol type to apply the source-interface.

This command is supported when following feature are enabled IPV6 feature, hostp feature

Attribute Name: protocol-type

Attribute Type: enum (tacacs+|ntp|snmp|syslog|radius)

Attribute Name: port-number

Attribute Type: union

Attribute Name: vrf-name

Attribute Type: string

Netconf edit-config payload

```
<source-interface xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-source-
interface">
  <address-family-ipv6>
  <source-nat-mappings>
  <source-nat-mapping> <!-- operation="delete"-->
    <protocol-type>tacacs+</protocol-type>
    <config>
      <protocol-type>tacacs+</protocol-type>
      <interface-name>WORD</interface-name>
      <port-number>0</port-number>
      <vrf-name>VRF_NAME</vrf-name>
    </config>
    <interface-name>IFNAME</interface-name>
  </source-nat-mapping>
</source-nat-mappings>
</address-family-ipv6>
</source-interface>
```

Command Syntax

```
ipv6 source-interface IFNAME (tacacs+|ntp|snmp|syslog|radius) (port (0|<1025-
65535>)|) (vrf VRF_NAME|)
```

IPI-TACACS

Configure feature enable

Use this attribute to enable the TACACS+ feature

Attribute Name: feature-enable

Attribute Type: empty

Netconf edit-config payload

```
<tacacs xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-tacacs">
  <vrfs>
    <vrf>
      <vrf-name>management</vrf-name>
      <config>
        <vrf-name>management</vrf-name>
        </config>
        </feature-enable>
      </vrf>
    </vrfs>
  </tacacs>
```

Command Syntax

```
feature tacacs+ (vrf management|)
```

Configure vrf name

VRF Name associated with this instance

Attribute Name: vrf-name

Attribute Type: string

Attribute Name: key-type

Attribute Type: enum (0|7)

Attribute Name: secret-key-string

Attribute Type: string

Netconf edit-config payload

```
<tacacs xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-tacacs">
  <vrfs>
    <vrf>
      <vrf-name>management</vrf-name>
      <config>
        <vrf-name>management</vrf-name>
        <key-type>0</key-type>
        <secret-key-string>WORD</secret-key-string>
      </config>
    </vrf>
  </vrfs>
</tacacs>
```

```
</vrf>
</vrfs>
</tacacs>
```

Command Syntax

```
tacacs-server login key (0|7) WORD (vrf management|)
```

Configure vrf name

VRF Name associated with this instance

Attribute Name: vrf-name

Attribute Type: string

Attribute Name: key-type

Attribute Type: enum (0|7)

Attribute Name: secret-key-string

Attribute Type: string

Netconf edit-config payload

```
<tacacs xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-tacacs">
  <vrfs>
    <vrf>
      <vrf-name>management</vrf-name>
      <config>
        <vrf-name>management</vrf-name>
        <key-type>0</key-type>
        <secret-key-string>WORD</secret-key-string>
      </config>
    </vrf>
  </vrfs>
</tacacs>
```

Command Syntax

```
tacacs-server login key (0|7) WORD (vrf management|)
```

Configure vrf name

VRF Name associated with this instance

This command is supported when following feature are enabled hostp feature,aaa feature,tacacs-client feature

Attribute Name: vrf-name

Attribute Type: string

Attribute Name: timeout

Attribute Type: uint8

Default Value: 5

Attribute Range: 1-60

Netconf edit-config payload

```
<tacacs xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-tacacs">
<vrfs>
<vrf>
  <vrf-name>management</vrf-name>
  <config>
    <vrf-name>management</vrf-name>
    <timeout>1</timeout> <!-- operation="delete"-->
  </config>
</vrf>
</vrfs>
</tacacs>
```

Command Syntax

```
tacacs-server login timeout <1-60> (vrf management|)
```

Configure host address

Use this attribute to set the TACACS+ server host name or IP address

Attribute Name: host-address

Attribute Type: union

Attribute Range: 1-63

Attribute Name: sequence-number

Attribute Type: uint8

Attribute Range: 1-8

Netconf edit-config payload

```
<tacacs xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-tacacs">
<vrfs>
<vrf>
  <vrf-name>management</vrf-name>
  <config>
    <vrf-name>management</vrf-name>
  </config>
<remote-servers>
<server> <!-- operation="delete"-->
  <host-address>A.B.C.D</host-address>
  <config>
    <host-address>A.B.C.D</host-address>
    <sequence-number>1</sequence-number>
  </config>
</server>
</remote-servers>
</vrf>
</vrfs>
</tacacs>
```

Command Syntax

```
tacacs-server login host (A.B.C.D|X:X::X:X|HOSTNAME) (vrf management|) seq-num <1-8>
```

Configure secret key string

Shared key used between the authentication-server and the device

Attribute Name: secret-key-string

Attribute Type: string

Attribute Name: sequence-number

Attribute Type: uint8

Attribute Range: 1-8

Attribute Name: key-type

Attribute Type: enum (0|7)

Netconf edit-config payload

```
<tacacs xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-tacacs">
  <vrfs>
    <vrf>
      <vrf-name>management</vrf-name>
      <config>
        <vrf-name>management</vrf-name>
      </config>
    </vrf>
  </vrfs>
  <remote-servers>
    <server>
      <host-address>A.B.C.D</host-address>
      <config>
        <host-address>A.B.C.D</host-address>
        <sequence-number>1</sequence-number> <!-- operation="delete"-->
        <key-type>0</key-type> <!-- operation="delete"-->
      </config>
      <secret-key-string>WORD</secret-key-string> <!-- operation="delete"-->
    </server>
  </remote-servers>
</tacacs>
```

Command Syntax

```
tacacs-server login host (A.B.C.D|X:X::X:X|HOSTNAME) (vrf management|) seq-num <1-8> key (0|7) WORD
```

Configure port

Port number used for TACACS+ Server Connection

Attribute Name: port

Attribute Type: uint32

Attribute Range: 1025-65535

Attribute Name: sequence-number

Attribute Type: uint8

Attribute Range: 1-8

Netconf edit-config payload

```
<tacacs xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-tacacs">
<vrfs>
<vrf>
  <vrf-name>management</vrf-name>
  <config>
    <vrf-name>management</vrf-name>
  </config>
<remote-servers>
<server>
  <host-address>A.B.C.D</host-address>
  <config>
    <host-address>A.B.C.D</host-address>
    <sequence-number>1</sequence-number> <!-- operation="delete"-->
  </config>
  <port>1025</port> <!-- operation="delete"-->
</server>
</remote-servers>
</vrf>
</vrfs>
</tacacs>
```

Command Syntax

```
tacacs-server login host (A.B.C.D|X:X::X:X|HOSTNAME) (vrf management|) seq-num <1-8> port <1025-65535>
```

Configure timeout

To represent the timeout configured by the user

Attribute Name: timeout

Attribute Type: uint32

Default Value: 5

Attribute Range: 1-60

Attribute Name: sequence-number

Attribute Type: uint8

Attribute Range: 1-8

Netconf edit-config payload

```
<tacacs xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-tacacs">
<vrfs>
```

```
<vrf>
  <vrf-name>management</vrf-name>
  <config>
    <vrf-name>management</vrf-name>
  </config>
</remote-servers>

  </config>
  <timeout>1</timeout> <!-- operation="delete"-->
</server>
</remote-servers>
</vrf>
</vrfs>
</tacacs>
```

Command Syntax

```
tacacs-server login host (A.B.C.D|X:X::X:X|HOSTNAME) (vrf management|) seq-num <1-8> timeout <1-60>
```

Configure timeout

To represent the timeout configured by the user

Attribute Name: timeout

Attribute Type: uint32

Default Value: 5

Attribute Range: 1-60

Attribute Name: sequence-number

Attribute Type: uint8

Attribute Range: 1-8

Attribute Name: port

Attribute Type: uint32

Attribute Range: 1025-65535

Netconf edit-config payload

```
<tacacs xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-tacacs">
  <vrfs>
    <vrf>

</server>
</remote-servers>
</vrf>
</vrfs>
</tacacs>

```

Command Syntax

```

tacacs-server login host (A.B.C.D|X:X::X:X|HOSTNAME) (vrf management|) seq-num <1-
8> key (0|7) WORD port <1025-65535>

```

Configure timeout

To represent the timeout configured by the user

Attribute Name: timeout

Attribute Type: uint32

Default Value: 5

Attribute Range: 1-60

Attribute Name: sequence-number

Attribute Type: uint8

Attribute Range: 1-8

Attribute Name: key-type

Attribute Type: enum (0|7)

Attribute Name: secret-key-string

Attribute Type: string

Netconf edit-config payload

```

<tacacs xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-tacacs">

```

Configure enable

This attribute is to enable/disable TACACS+ debug logging

Attribute Name: enable

Attribute Type: empty

Netconf edit-config payload

```
<tacacs xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-tacacs">
<debug>
<config>
  </enable><!-- operation="delete"-->
</config>
</debug>
</tacacs>
```

Command Syntax

```
debug tacacs+
```

clear tacacs-server counters (vrf management|)

Attribute Name: vrf-name

Attribute Type: string

Netconf RPC payload

```
<clear-all-tacacs-server-counters xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-tacacs">
  <vrf-name>management</vrf-name>
</clear-all-tacacs-server-counters>
```

Command Syntax

```
clear tacacs-server counters (vrf management|)
```

clear tacacs-server (A.B.C.D|X:X::X:X|HOSTNAME) counters (vrf (management|all)|)

Attribute Name: hostname

Attribute Type: union

Attribute Name: vrf-name

Attribute Type: string

Netconf RPC payload

```
<clear-tacacs-server-host-counters xmlns="http://www.ipinfusion.com/yang/ocnos/
ipi-tacacs">
  <hostname>A.B.C.D</hostname>
  <vrf-name>management</vrf-name>
</clear-tacacs-server-host-counters>
```

Command Syntax

```
clear tacacs-server (A.B.C.D|X:X::X:X|HOSTNAME) counters (vrf (management|all)|)
```

debug tacacs+

Netconf RPC payload

```
<tacacs-terminal-debug-on xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-
tacacs"/>
```

Command Syntax

```
debug tacacs+
```

no debug tacacs+

Netconf RPC payload

```
<tacacs-terminal-debug-off xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-
tacacs"/>
```

Command Syntax

```
no debug tacacs+
```

IPI-TIME-RANGE

Configure name

Time range name to be configured

Attribute Name: name

Attribute Type: string

Attribute Range: 1-60

Netconf edit-config payload

```
<time-ranges xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-time-range">
  <time-range> <!-- operation="delete"-->
    <name>WORD</name>
    <config>
      <name>WORD</name>
    </config>
  </time-range>
</time-ranges>
```

Command Syntax

time-range WORD

Configure absolute start time

Start time hour and minute

Attribute Name: absolute-start-time

Attribute Type: string

Netconf edit-config payload

```
<time-ranges xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-time-range">
  <time-range>
    <name>WORD</name>
    <config>
      <name>WORD</name>
    </config>
  <start-time-options>
    <config>
      <absolute-start-time>TIME_RANGE_DATE_TIME_T</absolute-start-time>
    </config>
  </start-time-options>
</time-range>
</time-ranges>
```

Command Syntax

start-time HH:MM:SS <01-31> MONTH <1995-2035>

Configure relative start time

Configure the start-time of the time-range to be now or after sometime

Attribute Name: relative-start-time

Attribute Type: union

Netconf edit-config payload

```
<time-ranges xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-time-range">
  <time-range>
    <name>WORD</name>
  </config>
```

```

        <name>WORD</name>
    </config>
<start-time-options>
<config>
    <relative-start-time>TIME_RANGE_RELATIVE_TIME_T</relative-start-time>
</config>
</start-time-options>
</time-range>
</time-ranges>

```

Command Syntax

```
start-time (after (<1-129600>) | now)
```

Configure absolute end time

End time hour and minute

Attribute Name: absolute-end-time

Attribute Type: string

Netconf edit-config payload

```

<time-ranges xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-time-range">
<time-range>
    <name>WORD</name>
    <config>
        <name>WORD</name>
    </config>
</end-time-options>
<config>
    <absolute-end-time>TIME_RANGE_DATE_TIME_T</absolute-end-time>
</config>
</end-time-options>
</time-range>
</time-ranges>

```

Command Syntax

```
end-time HH:MM:SS <01-31> MONTH <1995-2035>
```

Configure relative end time

Relative time in minutes

Attribute Name: relative-end-time

Attribute Type: string

Netconf edit-config payload

```

<time-ranges xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-time-range">
<time-range>
    <name>WORD</name>
    <config>

```

```
        <name>WORD</name>
    </config>
</end-time-options>
<config>
    <relative-end-time>1</relative-end-time> <!-- operation="delete"-->
</config>
</end-time-options>
</time-range>
</time-ranges>
```

Command Syntax

end-time after <1-129600>

Configure frequency

Frequency (hourly, daily, weekly)

Attribute Name: frequency

Attribute Type: union

Netconf edit-config payload

```
<time-ranges xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-time-range">
  <time-range>
    <name>WORD</name>
    <config>
      <name>WORD</name>
    </config>
  <frequency-options>
    <config>
      <frequency>daily</frequency> <!-- operation="delete"-->
    </config>
  </frequency-options>
</time-range>
</time-ranges>
```

Command Syntax

frequency (daily|hourly|weekly|days WORD)

crypto pki generate rsa common-name ipv4 IPv4ADDR

Attribute Name: ipv4-addr

Attribute Type: inet:ipv4-address

Netconf RPC payload

```
<crypto-rsa-key-gen xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-crypto">
  <ipv4-addr>IPv4ADDR</ipv4-addr>
</crypto-rsa-key-gen>
```

Command Syntax

```
crypto pki generate rsa common-name ipv4 IPv4ADDR
```

IPI-IP-SLA

Configure identifier

Use this attribute to set the IPSLA.

Attribute Name: identifier

Attribute Type: uint16

Attribute Range: 1-65535

Netconf edit-config payload

```
<ip-sla xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ip-sla">
  <processes>
    <process> <!-- operation="delete"-->
      <identifier>1</identifier>
      <config>
        <identifier>1</identifier>
      </config>
    </process>
  </processes>
</ip-sla>
```

Command Syntax

```
ip sla <1-65535>
```

Configure host

Use this attribute to set the ICMP Echo host name or IP address.

Attribute Name: host

Attribute Type: union

Attribute Name: source-interface

Attribute Type: string

Netconf edit-config payload

```
<ip-sla xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ip-sla">
  <processes>
    <process>
      <identifier>1</identifier>
      <config>
        <identifier>1</identifier>
      </config>
    </process>
  </processes>
  <icmp-echo-processes>
    <icmp-echo-process> <!-- operation="delete"-->

```

```

    <host>IP_SLA_HOSTNAME_T</host>
  <config>
    <host>IP_SLA_HOSTNAME_T</host>
    <source-interface>IFNAME</source-interface>
  </config>
</icmp-echo-process>
</icmp-echo-processes>
</process>
</processes>
</ip-sla>

```

Command Syntax

```
icmp-echo (ipv4 A.B.C.D|ipv6 X:X::X:X|HOSTNAME) (source-interface IFNAME|)
```

Configure frequency

The frequency (interval) correlates to how often the ICMP packet is sent. The unit of this parameter is in seconds.

Attribute Name: frequency

Attribute Type: uint8

Attribute Range: 1-60

Netconf edit-config payload

```

<ip-sla xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ip-sla">
  <processes>
    <process>
      <identifier>1</identifier>
      <config>
        <identifier>1</identifier>
      </config>
    <icmp-echo-processes>
      <icmp-echo-process>
        <host>IP_SLA_HOSTNAME_T</host>
        <config>
          <host>IP_SLA_HOSTNAME_T</host>
        </config>
        <frequency>1</frequency> <!-- operation="delete"-->
      </icmp-echo-process>
    </icmp-echo-processes>
  </process>
</processes>
</ip-sla>

```

Command Syntax

```
frequency <1-60>
```

Configure timeout

The timeout value correlates to how long the Ping application will wait for the response after sending packets ICMP Echo packets.

Attribute Name: timeout

Attribute Type: uint16

Attribute Range: 1000-60000

Netconf edit-config payload

```
<ip-sla xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ip-sla">
  <processes>
    <process>
      <identifier>1</identifier>
      <config>
        <identifier>1</identifier>
      </config>
    <icmp-echo-processes>
    <icmp-echo-process>
      <host>IP_SLA_HOSTNAME_T</host>
      <config>
        <host>IP_SLA_HOSTNAME_T</host>
      </config>
      <timeout>1000</timeout> <!-- operation="delete"-->
    </icmp-echo-process>
  </icmp-echo-processes>
</process>
</processes>
</ip-sla>
```

Command Syntax

```
timeout <1000-60000>
```

Configure threshold

The threshold value correlates to the limit the administrator sets as what would be a successful test. Threshold can be configured in milli-seconds.

Attribute Name: threshold

Attribute Type: uint16

Attribute Range: 1000-60000

Netconf edit-config payload

```
<ip-sla xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ip-sla">
  <processes>
    <process>
      <identifier>1</identifier>
      <config>
        <identifier>1</identifier>
```

```
</config>
<icmp-echo-processes>
<icmp-echo-process>
  <host>IP_SLA_HOSTNAME_T</host>
  <config>
    <host>IP_SLA_HOSTNAME_T</host>
  </config>
  <threshold>1000</threshold> <!-- operation="delete"-->
</icmp-echo-process>
</icmp-echo-processes>
</process>
</processes>
</ip-sla>
```

Command Syntax

```
threshold <1000-60000>
```

Configure vrf name

VRF name

Attribute Name: vrf-name

Attribute Type: string

Netconf edit-config payload

```
<ip-sla xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ip-sla">
<scheduled-processes>
<scheduled-process>
  <time-range-name>WORD</time-range-name>
  <config>
    <time-range-name>WORD</time-range-name>
    <scheduled-pid>1</scheduled-pid>
  </config>
  <scheduled-pid>1</scheduled-pid>
  <vrf-name>NAME</vrf-name>
</scheduled-process>
</scheduled-processes>
</ip-sla>
```

Command Syntax

```
ip sla schedule <1-65535> time-range WORD (vrf NAME|)
```

clear ip sla statistics (<1-65535>|)

Attribute Name: identifier

Attribute Type: uint16

Attribute Range: 1-65535

Netconf RPC payload

```
<ip-sla-clear-statistics xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ip-sla">
  <identifier>1</identifier>
</ip-sla-clear-statistics>
```

Command Syntax

```
clear ip sla statistics (<1-65535>|)
```

IPI-OBJECT-TRACKING

Configure tracker id

Use this attribute for Object Tracking id.

Attribute Name: tracker-id

Attribute Type: uint16

Attribute Name: delay-up

Attribute Type: uint16

Attribute Range: 1-9999

Netconf edit-config payload

```
<object-tracking xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-object-tracking">
  <trackers>
    <tracker>
      <tracker-id>1</tracker-id>
      <config>
        <tracker-id>1</tracker-id>
        <delay-up>1</delay-up>
      </config>
    </tracker>
  </trackers>
</object-tracking>
```

Command Syntax

```
delay up <1-9999>
```

Configure tracker id

Use this attribute for Object Tracking id.

Attribute Name: tracker-id

Attribute Type: uint16

Attribute Name: delay-down

Attribute Type: uint16

Attribute Range: 1-9999

Netconf edit-config payload

```
<object-tracking xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-object-tracking">
  <trackers>
    <tracker>
      <tracker-id>1</tracker-id>
      <config>
        <tracker-id>1</tracker-id>
        <delay-down>1</delay-down>
      </config>
    </tracker>
  </trackers>
</object-tracking>
```

Command Syntax

```
delay down <1-9999>
```

Configure tracker id

Use this attribute for Object Tracking id.

Attribute Name: tracker-id

Attribute Type: uint16

Attribute Name: delay-up

Attribute Type: uint16

Attribute Range: 1-9999

Attribute Name: delay-down

Attribute Type: uint16

Attribute Range: 1-9999

Netconf edit-config payload

```
<object-tracking xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-object-tracking">
  <trackers>
    <tracker>
      <tracker-id>1</tracker-id>
      <config>
        <tracker-id>1</tracker-id>
        <delay-up>1</delay-up>
        <delay-down>1</delay-down>
      </config>
    </tracker>
  </trackers>
</object-tracking>
```

Command Syntax

```
delay up <1-9999> down <1-9999>
```

IPI-ELK

Configure password

Use this to configure ELK server password

Attribute Name: password

Attribute Type: string

Attribute Name: username

Attribute Type: string

Netconf edit-config payload

```
<elk xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-elk">
  <metricbeats>
    <metricbeat>
      <ip>A.B.C.D</ip>
      <config>
        <ip>A.B.C.D</ip>
        <username>USERNAME</username> <!-- operation="delete"-->
      </config>
      <password>PASSWORD</password> <!-- operation="delete"-->
    </metricbeat>
  </metricbeats>
</elk>
```

Command Syntax

```
elk server metricbeat A.B.C.D username USERNAME password PASSWORD
```

Configure certificate path

Used to configure Filebeat server path to certificate file

Attribute Name: certificate-path

Attribute Type: string

Netconf edit-config payload

```
<elk xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-elk">
  <filebeats>
    <filebeat>
      <ip>A.B.C.D</ip>
      <config>
        <ip>A.B.C.D</ip>
      </config>
      <certificate-path>FILE-PATH</certificate-path> <!-- operation="delete"-->
    </filebeat>
  </filebeats>
</elk>
```

Command Syntax

```
elk server filebeat A.B.C.D FILE-PATH
```

service enable metricbeat (vrf management|)

Attribute Name: vrf-name

Attribute Type: string

Netconf RPC payload

```
<elk-metricbeat-service-enable xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-  
elk">  
  <vrf-name>management</vrf-name>  
</elk-metricbeat-service-enable>
```

Command Syntax

```
service enable metricbeat (vrf management|)
```

service enable filebeat (vrf management|)

Attribute Name: vrf-name

Attribute Type: string

Netconf RPC payload

```
<elk-filebeat-service-enable xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-  
elk">  
  <vrf-name>management</vrf-name>  
</elk-filebeat-service-enable>
```

Command Syntax

```
service enable filebeat (vrf management|)
```

service disable metricbeat (vrf management|)

Attribute Name: vrf-name

Attribute Type: string

Netconf RPC payload

```
<elk-metricbeat-service-disable xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-  
elk">  
  <vrf-name>management</vrf-name>  
</elk-metricbeat-service-disable>
```

Command Syntax

```
service disable metricbeat (vrf management|)
```

service disable filebeat (vrf management|)

Attribute Name: vrf-name

Attribute Type: string

Netconf RPC payload

```
<elk-filebeat-service-disable xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-  
elk">  
  <vrf-name>management</vrf-name>  
</elk-filebeat-service-disable>
```

Command Syntax

```
service disable filebeat (vrf management|)
```

IPI-IPSEC

Configure name

IPsec transform-set name

This command is supported when following feature are enabled IPsec feature

Attribute Name: name

Attribute Type: string

Attribute Range: 1-127

Netconf edit-config payload

```
<ipsec xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ipsec">  
  <transform-sets>  
    <transform-set> <!-- operation="delete"-->  
      <name>NAME</name>  
      <config>  
        <name>NAME</name>  
      </config>  
    </transform-set>  
  </transform-sets>  
</ipsec>
```

Command Syntax

```
crypto ipsec transform-set NAME
```

Configure transform set mode

This attribute is used to configure mode for a transform-set.

This command is supported when following feature are enabled IPsec feature

Attribute Name: transform-set-mode

Attribute Type: enum (transport)

Default Value: transport

Netconf edit-config payload

```
<ipsec xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ipsec">
  <transform-sets>
    <transform-set>
      <name>NAME</name>
      <config>
        <name>NAME</name>
      </config>
      <transform-set-mode>transport</transform-set-mode> <!-- operation="delete"-->
    </transform-set>
  </transform-sets>
</ipsec>
```

Command Syntax

```
crypto ipsec transform-set NAME mode (transport)
```

Configure ah authentication

This attribute configures IPsec AH authentication type.

This command is supported when following feature are enabled IPsec feature

Attribute Name: ah-authentication

Attribute Type: enum (none|ah-md5|ah-sha1|ah-sha256|ah-sha384|ah-sha512)

Netconf edit-config payload

```
<ipsec xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ipsec">
  <transform-sets>
    <transform-set>
      <name>NAME</name>
      <config>
        <name>NAME</name>
      </config>
      <ah-auth>
        <config>
          <ah-authentication>none</ah-authentication>
        </config>
      </ah-auth>
    </transform-set>
  </transform-sets>
</ipsec>
```

Command Syntax

```
crypto ipsec transform-set NAME ah (none|ah-md5|ah-sha1|ah-sha256|ah-sha384|ah-
sha512)
```

Configure esp encryption

This attribute configures IPsec ESP encryption type.

This command is supported when following feature are enabled IPsec feature

Attribute Name: esp-encryption

Attribute Type: enum (esp-null|esp-3des|esp-cast|esp-blf|esp-blf192|esp-blf256|esp-aes|esp-aes192|esp-aes256)

Attribute Name: esp-authentication

Attribute Type: enum (none|esp-md5|esp-sha1|esp-sha256|esp-sha384|esp-sha512)

Netconf edit-config payload

```
<ipsec xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ipsec">
  <transform-sets>
    <transform-set>
      <name>NAME</name>
      <config>
        <name>NAME</name>
      </config>
    <esp-auth>
      <config>
        <esp-authentication>none</esp-authentication>
        <esp-encryption>esp-null</esp-encryption>
      </config>
    </esp-auth>
  </transform-set>
</transform-sets>
</ipsec>
```

Command Syntax

```
crypto ipsec transform-set NAME esp-auth (none|esp-md5|esp-sha1|esp-sha256|esp-
sha384|esp-sha512) esp-enc (esp-null|esp-3des|esp-cast|esp-blf|esp-blf192|esp-
blf256|esp-aes|esp-aes192|esp-aes256)
```

Configure esp authentication

This attribute configures IPsec ESP authentication type.

This command is supported when following feature are enabled IPsec feature

Attribute Name: esp-authentication

Attribute Type: enum (none|esp-md5|esp-sha1|esp-sha256|esp-sha384|esp-sha512)

Attribute Name: esp-encryption

Attribute Type: enum (esp-null|esp-3des|esp-cast|esp-blf|esp-blf192|esp-blf256|esp-aes|esp-aes192|esp-aes256)

Netconf edit-config payload

```
<ipsec xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ipsec">
  <transform-sets>
    <transform-set>
      <name>NAME</name>
      <config>
        <name>NAME</name>
      </config>
    <esp-auth>
      <config>
```

```
<esp-encryption>esp-null</esp-encryption>
<esp-authentication>none</esp-authentication>
</config>
</esp-auth>
</transform-set>
</transform-sets>
</ipsec>
```

Command Syntax

```
crypto ipsec transform-set NAME esp-auth (none|esp-md5|esp-sha1|esp-sha256|esp-
sha384|esp-sha512) esp-enc (esp-null|esp-3des|esp-cast|esp-blf|esp-blf192|esp-
blf256|esp-aes|esp-aes192|esp-aes256)
```

Configure name

IPsec Crypto Map name

This command is supported when following feature are enabled IPsec feature

Attribute Name: name

Attribute Type: string

Attribute Range: 1-127

Attribute Name: sa-type

Attribute Type: enum (ipsec-manual)

Netconf edit-config payload

```
<ipsec xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ipsec">
<crypto-maps>
<crypto-map> <!-- operation="delete"-->
  <name>MAP-NAME</name>
  <config>
    <name>WORD</name>
    <sa-type>ipsec-manual</sa-type>
  </config>
</crypto-map>
</crypto-maps>
</ipsec>
```

Command Syntax

```
crypto map MAP-NAME (ipsec-manual)
```

Configure sequence id

Map sequence-id

This command is supported when following feature are enabled IPsec feature

Attribute Name: sequence-id

Attribute Type: uint16

Attribute Range: 1-65535

Netconf edit-config payload

```

<ipsec xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ipsec">
  <crypto-maps>
    <crypto-map>
      <name>MAP-NAME</name>
      <config>
        <name>WORD</name>
      </config>
    </crypto-map>
  </crypto-maps>
  <sessions>
    <session> <!-- operation="delete"-->
      <sequence-id>1</sequence-id>
      <config>
        <sequence-id>1</sequence-id>
      </config>
    </session>
  </sessions>
</ipsec>

```

Command Syntax

```
sequence <1-65535>
```

Configure transform set name

Map session transform-set name

This command is supported when following feature are enabled IPsec feature

Attribute Name: transform-set-name

Attribute Type: string

Attribute Range: 1-127

Netconf edit-config payload

```

<ipsec xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ipsec">
  <crypto-maps>
    <crypto-map>
      <name>MAP-NAME</name>
      <config>
        <name>WORD</name>
      </config>
    </crypto-map>
  </crypto-maps>
  <sessions>
    <session>
      <sequence-id>1</sequence-id>
      <config>
        <sequence-id>1</sequence-id>
      </config>
      <transform-sets>
        <transform-set> <!-- operation="delete"-->
          <transform-set-name>NAME</transform-set-name>
        </transform-set>
      </transform-sets>
    </session>
  </sessions>
</ipsec>

```

```

    <config>
      <transform-set-name>WORD</transform-set-name>
    </config>
  </transform-set>
</transform-sets>
</session>
</sessions>
</crypto-map>
</crypto-maps>
</ipsec>

```

Command Syntax

```
set transform-set NAME
```

Configure peer

Map session peer IP address

This command is supported when following feature are enabled IPsec feature

Attribute Name: peer

Attribute Type: inet:ip-address

Attribute Name: spi

Attribute Type: uint16

Netconf edit-config payload

```

<ipsec xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ipsec">
  <crypto-maps>
    <crypto-map>
      <name>MAP-NAME</name>
      <config>
        <name>WORD</name>
      </config>
    </sessions>
    <session>
      <sequence-id>1</sequence-id>
      <config>
        <sequence-id>1</sequence-id>
      </config>
      <peer-addresses>
        <peer-address> <!-- operation="delete"-->
          <peer>A.B.C.D</peer>
          <config>
            <peer>CML_IP_ADDR_T</peer>
            <spi>0</spi>
          </config>
        </peer-address>
      </peer-addresses>
    </session>
  </sessions>

```

```

</crypto-map>
</crypto-maps>
</ipsec>

```

Command Syntax

```
set peer (A.B.C.D|X:X::X:X) (spi <0-4096>|)
```

Configure security parameter index

Crypto Map session key security parameter index (SPI)

This command is supported when following feature are enabled IPsec feature

Attribute Name: security-parameter-index

Attribute Type: uint16

Attribute Range: 0-4096

Attribute Name: cipher

Attribute Type: string

Attribute Range: 1-128

Attribute Name: authentication-key

Attribute Type: string

Attribute Range: 1-128

Netconf edit-config payload

```

<ipsec xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ipsec">
  <crypto-maps>
    <crypto-map>
      <name>MAP-NAME</name>
      <config>
        <name>WORD</name>
      </config>
    </crypto-map>
  </crypto-maps>
  <sessions>
    <session>
      <sequence-id>1</sequence-id>
      <config>
        <sequence-id>1</sequence-id>
      </config>
      <session-keys>
        <session-key> <!-- operation="delete"-->
          <security-parameter-index>0</security-parameter-index>
          <config>
            <security-parameter-index>0</security-parameter-index>
            <protocol>esp</protocol>
            <direction>inbound</direction>
            <cipher>HEX-KEY-DATA</cipher>
            <authentication-key>HEX-KEY-DATA</authentication-key>
          </config>
          <protocol>esp</protocol>
        </session-key>
      </session-keys>
    </session>
  </sessions>
</ipsec>

```

```
        <direction>inbound</direction>
    </session-key>
</session-keys>
</session>
</sessions>
</crypto-map>
</crypto-maps>
</ipsec>
```

Command Syntax

```
set session-key (inbound|outbound) (esp) <0-4096> cipher HEX-KEY-DATA authenticator
HEX-KEY-DATA
```

IPI-HOST

Configure disable service advanced vty

Use this attribute to enable advanced mode vty interface.

Attribute Name: disable-service-advanced-vty

Attribute Type: uint8

Netconf edit-config payload

```
<system-host xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-host">
  <config>
    </disable-service-advanced-vty><!-- operation="delete"-->
  </config>
</system-host>
```

Command Syntax

```
no service advanced-vty
```

Configure service passwd encryption

Use this attribute to enable password encryption.

Attribute Name: service-passwd-encryption

Attribute Type: boolean

Netconf edit-config payload

```
<system-host xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-host">
  <config>
    <service-passwd-encryption>true</service-passwd-encryption> <!--
operation="delete"-->
  </config>
</system-host>
```

Command Syntax

```
service password-encryption
```

Configure service passwd encryption

Use this attribute to enable password encryption.

Attribute Name: service-passwd-encryption

Attribute Type: boolean

Netconf edit-config payload

```
<system-host xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-host">
  <config>
    <service-passwd-encryption>true</service-passwd-encryption> <!--
operation="delete"-->
  </config>
</system-host>
```

Command Syntax

```
no service password-encryption
```

Configure passwd encrypted

Use this attribute to provide encrypted password.

Attribute Name: passwd-encrypted

Attribute Type: uint8

Attribute Name: system-enable-passwd

Attribute Type: string

Netconf edit-config payload

```
<system-host xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-host">
  <config>
    <system-enable-passwd>LINE</system-enable-passwd> <!-- operation="delete"-->
    </passwd-encrypted><!-- operation="delete"-->
  </config>
</system-host>
```

Command Syntax

```
enable password (8|) LINE
```

Configure banner motd

Use this attribute to set the login banner for the OcNOS device.

This command is supported when following feature are enabled IMI feature

Attribute Name: banner-motd

Attribute Type: union

Netconf edit-config payload

```
<system-host xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-host">
  <config>
    <banner-motd>CML_BANNER_T</banner-motd>
  </config>
</system-host>
```

Command Syntax

```
banner motd (LINE|default)
```

Configure service term length

Use this attribute to set system wide terminal length.

This command is supported when following feature are enabled IMI feature

Attribute Name: service-term-length

Attribute Type: uint16

Attribute Range: 0-512

Netconf edit-config payload

```
<system-host xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-host">
  <config>
    <service-term-length>0</service-term-length> <!-- operation="delete"-->
  </config>
</system-host>
```

Command Syntax

```
service terminal-length <0-512>
```
